MAINTENANCE MANUAL

1st Edition

Serial No. 2000001 and Higher (ALL MODELS)

⚠WARNING

This manual is intended for qualified service personnel only.
To reduce the risk of electric shock, fire or injury, do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so. Refer all servicing to qualified service personnel.

⚠WARNUNG

Die Anleitung ist nur für qualifiziertes Fachpersonal bestimmt.
Alle Wartungsarbeiten dürfen nur von qualifiziertem Fachpersonal ausgeführt werden. Um die Gefahr eines elektrischen Schlages, Feuergefahr und Verletzungen zu vermeiden, sind bei Wartungsarbeiten strikt die Angaben in der Anleitung zu befolgen. Andere als die angegeben Wartungsarbeiten dürfen nur von Personen ausgeführt werden, die eine spezielle Befähigung dazu besitzen.

⚠ AVERTISSEMENT

Ce manual est destiné uniquement aux personnes compétentes en charge de l'entretien. Afin de réduire les risques de décharge électrique, d'incendie ou de blessure n'effectuer que les réparations indiquées dans le mode d'emploi à moins d'être qualifié pour en effectuer d'autres. Pour toute réparation faire appel à une personne compétente uniquement.

WARNING!!

AN INSULATED TRANSFORMER SHOULD BE USED DURING ANY SERVICE TO AVOID POSSIBLE SHOCK HAZARD, BECAUSE OF LIVE CHASSIS.
THE CHASSIS OF THIS RECEIVER IS DIRECTLY CONNECTED TO THE AC POWER LINE.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY A ⚠ MARK ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL TO SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

ATTENTION!!

AFIN D'ÉVITER TOUT RISQUE D'ÉLECTROCUTION PROVENANT D'UN CHÂSSIS SOUS TENSION, UN TRANSFORMATEUR D'ISOLEMENT DOIT ETRE UTILISÉ LORS DE TOUT DÉPANNAGE.
LE CHÂSSIS DE CE RÉCEPTEUR EST DIRECTEMENT RACCORDÉ Á L'ALIMENTATION SECTEUR.

ATTENTION AUX COMPOSANTS RELATIFS Á LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE MAPQUE ⚠ SUR LES SCHÉMAS DE PRINCIPE, LES VUES EXPLOSÉES ET LES LISTES DE PIECES SONT D'UNE IMPORTANCE CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT. NE LES REMPLACER QUE PAR DES COMPOSANTS SONY DONT LE NUMÉRO DE PIÈCE EST INDIQUÉ DANS LE PRÉSENT MANUEL OU DANS DES SUPPLÉMENTS PUBLIÉS PAR SONY. LES RÉGLAGES DE CIRCUIT DONT L'IMPORTANCE EST CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT SONT IDENTIFIÉS DANS LE PRÉSENT MANUEL. SUIVRE CES PROCÉDURES LORS DE CHAQUE REMPLACEMENT DE COMPOSANTS CRITIQUES, OU LORSQU'UN MAUVAIS FONCTIONNEMENT EST SUSPECTÉ.

OPERATION MANUAL Japanese/English
1st Edition
Serial No. 2000001 and Higher

Section 1
Operating Instructions

This section is extracted from operation manual.

WARNING

To prevent fire or shock hazard, do not expose the unit to rain or moisture.

To avoid electrical shock, do not open the cabinet. Refer servicing to qualified personnel only.

AVERTISSEMENT

Afin d'éviter tout risque d'incendie ou d'électrocution, ne pas exposer cet appareil à la pluie ou à l'humidité.

Afin d'écarter tout risque d'électrocution, garder le coffret fermé. Ne confier l'entretien de l'appareil qu'à un personnel qualifié.

WARNUNG

Um Feuergefahr und die Gefahr eines elektrischen Schlages zu vermeiden, darf das Gerät weder Regen noch Feuchtigkeit ausgesetzt werden.

Um einen elektrischen Schlag zu vermeiden, darf das Gehäuse nicht geöffnet werden. Überlassen Sie Wartungsarbeiten stets nur einem Fachmann.

ADVERTENCIA

Para evitar incendios o el riesgo de electrocución, no exponga la unidad a la lluvia ni a la humedad.

Para evitar descargas eléctricas, no abra la unidad. En caso de avería, solicite los servicios de personal cualificado.

ATTENZIONE

Per evitare incendi o cortocircuiti, l'apparecchio non deve essere esposto alla pioggia o all'umidità.

Per evitare scosse elettriche, non aprite l'apparecchio. Per le riparazioni rivolgetevi solo a personale qualificato.

CAUTION:
Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

ATTENTION
Il y a un risque d'explosion si la pile est mal insérée. Remplacer la pile uniquement par une pile de même type ou de type équivalent recommandé par le fabricant. Jeter les piles usées conformément aux instructions du fabricant.

VORSICHT:
Es besteht Explosionsgefahr, wenn die Batterie inkorrekt eingelegt wird.
Es darf nur eine identische oder eine vom Hersteller empfohlene Batterie des gleichen Typs eingesetzt werden. Entladene Batterien sind nach den Anweisungen des Herstellers zu entsorgen.

PRECAUCION
Peligro de explosión en caso de haberse instalado incorrectamente la betería.
Cambie sólo por una del mismo tipo o especificaciones equivalentes, de entre las recomendadas por el fabricante. Las baterías viejas se deben eliminar siguiendo las instrucciones del fabricante.

ATTENZIONE:
Pericolo di esplosione se la pila viene sostituita scorrettamente.
Sostituirla solo con un'altra uguale o di un tipo equivalente consigliato dal fabbricante. Gettare via le pile usate secondo le istruzioni del fabbricante.

Note
The socket-outlet should be installed near the equipment and be easily accessible.

Remarque
La prise doit être près de l'appareil et facile d'accès.

Hinweis
Zur Trennung vom Netz ist der Netzstecker aus der Steckdose zu ziehen, welche sich in der Nähe des Gerätes befinden muß und leicht zugänglich sein soll.

Nota
La toma mural debe estar instalada cerca del equipo y debe accederse a ésta con facilidad.

Nota
La presa di corrente deve essere situata vicino all'apparecchio e deve essere facilmente accessibile.

For customers in the USA
(BVM-D9H1U/D9H5U, BVM-D14H1U/D14H5U)
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

The shielded interface cable recommended in this manual must be used with this equipment in order to comply with the limits for a digital device pursuant to Subpart B of Part 15 of FCC Rules.

Für Kunden in Deutschland
Entsorgungshinweis: Bitte werfen Sie nur entladene Batterien in die Sammelboxen beim Handel oder den Kommunen. Entladen sind Batterien in der Regel dann, wenn das Gerät abschaltet und signalisiert "Batterie leer" oder nach längerer Gebrauchsdauer der Batterien "nicht mehr einwandfrei funktioniert". Um sicherzugehen, kleben Sie die Batteriepole z.B. mit einem Klebestreifen ab oder geben Sie die Batterien einzeln in einen Plastikbeutel.

Voor de klanten in Nederland

Bij dit produkt zijn batterijen geleverd. Wanneer deze leeg zijn, moet u ze niet weggooien maar inleveren als KCA.

- Dit apparaat bevat een Li-ion batterij voor memory back-up.
- De batterij voor memory back-up is vastgesoldeerd op de MA printplaat BT1.
- Raadpleeg uw leverancier over de verwijdering van de batterij op het moment dat u het apparaat bij einde levensduur afdankt.
- Gooi de batterij niet weg, maar lever hem in als KCA.

För kunderna i Sverige
Apparaten ma kun tilkoples jordet stikkontakt

For kunder i Norge
Apparatet må kun tilkoples jordet stikkontakt

For the customers in Europe
(BVM-D9H1E/D9H1A/D9H5E/D9H5A, BVM-D14H1E/D14H1A/D14H5E/D14H5A)
This product with the CE marking complies with both the EMC Directive (89/336/EEC) and the Low Voltage Directive (73/23/EEC) issued by the Commission of the European Community.
Compliance with these directives implies conformity to the following European standards:
- EN60950: Product Safety
- EN55103-1: Electromagnetic Interference (Emission)
- EN55103-2: Electromagnetic Susceptibility (Immunity)

This product is intended for use in the following Electromagnetic Environment(s):
E1 (residential), E2 (commercial and light industrial), E3 (urban outdoors) and E4 (controlled EMC environment, ex. TV studio).

Pour les clients européens
(BVM-D9H1E/D9H1A/D9H5E/D9H5A, BVM-D14H1E/D14H1A/D14H5E/D14H5A)
Ce produit portant la marque CE est conforme à la fois à la Directive sur la compatibilité électromagnétique (EMC) (89/336/CEE) et à la Directive sur les basses tensions (73/23/CEE) émises par la Commission de la Communauté européenne.
La conformité à ces directives implique la conformité aux normes européennes suivantes:
- EN60950: Sécurité des produits
- EN55103-1: Interférences électromagnétiques (émission)
- EN55103-2: Sensibilité électromagnétique (immunité)

Ce produit est prévu pour être utilisé dans les environnements électromagnétiques suivants:
E1 (résidentiel), E2 (commercial et industrie légère), E3 (urbain extérieur) et E4 (environnement EMC contrôlé ex. studio de télévision).

Für Kunden in Europa
(BVM-D9H1E/D9H1A/D9H5E/D9H5A, BVM-D14H1E/D14H1A/D14H5E/D14H5A)
Dieses Produkt besitzt die CE-Kennzeichnung und erfüllt sowohl die EMV-Direktive (89/336/EEC) als auch die Direktive Niederspannung (73/23/EEC) der EG-Kommission.
Die Erfüllung dieser Direktiven bedeutet Konformität für die folgenden Europäischen Normen:
- EN60950: Produktsicherheit
- EN55103-1: Elektromagnetische Interferenz (Emission)
- EN55103-2: Elektromagnetische Empfindlichkeit (Immunität)

Dieses Produkt ist für den Einsatz unter folgenden elektromagnetischen Bedingungen ausgelegt:
E1 (Wohnbereich), E2 (kommerzieller und in beschränktem Maße industrieller Bereich), E3 (Stadtbereich im Freien) und E4 (kontrollierter EMV-Bereich, z.B. Fernsehstudio)

ATTENTION - When the product is installed in a rack:

a) Elevated operating ambient temperature
If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the manufacture's maximum rated ambient temperature (Tmra: 0°C to 35°C (32°F to 95°F)).

b) Reduced air flow
Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

c) Mechanical loading
Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.

d) Circuit overloading
Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of circuits might have on overcurrent protection and supply wiring.
Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

e) Reliable earthing
Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g., use of power strips).

f) Gap keeping
Upper and lower gap of rack-mounted equipment should be kept at least 44 mm (1 ¾ inches).

For the customers in the United Kingdom (BVM-D9H1E/D9H1A/D9H5E/D9H5A, BVM-D14H1E/D14H1A/D14H5E/D14H5A)

WARNING
THIS APPARATUS MUST BE EARTHED

IMPORTANT
The wires in this mains lead are coloured in accordance with the following code:

Green-and-yellow:	Earth
Blue:	Neutral
Brown:	Live

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows:
The wire which is coloured green-and-yellow must be connected to the terminal in the plug which is marked by the letter E or by the safety earth symbol ⏚ or coloured green or green-and-yellow.
The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.
The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.

Ensure that your equipment is connected correctly - if you are in any doubt consult a qualified electrician.

Achtung - bei Installation des Geräts in einem Gestell:

a) Erhöhte Umgebungstemperatur bei Betrieb
Wird das Gerät in einem geschlossenen Gestell oder einem Gestell mit mehreren anderen Geräten installiert, kann die Umgebungstemperatur um das Gestell höher sein als die normale Umgebungstemperatur im Raum. Achten Sie daher bitte besonders darauf, das Gerät in einer Umgebung zu installieren, in der die Temperatur nicht über die vom Hersteller angegebene Umgebungstemperatur von 0 bis
35 °C (32 °F bis 95 °F) ansteigt (Tmra).

b) Reduzierte Belüftung
Das Gerät muß so im Gestell installiert werden, daß eine Belüftung gewährleistet ist, die für den sicheren Betrieb des Geräts erforderlich ist.

c) Mechanische Belastung
Das Gerät muß so im Gestell installiert werden, daß nicht durch eine ungleichmäßige mechanische Belastung Unfallgefahr entsteht.

d) Überlastung der Stromkreise
Der Anschluß des Geräts an das Versorgungsnetz erfordert sorgfältige Planung. Bitte beachten Sie insbesondere die Auswirkungen, die eine Überlastung der Stromkreise im Hinblick auf den Überspannungsschutz und die physischen Komponenten des Versorgungsnetzes haben kann.
Beachten Sie in diesem Zusammenhang unbedingt die Angaben auf dem Typenschild am Gerät.

e) Zuverlässige Erdung
Geräte, die in einem Gestell installiert werden, benötigen eine zuverlässige Erdung. Achten Sie insbesondere auf Anschlüsse an das Versorgungsnetz, die nicht direkt an einen Abzweigstromkreis, sondern indirekt, zum Beispiel über Verlängerungskabel, erfolgen.

f) Erforderliche Abstände
Halten Sie zur Ober- und Unterseite eines in einem Gestell installierten Geräts einen Abstand von 44 mm (1 ¾ inches) ein.

Chapter 1 Overview

Chapter 2 Menu

(Continued)

Table of contens

Precautions

On safety

- Operate the unit only with a power source as specified in “Specifications” section.
- The nameplate indicating operating voltage, power consumption, etc., is located at the rear.
- Should any solid object or liquid fall into the cabinet, unplug the unit and have it checked by qualified personnel before operating it any further.
- Do not drop or place heavy objects on the power cord. If the power cord is damaged, turn off the power immediately. It is dangerous to use the unit with a damaged power cord.
- Unplug the unit from the wall outlet if it is not to be used for several days or more.
- Disconnect the power cord from the AC outlet by grasping the plug, not by pulling the cord.
- The socket-outlet shall be installed near the equipment and shall be easily accessible.
- Use the supplied AC adaptor for the BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A models only. It is dangerous to use the AC adaptor for models other than these.

On installation

- Allow adequate air circulation to prevent internal heat build-up.
  Do not place the unit on surfaces (rugs, blankets, etc.) or near materials (curtains, draperies) that may block the ventilation holes.
- Do not install the unit in a location near heat sources such as radiators or air ducts, or in a place subject to direct sunlight, excessive dust, mechanical vibration or shock.

On mounting the rack

When the monitor is mounted on the rack, the proximity of other equipment or a decrease in air circulation may cause heat to build up inside the monitor. Therefore, when mounting the monitor on the rack, ensure there is an adequate opening for ventilation or install a fan. The following operating conditions are needed:
Temperature: 0°C to 35°C (32°F to 95°F),
Optimum temperature: 20°C to 30°C (68°F to 86°F)

On the battery (BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A only)

The MAIN POWER switch is not supplied with the above models. Therefore, when the power is turned off with a battery installed, the monitor is set to standby mode and a small amount of power is consumed. When the monitor is not used for a long period, remove the battery.

On cleaning

To keep the unit looking brand-new, periodically clean it with a mild detergent solution. Never use strong solvents such as thinner or benzine, or abrasive cleansers since they will damage the cabinet. As a safety precaution, unplug the unit before cleaning it.

On repacking

Do not throw away the carton and packing materials. They make an ideal container which to transport the unit.
If you have any questions about this unit, contact your authorized Sony dealer.

On magnetism

- Do not place the unit near any objects or pieces of equipment which generate magnetism, such as magnets, speakers, electric clocks, toys using magnets, health appliances, etc. Magnetism will cause picture bounce, oscillations or picture discoloration.
- Also, the picture may become fuzzy or the colors may not reproduce correctly due to earth magnetism. This depends on direction that the unit is installed. This is not equipment failure. In such a case, simply degauss the unit.

On the CRT

- Dust accumulates on the CRT easily. Clean the CRT when necessary with a soft cloth.
  The surface of the CRT is easily scratched; therefore, do not rub or touch the surface of the CRT unnecessarily since this may result in a scratched picture tube.
- If you touch the surface of the CRT, you may feel a weak electrical shock. This is simply static electricity that is generated on the surface of the CRT. It will not affect the human body.

On using as the monitor for 4:3 signals

The 16:9 mask is installed at the factory. When the display is set to the 4:3 aspect ratio, the upper and lower portions of the display are masked and you cannot view the upper and lower portions of the picture. Therefore, when you want to display the picture in 4:3 aspect ratio, install the supplied 4:3 mask.

Overview

The BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A are 9 -inch Trinitoron®[1] Color Monitors. The BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A are 14-inch[2] Trinitoron® Color Monitors.

Features

Multiformat

The monitor supports the principal format (480I/480P/720P/1080I) for the digital broadcasts, NTSC and PAL color systems, and a wide variety of signals[3] whose horizontal frequency is between 15 kHz and 45 kHz.

High resolution picture tube

The HR Trinitron picture tube produces a clear, high resolution image.

Model	Aperture grille pitch	Resolution at the center of the picture
BVM-D9H1U/ D9H1E/D9H1A/ D9H5U/D9H5E/ D9H5A	0.25 mm	450 TV lines (4:3) 340 TV lines (16:9)
BVM-D14H1U/ D14H1E/D14H1A/ D14H5U/D14H5E/ D14H5A	0.25 mm	800 TV lines (4:3) 600 TV lines (16:9)

Separate control unit (BVM-D9H1U/D9H1E/D9H1A/D14H1U/D14H1E/D14H1A)

Using a separate control unit reduces the space needed for the equipment.
The monitor is controlled by a separate control unit, such as an optional BKM-10R/11R Monitor Control Unit or by daisy chain connections.

Controlling monitor groups

Up to 32 monitors can be controlled from one control unit by the RS-485 serial remote connections. You can control individual monitors or monitor groups simply by entering monitor address or group numbers. You can also execute the same operation on all connected monitors, or put all connected monitors into the same setup and adjustment state.

Auto chroma phase and white balance functions

The chroma and phase of the decoder are automatically adjusted with the auto chroma phase function and the color temperature is automatically adjusted with the auto white balance function by using the BKM-14L Auto Setup Probe, etc.

4:3 area marker

It is possible to check the 4:3 aspect area in the 16:9 picture by displaying the 4:3 marker.

Expandable input capability

You can obtain HD SDI signals, D1 SDI signals, NTSC/PAL signals or YP_BP_R/RGB signals by installing the optional input adaptors at the rear of the monitor. The input connector configuration can be easily modified and up to three adaptors can be installed. The BKM-129X Analog Component Input Adaptor is installed at SLOT 1 at the factory.

Stable color temperature

The beam current feedback circuit maintains a constant color temperature over long periods of time.

Blue-only mode convenient for monitoring noise

All three CRT cathodes can be driven with a blue signal, producing a monochrome display. This mode is convenient for chroma and phase adjustment, and for monitoring VTR noise.

1) Trinitron® is a registered trademark of Sony Corporation.
2) 9-inch and 14-inch refer to the CRT size of the monitor. For effective picture size, see "Specifications" on page 47(E).
3) For details on the signal format, see "Available Signal Format" on page 53(E).

Other features

- The monitor's various functions and operating conditions can be set with on-screen menus.
- Has both RS-485 serial remote and relay contact parallel remote control connectors.
- H delay and V delay functions for simultaneous checking of the horizontal and vertical synchronization signals. VITS (Vertical Interval Test Signal) checking is also possible.
- Auto and manual degaussing.
- The monitor may be mounted in an EIA-standard 19-inch rack, using an optional MB-520 (for 9-inch monitor) or BKM-30E14/31E14 (for 14-inch monitor) Rack Mount Kit.
- The appearance of the monitor can be changed to 16:9 or 4:3 display by the replacement of a mask.
- Operable by using a Sony lithium ion battery (BP-L60/L90A) or DC 12 V external power source. (BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A only)
- Built-in audio reproduce circuit and speaker. (BVM-D9H5U/D9H5E/D9H5A only)

Options

For external control

BKM-10R Monitor Control Unit

A controller for the BVM-D9H/D14H series video monitors, allowing you to control multiple monitors from one control unit.

BKM-11R Monitor Control Unit

A controller for the BVM-D9H/D14H and other BVM/HDM series video monitors, allowing you to control multiple monitors from one control unit.

BKM-14L Auto Setup Probe

A probe, allowing the automatic adjustment of this monitor's color temperature.

For installation

MB-520 Mounting Bracket

Mounting bracket to mount one or two BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A in a 19-inch EIA standard rack.

MB-519 Mounting Panel

Panel for the BVM-D9H1U/D9H1E/D9H1A to fill up the space created when mounting a video monitor to a rack with the MB-520 mounting bracket.

MB-509 Mounting Panel

Panel for the BVM-D9H5U/D9H5E/D9H5A to fill up the space created when mounting a video monitor to a rack with the MB-520 mounting bracket.

BKM-30E14 Rack Mount Kit

Rack mount kit for mounting the BVM-D14H5U/D14H5E/D14H5A in an EIA standard 19-inch rack.

BKM-31E14 Rack Mount Kit

Rack mount kit for mounting the BVM-D14H1U/D14H1E/D14H1A in an EIA standard 19-inch rack.

Others

VF-508 Monitor ENG Kit

Kit that includes a light intercepting hood which is mounted on the front of a monitor, and a connector protector which is mounted on the rear.

Input adaptors

The input connector panel is configured by sliding the optional input adaptor into the input option slot at the rear of the monitor. Up to three adaptors can be installed to the monitor.
The input signal type for each connector of the adaptor is set with the INPUT CONFIG menu, in accordance with the configuration of the connector panel.

Note

When installing the adaptor, be sure to perform the necessary input signal setup with the INPUT CONFIG menu. If the setup is not performed, the adaptors may not function correctly.

For information about the INPUT CONFIG menu, see "C Setting the Input Configuration — INPUT CONFIG Menu" on page 35(E).

Overview

BKM-120D SDI 4:2:2 Input Adaptor
Includes a decoder for serial digital component signals. D1 SDI input/output connectors for two serial digital channels and active loop-through output connectors.

BKM-127W NTSC/PAL Input Adaptor
Includes decoders for analog composite NTSC and PAL signals. Input/output connectors for two analog channels and one YC channel.

BKM-129X Analog Component Input Adaptor
Includes input/output connectors for one analog channel and EXT SYNC input/output connectors.

The BKM-129X is mounted to the monitor at the factory.

BKM-142HD HD SDI Input Adaptor
Includes a decoder for HD serial digital signals and input/output connectors for two serial digital signal channels and monitor output connector.

Notes

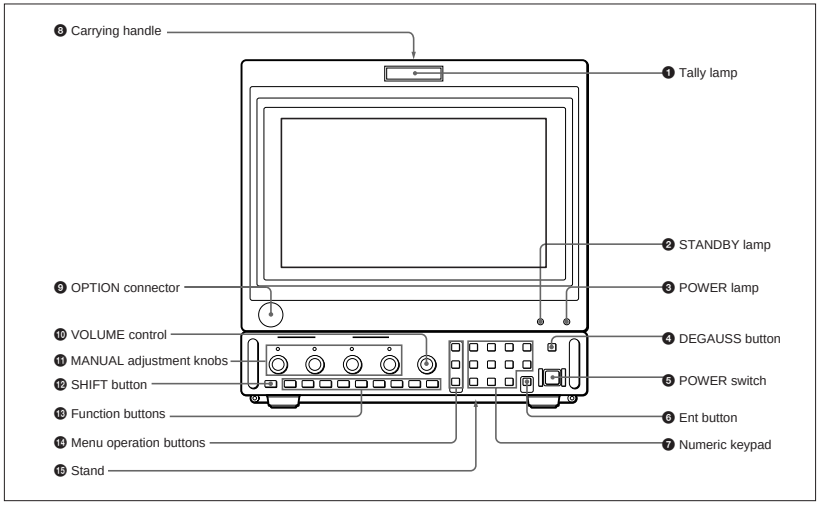
- The BKM-142HD uses two input option slots.
- The signal from MONITOR OUT connector does not satisfy the ON-LINE signal specifications.

Location and Function of Parts

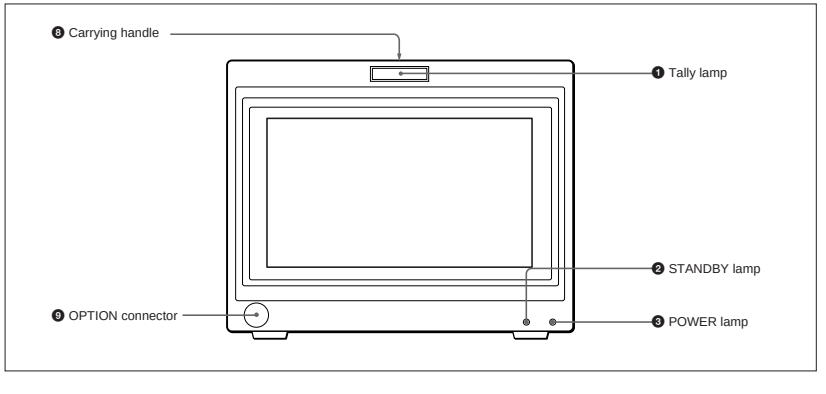
BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A Front Panel

For the BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A, see pages 16(E) to 20(E).

BVM-D9H1U/D9H1E/D9H1A



BVM-D9H5U/D9H5E/D9H5A



Location and Function of Parts

This manual explains the location and function of parts and controls of the BVM-D9H5U/D9H5E/D9H5A. The explanation also applies to the optional BKM-10R/11R Monitor Control Unit.

❶ Tally lamp
With factory settings, the tally lamp lights as follows when the pins of the PARALLEL REMOTE [1] connector on the rear panel are shorted:
– in red, when pins No.3 and No.9 are shorted.
– in green, when pins No.4 and No.9 are shorted.
– in amber, when pins No.3, No.4 and No.9 are shorted.

The tally lamp lights as follows when the pins of the PARALLEL REMOTE [2] connector on the rear panel are shorted:
– in red, when pins No.3 and No.5 are shorted.
– in green, when pins No.4 and No.5 are shorted.
– in amber, when pins No.3, No.4 and No.5 are shorted.

By changing the setting in the REMOTE menu, different pins on the remote connector can be used to control the tally lamp.

For information about the REMOTE menu, see "[D] Assigning the Remote Control Functions — REMOTE Menu" on page 37(E).

❷ STANDBY lamp
Lights when the monitor is in standby mode. The monitor will be in standby mode under the following conditions:
• The AC adaptor or battery is attached to the monitor when the STANDBY MODE menu of the SYSTEM CONFIG menu is set to ON.
• The monitor is changed from operation mode to standby mode by external control.

For information about the SYSTEM CONFIG menu, see "[E] Setting the Power-Up Conditions and Data about the Screen Display — SYSTEM CONFIG Menu" on page 39(E).

❸ POWER lamp
Lights when the monitor is put into operation mode from standby mode (see STANDBY lamp ❷) by pressing the POWER switch ❺.

Note
When the STANDBY lamp ❷ is blinking, the monitor cannot be put into operation mode (internal data initialization is taking place). Wait until the STANDBY lamp ❷ is steadily lit.

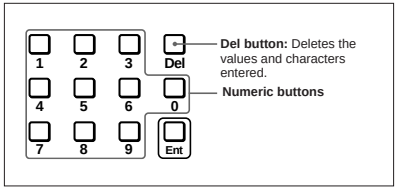
❹ DEGAUSS button
Press to degauss the CRT (every time the monitor is turned on, the CRT is degaussed automatically). To degauss again, wait for more than five minutes.

❺ POWER switch
Press to turn on/off the monitor. By setting with the ADDRESS menu, it is possible to turn on/off the power of the specified monitors only, or of all monitors at the same time.

For information about the ADDRESS menu, see "Selecting the Monitor to Control — ADDRESS Menu" on page 45(E).

❻ Ent button
Use to confirm the items, values and characters entered.

❼ Numeric keypad
Use to designate the channel number for the input signal to be monitored, or to enter the setting values with the menus.



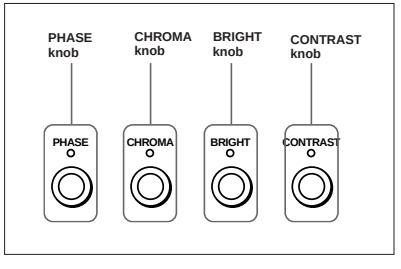
❽ Carrying handle
Pull out to use for carrying the monitor.

❾ OPTION connector
Used to connect the BKM-11R Monitor Control Unit or Auto Setup Probe (BKM-14L, etc.)

❿ VOLUME control
Adjusts the volume of the audio signals from the equipment connected to the AUDIO IN jacks at the rear of the monitor.

⓫ MANUAL adjustment knobs
Each press of one of these knobs turns the knob's green LED on or off. When the corresponding knob is on (lit), it is possible to manually adjust the contrast, brightness, chroma and phase by turning the corresponding knobs. The PHASE knob is also used to select the items or enter the setting values with the menus. It is possible to set the preset value for each adjusting item with the CONTROL PRESET ADJ menu.

For Information about the CONTROL PRESET ADJ menu, see "[A] Preset Adjustment of the Picture Level Control Knobs — CONTROL PRESET ADJ menu" on page 31(E).



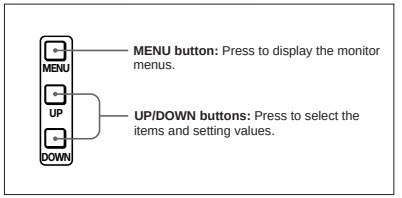
Note
The PHASE and CHROMA knobs may not be adjusted due to the signals. However, these knobs are used for selecting the items or entering the setting values with the menus.

⓬ SHIFT button
Press to select one of the two functions designated to the function buttons ⓭.
Each time the SHIFT button is pressed, the LED turns on (SHIFT ON: lits in umber) and off (SHIFT OFF.)
SHIFT OFF: The functions indicated above the function buttons can be used (the LED of the function button lits in green.)
SHIFT ON: The functions indicated below the function buttons can be used (the LED of the function button lits in amber.)

⓭ Function buttons
Change the operation conditions for the monitor. Each time the button is pressed, the LED turns on and turns off, and the operation conditions are changed. Each button has two functions. Select one of the two functions by pressing the SHIFT button ⓬. When the SHIFT button is set to ON, the LED lights in umber, and when the SHIFT button is set to OFF, the LED of each button lights in green.

For the functions of the function buttons in case of SHIFT OFF and SHIFT ON, see pages 10(E) and 11(E).

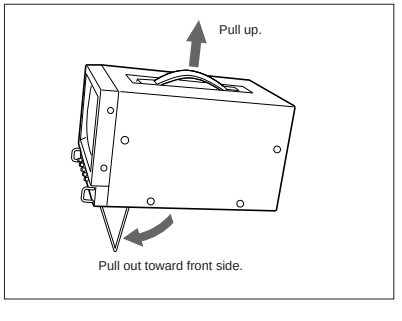
⓮ Menu operation buttons



For more information about menu operation, see "Basic Menu Operations" on page 25(E).

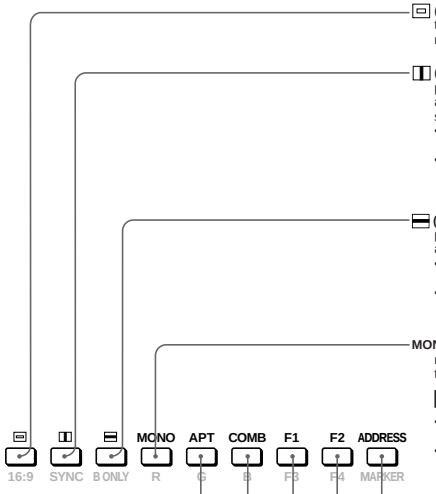
⓯ Stand
Pull out to use.

Using the Carrying Handle and Stand



Location and Function of Parts

Function buttons in SHIFT OFF mode (LEDs of function buttons in green)



(Underscan) button: When this button is pushed in (ON), the picture is underscanned by 3%, and four ends of the raster is displayed on the screen.

(H delay) button: When this button is pushed in (ON), the picture moves horizontally, and a horizontal sync signal appears approximately one quarter in the left edge of the screen.
- The brightness of the picture increases automatically, and it makes it easy to check the sync part.
- If it is pressed together with the button, a pulse cross picture is displayed.

(V delay) button: When this button is pushed in (ON), the picture moves vertically, and a vertical sync signal appears approximately in the center of the screen.
- The brightness of the picture increases automatically, and it makes it easy to check the sync part.
- If it is pressed together with button, a pulse cross picture is displayed.

MONO button: When this button is pushed in (ON), a monochrome picture is displayed. When the buttons is off, the monitor switches automatically color mode.

Notes
- The MONO button does not function with the RGB signal input.
- When the NTSC or PAL color signals are received and color burst signals are not input, the monitor does not switch to color mode.

ADDRESS button: When this button is pushed in (ON), the ADDRESS menu appears on the screen. By using the ADDRESS menu, operation conditions for multiple monitors are set.
For more information about the ADDRESS menu, see "Selecting the Monitor to Control — ADDRESS Menu" on page 45(E).

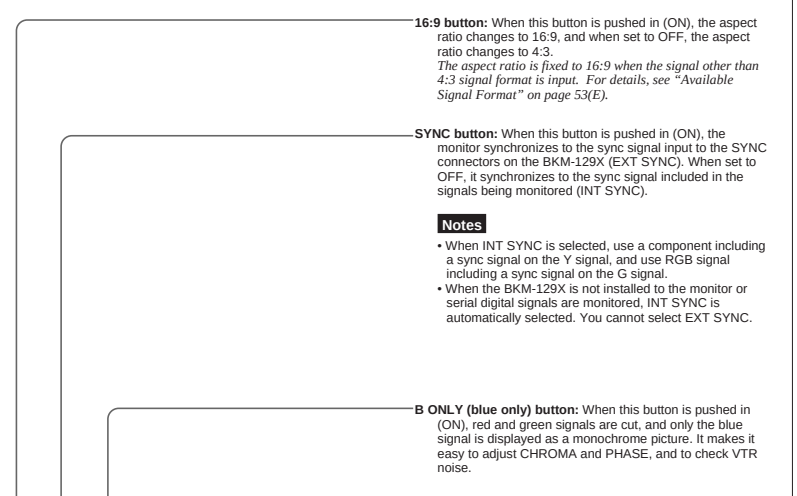
F2 button: When this button is pushed in (ON), you can access directly the MANUAL menu of the level 1 of the COLOR TEMP ADJ menu, if the short-cut function is assigned to this button.

F1 button: When this button is pushed in (ON), the characters disappear from the monitor on the MANUAL menu of the level 1 of the CONTROL PRESET ADJ menu, the MANUAL menu of the level 1 of the COLOR TEMP ADJ menu, and the ALIGNMENT menu.

COMB button: This button does not function with this monitor. However, when the BKM-127W NTSC/PAL Input Adaptor (optional) is installed and the NTSC or PAL color signals are received, the monitor can be used with the comb filter turned on.

APT (aperture) button: When this button is pushed in (ON), the frequency response can be modified. The degree of modification is set with the menu. (When RGB signals are input, the button does not function.)

Function buttons in SHIFT ON mode (LEDs of function buttons in amber)



16:9 button: When this button is pushed in (ON), the aspect ratio changes to 16:9, and when set to OFF, the aspect ratio changes to 4:3.
The aspect ratio is fixed to 16:9 when the signal other than 4:3 signal format is input. For details, see "Available Signal Format" on page 53(E).

SYNC button: When this button is pushed in (ON), the monitor synchronizes to the sync signal input to the SYNC connectors on the BKM-129X (EXT SYNC). When set to OFF, it synchronizes to the sync signal included in the signals being monitored (INT SYNC).

Notes
- When INT SYNC is selected, use a component including a sync signal on the Y signal, and use RGB signal including a sync signal on the G signal.
- When the BKM-129X is not installed to the monitor or serial digital signals are monitored, INT SYNC is automatically selected. You cannot select EXT SYNC.

B ONLY (blue only) button: When this button is pushed in (ON), red and green signals are cut, and only the blue signal is displayed as a monochrome picture. It makes it easy to adjust CHROMA and PHASE, and to check VTR noise.

R/G/B buttons: When these buttons are pushed in (ON), R(red), G(green), and B(blue) beams are cut respectively.

MARKER button: When this button is pushed in (ON), a 4:3 marker is displayed and it is possible to check the 4:3 aspect area in the 16:9 picture.

Note
The 4:3 marker is not displayed when the signals of the 4:3 aspect ratio are monitored or the monitor is in H/V delay mode

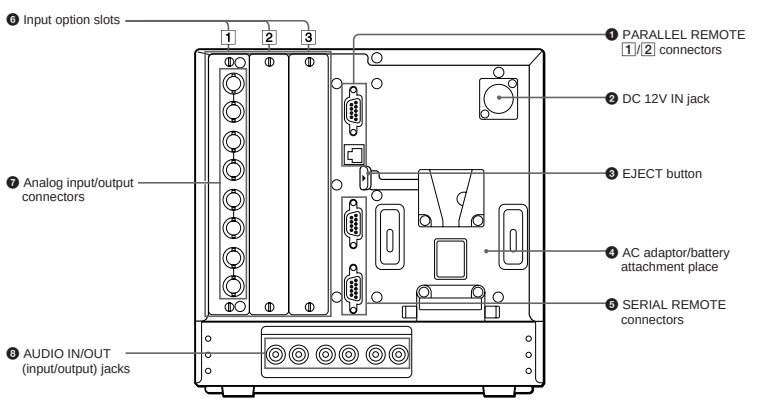
F3/F4 buttons: For future expansion.

http://getMANUAL.com

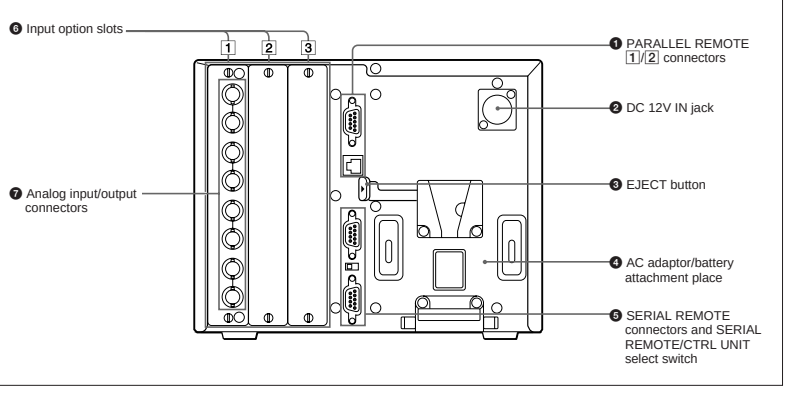
BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A Rear Panel

For the BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A, see pages 21(E) to 23(E).

BVM-D9H5U/D9H5E/D9H5A

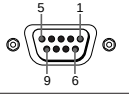


BVM-D9H1U/D9H1E/D9H1A



❶ PARALLEL REMOTE 1/2 connectors (1: female, D-sub 9-pin, 2: modular connector)
Form a parallel switch and controls the monitor externally. The pin assignment and factory setting function assigned to each pin are given below.

1: D-sub 9-pin



Pin number	Functions
1	Set input signal channel 1 (numeric keypad function)
2	Set input signal channel 2 (numeric keypad function)
3	Set red tally lamp on or off
4	Set green tally lamp on or off
5	Select sync signal (SYNC button function)
6	Set underscan on or off
7	Set a 16:9 aspect ratio on or off
8	Set the 4:3 area marker display on or off
9	GND

2: modular connector

Pin number	Functions
1	Set input signal channel 1 (numeric keypad function)
2	Set input signal channel 2 (numeric keypad function)
3	Set red tally lamp on or off
4	Set green tally lamp on or off
5	GND
6	Set underscan on or off

All pin function assignments can be changed with the REMOTE menu.

For information about the REMOTE menu, see " D Assigning the Remote Control Functions — REMOTE Menu" on page 37(E).

To switch each function between on and off or between enable and disable, change pin connections in the following way.

ON or enabled: Short each pin and pin 9 together **for D-sub 9-pin**.
Short each pin and pin 5 together **for modular connector**.

OFF or disabled: Leave each pin open.

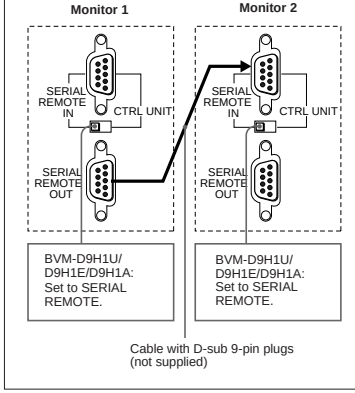
❷ DC 12V IN jack (XLR-type, 4-pin)
Connects the DC 12V external power source to use the monitor.

❸ EJECT button
While sliding this button, remove the AC adaptor or battery.

❹ AC adaptor/battery attachment place
Attach the AC adaptor or battery.

❺ SERIAL REMOTE connectors (female, D-sub 9-pin), and SERIAL REMOTE/CTRL UNIT select switch (BVM-D9H1U/D9H1E/D9H1A only)
These are RS-485 serial interface connectors, used for connecting two or more BVM-xxE/F/G, BVM-xxD and HDM-xxE series monitors. The IN and OUT connectors form a loop-through connection.
BVM-D9H1U/D9H1E/D9H1A only: The SERIAL REMOTE/CTRL UNIT select switch is set to SERIAL REMOTE at the factory.

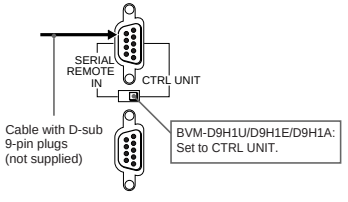
For connecting the monitor (used for daisy chain connections)
Connect two monitors using a cable with D-sub 9-pin plugs such as an RCC-5G (not supplied) as follows:



(continued)

For connecting the BKM-10R Monitor Control Unit

Connect the monitor and control unit using a cable with D-sub 9-pin plugs such as an RCC-5G (not supplied) as follows:



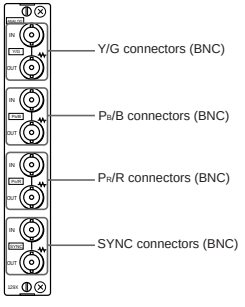
❻ Input option slots (three slots)

The monitor may be fitted with optional input adaptors up to three.
The BKM-129X is installed to the monitor at the factory.

Notes

- The BKM-142HD uses two input option slots.
- Each adaptor can also be installed into SLOT 1. Install any adaptor to SLOT 1.

❼ Analog input/output connectors (BKM-129X)



RGB signals or component signals (Y/P_B/P_R) can be fed in the IN connectors. The type of signal applied to each connector is set with the INPUT CONFIG menu. The OUT connectors are used for loop-through output of the input signal.

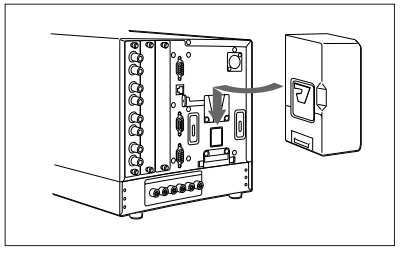
For information about the INPUT CONFIG menu, see " C Setting the Input Configuration — INPUT CONFIG Menu" on page 35(E).

❽ AUDIO IN/OUT (input/output) jacks (BVM-D9H5U/D9H5E/D9H5A only)

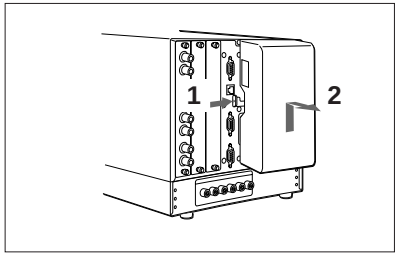
Connects to the audio output jacks of the VCR or microphone amplifier. The monitor is equipped with three input and output jacks. You can obtain the loop-through output from the OUT jacks.

Attaching the AC adaptor or battery

Attaching



Removing the AC adaptor or battery

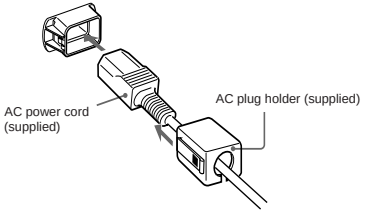


Note

Use the supplied AC adaptor for the BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A models only. It is dangerous to use the AC adaptor for models other than these.

Connecting the AC power cord

Attach the AC adaptor to the monitor, and then connect the supplied AC power cord.

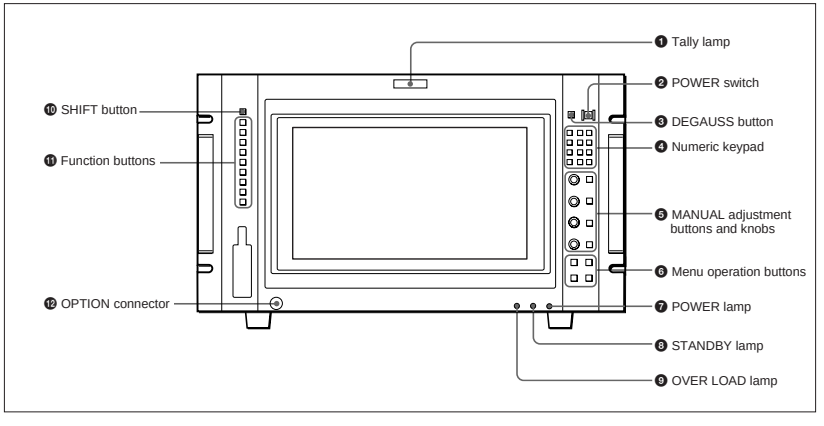


Attach the AC plug holder to the AC power cord, and connect it to the AC IN connector so that the cord does not come loose.

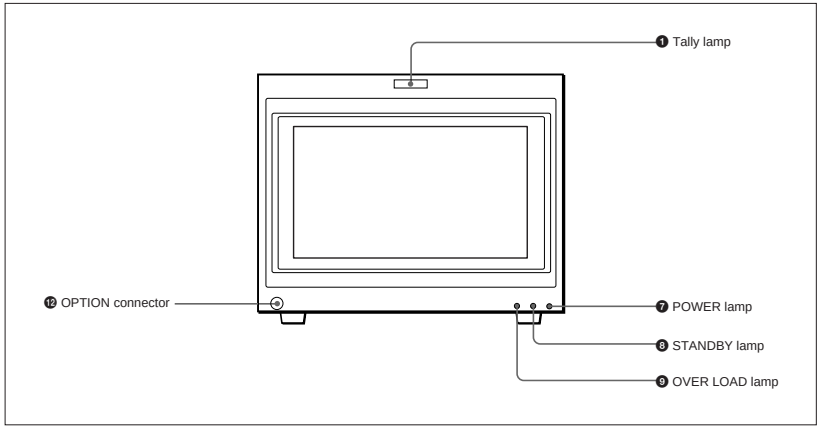
Location and Function of Parts

BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A Front Panel

BVM-D14H5U/D14H5E/D14H5A



BVM-D14H1U/D14H1E/D14H1A



This manual explains the location and function of parts and controls of the BVM-D14H5U/D14H5E/D14H5A. The explanation also applies to the optional BKM-10R/11R Monitor Control Unit.

❶ Tally lamp
With factory settings, the tally lamp lights as follows when the pins of the PARALLEL REMOTE 1 connector on the rear panel are shorted:
– in red, when pins No.3 and No.9 are shorted.
– in green, when pins No.4 and No.9 are shorted.
– in amber, when pins No.3, No.4 and No.9 are shorted.

The tally lamp lights as follows when the pins of the PARALLEL REMOTE 2 connector on the rear panel are shorted:
– in red, when pins No.3 and No.5 are shorted.
– in green, when pins No.4 and No.5 are shorted.
– in amber, when pins No.3, No.4 and No.5 are shorted.

By changing the setting in the REMOTE menu, different pins on the remote connector can be used to control the tally lamp.

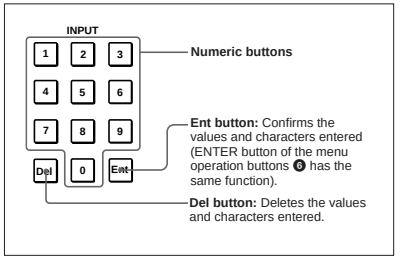
For information about the REMOTE menu, see "D Assigning the Remote Control Functions — REMOTE Menu" on page 37(E).

❷ POWER switch
Press to turn on/off the monitor. By setting with the ADDRESS menu, it is possible to turn on/off the power of the specified monitors only, or of all monitors at the same time.

For information about the ADDRESS menu, see "Selecting the Monitor to Control — ADDRESS Menu" on page 45(E).

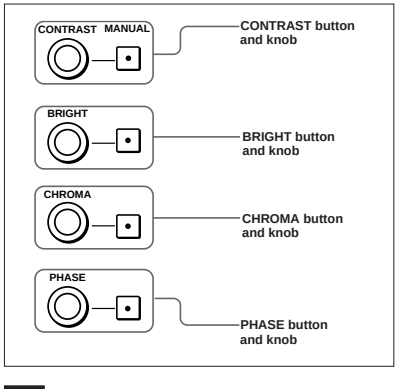
❸ DEGAUSS button
Press to degauss the CRT (every time the monitor is turned on, the CRT is degaussed automatically). To degauss again, wait for more than five minutes.

❹ Numeric keypad
Use to designate the channel number for the input signal to be monitored, or to enter the setting values with the menus.



❺ MANUAL adjustment buttons and knobs
Each press of one of these buttons turns the button's green LED on or off. When the corresponding button is on (lit), it is possible to manually adjust the contrast, brightness, chroma and phase by turning the corresponding knobs. The PHASE knob is also used to enter the setting values with the menus. It is possible to set the preset value for each adjusting item with the CONTROL PRESET ADJ menu.

For Information about the CONTROL PRESET ADJ menu, see " A Preset Adjustment of the Picture Level Control Knobs — CONTROL PRESET ADJ menu" on page 31(E).

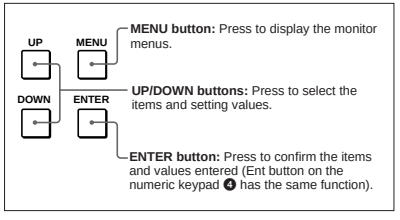


Note
The PHASE and CHROMA knobs may not be adjusted due to the signals. However, these knobs are used for selecting the items or entering the setting values with the menus.

(continued)

Location and Function of Parts

❻ Menu operation buttons



For more information about menu operation, see "Basic Menu Operations" on page 25(E).

❼ POWER lamp

Lights when the monitor is put into operation mode from standby mode (see STANDBY lamp ❽) by pressing the POWER switch ❷.

Note

When the STANDBY lamp ❽ is blinking, the monitor cannot be put into operation mode (internal data initialization is taking place). Wait until the STANDBY lamp ❽ is steadily lit.

❽ STANDBY lamp

Lights when the monitor is in standby mode. The monitor will be in standby mode under the following conditions:

- The MAIN POWER switch (on the rear panel) is turned on when the STANDBY MODE menu of the SYSTEM CONFIG menu is set to ON (the STANDBY lamp will blink for a few moments after the switch is turned on, then will light).
- The monitor is changed from operation mode to standby mode by external control.

For information about the SYSTEM CONFIG menu, see "E Setting the Power-Up Conditions and Data about the Screen Display — SYSTEM CONFIG Menu" on page 39(E).

❾ OVER LOAD lamp

Lights when some malfunction has occured.
When the OVER LOAD lamp is lit, consult your nearest Sony service facilities.

❿ SHIFT button

Press to select one of the two functions designated to the function buttons ⓫.
Each time the SHIFT button is pressed, the LED turns on (SHIFT ON: lits in umber) and off (SHIFT OFF.)

SHIFT OFF: The functions indicated above the function buttons can be used (the LED of the function button lits in green.)

SHIFT ON: The functions indicated below the function buttons can be used (the LED of the function button lits in amber.)

⓫ Function buttons

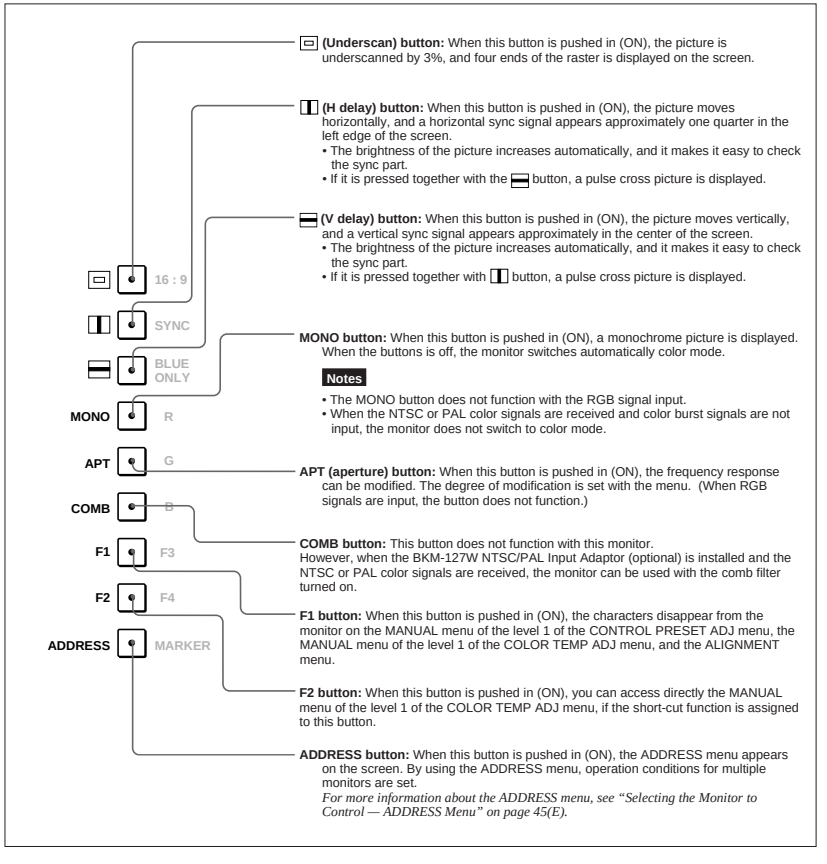
Change the operation conditions for the monitor.
Each time the button is pressed, the LED turns on and turns off, and the operation conditions are changed.
Each button has two functions. Select one of the two functions by pressing the SHIFT button ❿. When the SHIFT button is set to ON, the LED lights in umber, and when the SHIFT button is set to OFF, the LED of each button lights in green.

For the functions of the function buttons in case of SHIFT OFF and SHIFT ON, see pages 19(E) and 20(E).

⓬ OPTION connector

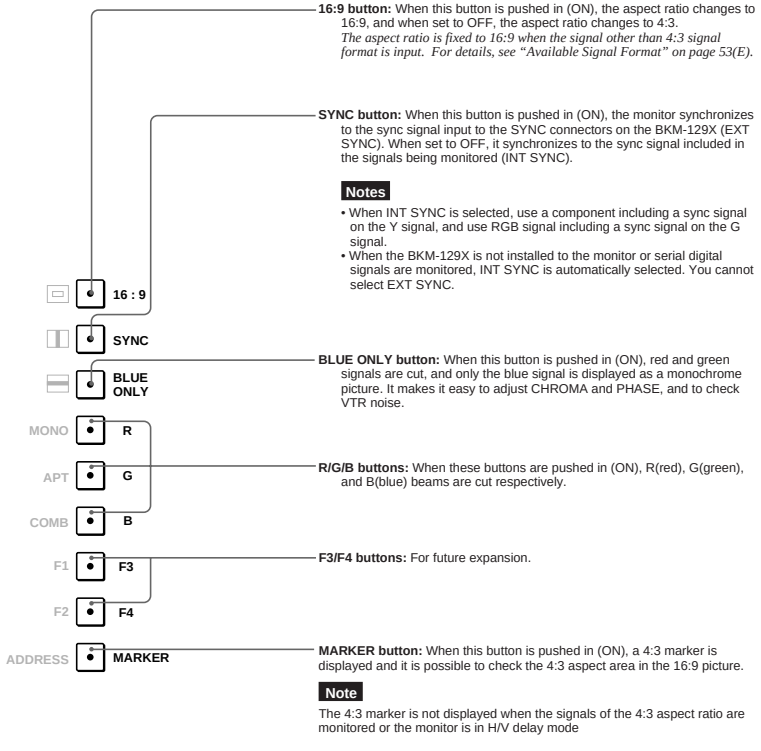
Used to connect the BKM-11R Monitor Control Unit or Auto Setup Probe (BKM-14L, etc.)

Function buttons in SHIFT OFF mode (LEDs of function buttons in green)



Location and Function of Parts

Function buttons in SHIFT ON mode (LEDs of function buttons in amber)



16:9 button: When this button is pushed in (ON), the aspect ratio changes to 16:9, and when set to OFF, the aspect ratio changes to 4:3.
The aspect ratio is fixed to 16:9 when the signal other than 4:3 signal format is input. For details, see "Available Signal Format" on page 53(E).

SYNC button: When this button is pushed in (ON), the monitor synchronizes to the sync signal input to the SYNC connectors on the BKM-129X (EXT SYNC). When set to OFF, it synchronizes to the sync signal included in the signals being monitored (INT SYNC).

Notes

- When INT SYNC is selected, use a component including a sync signal on the Y signal, and use RGB signal including a sync signal on the G signal.
- When the BKM-129X is not installed to the monitor or serial digital signals are monitored, INT SYNC is automatically selected. You cannot select EXT SYNC.

BLUE ONLY button: When this button is pushed in (ON), red and green signals are cut, and only the blue signal is displayed as a monochrome picture. It makes it easy to adjust CHROMA and PHASE, and to check VTR noise.

R/G/B buttons: When these buttons are pushed in (ON), R(red), G(green), and B(blue) beams are cut respectively.

F3/F4 buttons: For future expansion.

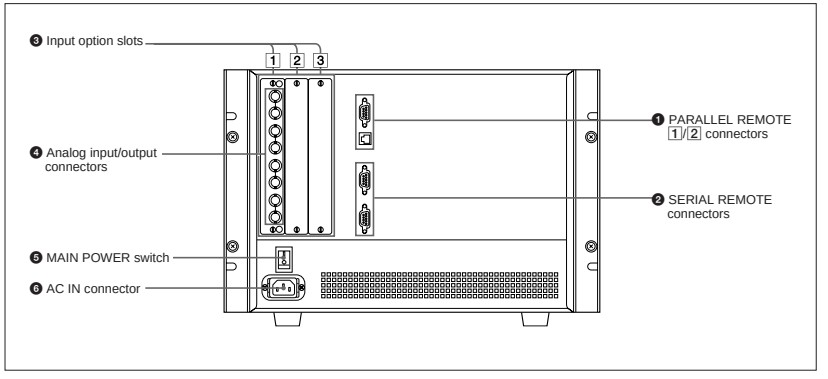
MARKER button: When this button is pushed in (ON), a 4:3 marker is displayed and it is possible to check the 4:3 aspect area in the 16:9 picture.

Note

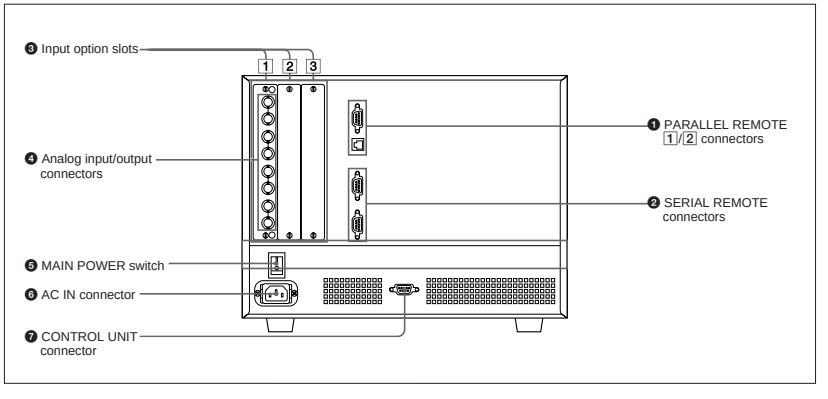
The 4:3 marker is not displayed when the signals of the 4:3 aspect ratio are monitored or the monitor is in H/V delay mode

BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A Rear Panel

BVM-D14H5U/D14H5E/D14H5A



BVM-D14H1U/D14H1E/D14H1A

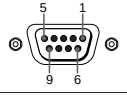


(continued)

Location and Function of Parts

❶ PARALLEL REMOTE 1/2 connectors (1: female, D-sub 9-pin, 2: modular connector)
Form a parallel switch and controls the monitor externally. The pin assignment and factory setting function assigned to each pin are given below.

1: D-sub 9-pin



Pin number	Functions
1	Set input signal channel 1 (numeric keypad function)
2	Set input signal channel 2 (numeric keypad function)
3	Set red tally lamp on or off
4	Set green tally lamp on or off
5	Select sync signal (SYNC button function)
6	Set underscan on or off
7	Set a 16:9 aspect ratio on or off
8	Set the 4:3 area marker display on or off
9	GND

2: modular connector

Pin number	Functions
1	Set input signal channel 1 (numeric keypad function)
2	Set input signal channel 2 (numeric keypad function)
3	Set red tally lamp on or off
4	Set green tally lamp on or off
5	GND
6	Set underscan on or off

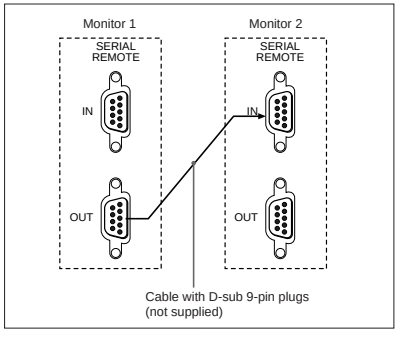
All pin function assignments can be changed with the REMOTE menu.

For information about the REMOTE menu, see " D Assigning the Remote Control Functions — REMOTE Menu" on page 37(E).

To switch each function between on and off or between enable and disable, change pin connections in the following way.
ON or enabled: Short each pin and pin 9 together **for D-sub 9-pin**.
Short each pin and pin 5 together **for modular connector**.
OFF or disabled: Leave each pin open.

❷ SERIAL REMOTE connectors (female, D-sub 9-pin)
These are RS-485 serial interface connectors, used for connecting two or more BVM-xxE/F/G, BVM-xxD and HDM-xxE series monitors.
The IN and OUT connectors form a loop-through connection.

Connect two monitors using a cable with D-sub 9-pin plugs such as an RCC-5G (not supplied) as shown in the figure on the next page.



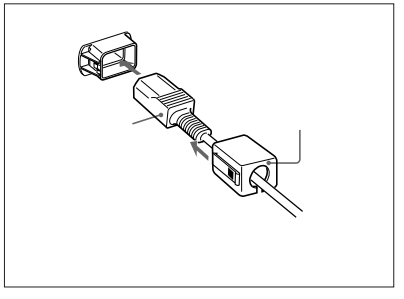
❸ Input option slots (three slots)
The monitor may be fitted with optional input adaptors up to three.
The BKM-129X is installed to the monitor at the factory.

Notes

- The BKM-142HD uses two input option slots.
- Each adaptor can also be installed into SLOT 1. Install any adaptor to SLOT 1.

❹ Analog input/output connectors (BKM-129X)

❻ AC IN connector (3-pin)
Connects the monitor to an AC power source, via the supplied AC power cord.



❼ CONTROL UNIT connector (female, D-sub 9-pin) (BVM-D14H1U/D14H1E/D14H1A only)
Connects a monitor control unit such as the BKM-10R using a cable with D-sub 9-pin plugs such as an RCC-5G (not supplied).

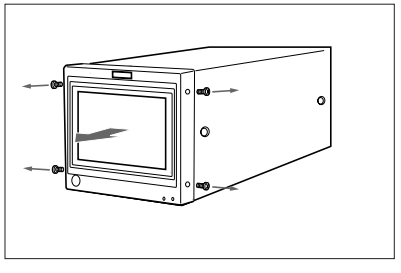
Installation of the 4:3 Mask

When the aspect ratio is switched from 16:9 to 4:3, replace the 16:9 mask with the supplied 4:3 mask.

BVM-D9H1U/D9H1E/D9H1A/ D9H5U/D9H5E/D9H5A

Installing the 4:3 mask

1 Remove four screws from both sides of the monitor and then remove the16:9 mask.



2 Install the 4:3 mask (supplied) and fix both sides with four screws.

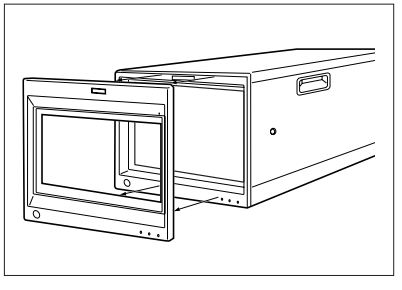
Replacing the 16:9 mask

Remove the 4:3 mask and replace the 16:9 mask using the same procedures as those for installing the 4:3 mask.

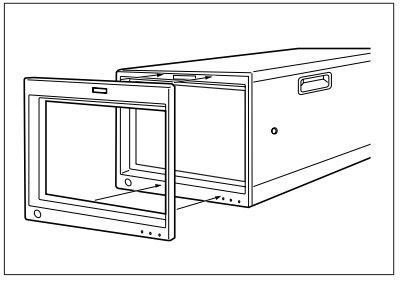
BVM-D14H1U/D14H1E/D14H1A/ D14H5U/D14H5E/D14H5A

Installing the 4:3 mask

1 Remove the 16:9 mask.



2 Install the 4:3 mask (supplied).
① Attach the lower portion of the mask.
② Attach the upper portion of the mask by pressing it until the click.



Replacing the 16:9 mask

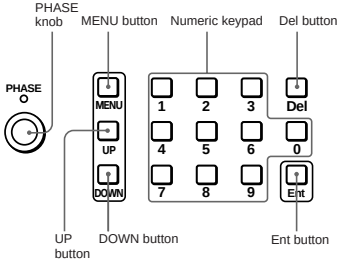
Remove the 4:3 mask and replace the 16:9 mask using the same procedures as those for installing the 4:3 mask.

Basic Menu Operations

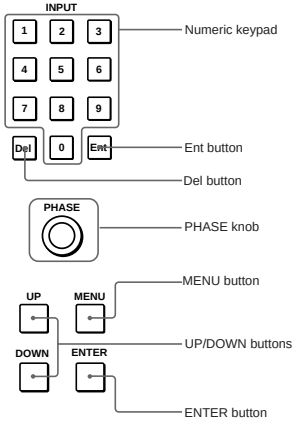
Menu Operation Buttons

The menus are operated using the menu operation buttons on the front panel of the monitor or BKM-10R/11R Monitor Control Unit.

Buttons on the BVM-D9H5U/D9H5E/D9H5A



Buttons on the BVM-D14H5U/D14H5E/D14H5A

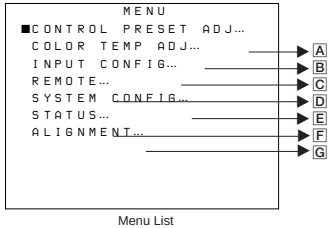


The functions of the menu operation buttons are described below.

Button	Function
UP button	Moves the cursor upward. In setting mode, increases the setting and adjustment values.
DOWN button	Moves the cursor downward. In setting mode, decreases the setting and adjustment values.
MENU button	Displays the Menus. Goes back to the menu of the upper level (on the Main Menu, goes back to the normal picture).
ENTER button/ Ent button	Executes the items selected and settings.
PHASE knob	By turning this knob clockwise, the cursor moves upward. In setting mode, increases the setting and adjustment values (has the same function as UP button). By turning this knob counterclockwise, the cursor moves downward. In setting mode, decreases the setting and adjustment values (has the same function as DOWN button).
Numeric keypad	Enters the numerical values.
Del button	Deletes the values and characters entered.

Displaying the Menus

Press the MENU button.
The menu list is displayed on the screen.



Menu List

When you select one item on the main menu, the level 1 menu corresponding to the selected item on the main menu appears.

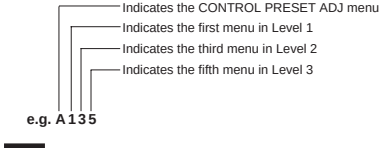
For information about the items on the main menu, see "Menu Structure" on page 30(E).

Note

Menu settings that cannot be changed are displayed in blue.

About menu numbers

For purposes of explanation in this manual, each menu is preceded by menu numbers. The alphabet determines the classification of menus on the Menu List (Main Menu), and the numbers determine the level and the order. These menu numbers are not shown on the screen.



Note

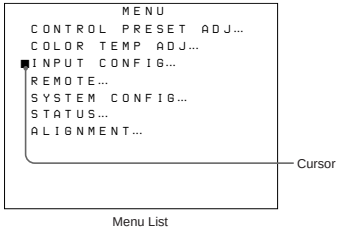
Only the menus which require explanation are preceded by menu numbers. Thus, the menu number is counted without menus which do not require explanation.

Menu Operation

Follow the steps described below to display the menu and perform the adjustment or setup you wish.

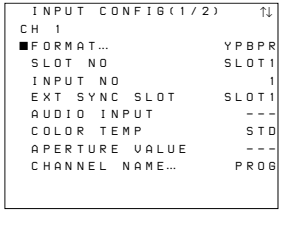
1 Press the MENU button.
The Menu List is displayed.

2 Using the UP/DOWN buttons or PHASE knob, move the cursor to the desired item. (Example: select the INPUT CONFIG menu by pressing the DOWN button.)



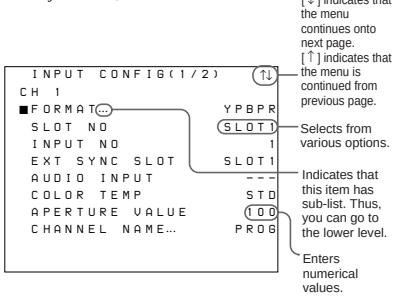
Menu List

3 Press the ENTER button or Ent button.
The Level 1 of the selected menu is displayed.



(continued)

4 Repeat steps **2** and **3** until the desired menu is displayed.
For more information about setting and adjustments, see below.



To abort menu operation

Press the MENU button. The menu of the upper level is displayed.
The setting or adjustment being performed is canceled, and data loading or saving is aborted.

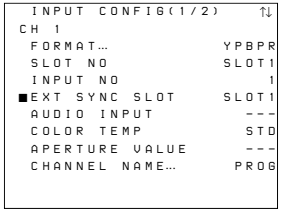
If "NG" or "ERROR" appears during menu operation

Press the MENU button to return to the menu in use.

Choosing one of two or more selections

Selecting in setting mode

1 Using the UP/DOWN buttons or PHASE knob, move the cursor to the desired item and press the ENTER or Ent button.
The selected item is displayed in yellow text and set to setting mode.

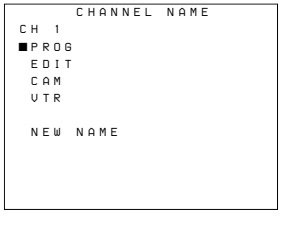


2 Using the UP/DOWN buttons or PHASE knob, change the setting.

3 Press the ENTER or Ent button.
The setting is confirmed (The item is displayed in white text again).

Selecting from the setting list

1 Using the UP/DOWN buttons or PHASE knob, move the cursor to the desired item in the setting list.

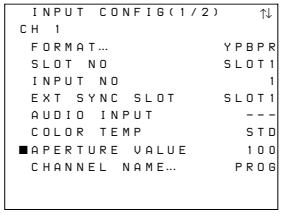


2 Press the ENTER or Ent button.
The display returns to the menu of the upper level, and the selected setting is executed.

Basic Menu Operations

Entering a numerical value

1 Using the UP/DOWN buttons or PHASE knob, move the cursor to the desired item and press the ENTER or Ent button.
The selected item is displayed in yellow text and set to setting mode.

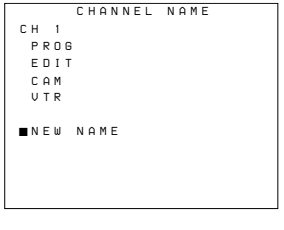


2 Set the value in one of the following three ways:
- Enter the value directly using the numeric keypad and press the ENTER or Ent button
- Select the value using the UP/DOWN buttons
- Select the value using the PHASE knob

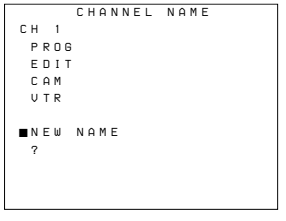
3 Press the ENTER or Ent button.
The setting is confirmed (The item is displayed in white text again).

Entering characters

1 Display the setting menu and set the cursor to NEW NAME using the UP/DOWN buttons or PHASE knob.



2 Press the ENTER or Ent button.
"?" is displayed in yellow. The "?" indicates the position where character input is possible.

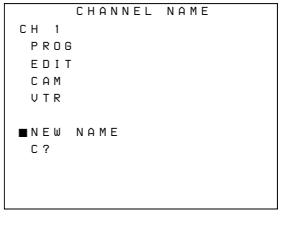


3 Select the character you wish to enter using the UP/DOWN buttons or PHASE knob.
When you press the UP button, or turn the PHASE knob clockwise, the characters and symbols appear in the order shown below.

A B .....Y Z 0 1 .....8 9 (,) : ; . - + / & (space) ?

If you press the UP/DOWN button or turn the PHASE knob counterclockwise, the characters and symbols appear in the reverse order described above.

4 Press the ENTER or Ent button.
The selected character is entered.



5 Repeat steps **3** and **4** until all the characters are entered, then press the ENTER or Ent button.
The selected characters are confirmed, and the display returns to the menu of the previous level.

To correct the entered character

Press the Del button on the numeric keypad. The character on the left side of the "?"(in yellow) is deleted.

ADDRESS Menu

In addition to the menus displayed on the menu list, the ADDRESS menu is provided. This ADDRESS menu is used to select the monitor or the monitor group, so that when several monitors are connected together via serial remote ports, the control panel can select which monitor to control.
To display or exit the ADDRESS menu, press the ADDRESS button. The method of choosing menu items and changing settings is the same as with the other menus.

For information about the ADDRESS menu, see "Selecting the Monitor to Control —ADDRESS Menu" on page 45(E).

Menu Structure

Menus consist of one to three levels.

Detailed information on the levels of menus is described at the top of explanation of each menu.

	Main Menu	Functions
A	**CONTROL PRESET ADJ menu**	Sets the preset values for the input signal's chroma, contrast, phase, and brightness. (page 31(E))
B	**COLOR TEMP ADJ menu**	Sets the color temperature. (page 33(E))
C	**INPUT CONFIG menu**	Sets the input channel. (page 35(E))
D	**REMOTE menu**	Sets the remote control functionality. (page 37(E))
E	**SYSTEM CONFIG menu**	Sets the power-up conditions and data about the screen display. (page 39(E))
F	**STATUS menu**	Displays the information about the monitor or options installed in the monitor. (page 42(E))
G	**ALIGNMENT menu**	Adjusts the position, size and geometry of the picture. (page 43(E))

A Preset Adjustment of the Picture Level Control Knobs — CONTROL PRESET ADJ Menu

Overview

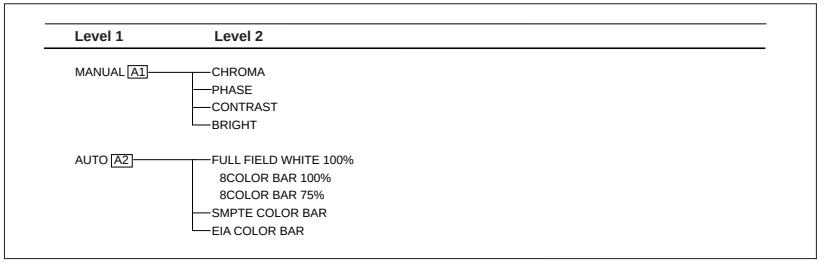
The preliminary adjustments of chroma, phase, contrast and brightness are carried out with the CONTROL PRESET ADJ menu to set the preset values to the knobs for the above-mentioned adjustments.

Preset values can be set in the following two ways:
- **Adjustment with the MANUAL adjustment knobs (MANUAL menu)**
- **Automatic adjustment (AUTO menu)**
  An external color bar signal is necessary.

Note

After installing the optional board, carry out AUTO adjustment.

Structure of the CONTROL PRESET ADJ Menu



Setting Lists in the CONTROL PRESET ADJ Menu

This section explains the setting lists displayed in the menu.

How to read the setting lists

- For purposes of explanation, each setting list is preceded by a menu number. These numbers are not displayed on the screen.
  For more information about the menu number, see "About menu numbers" on page 26(E).
- The arrow mark (⇨) refers you to another setting list that appears after you make the setting, or to an operation that is carried out as a result of the setting. When there is no arrow mark, the menu does not have any sub-list.

http://getMANUAL.com

A Preset Adjustment of the Picture Level Control Knobs — CONTROL PRESET ADJ Menu

A CONTROL PRESET ADJ menu
Select the setting method.
MANUAL... : Set with the MANUAL adjustment knobs. ⇨A1
AUTO... : Set by automatic adjustment. ⇨A2

A1 MANUAL menu
Adjust values by turning the CHROMA, PHASE, CONTRAST, and/or BRIGHT knobs. After the adjustment, press the ENTER or Ent button to confirm the adjusted values.
The setting value is 0 to 200.
CHROMA: xxx
PHASE: xxx
CONTRAST: xxx
BRIGHT: xxx

When you want to erase characters from the screen while adjusting manually
Press the F1 button. The characters disappear. To display characters, press the F1 button again.

To reset the setting to the default
Press the corresponding MANUAL adjustment button (BVM-D14H5U/D14H5E/D14H5A) or knob (BVM-D9H5U/D9H5E/D9H5A.) The adjusted value is reset to 100 (default).

A2 AUTO menu
You can adjust the CHROMA and PHASE levels automatically. Input the color bar signals to the board to be adjusted and select the required color bar signals.
⇨Adjustment is carried out.
8COLOR BAR 100%: 100% full-field 8-color bar (white, yellow, cyan, green. magenta, red, blue, black)
8COLOR BAR 75%: 75% full-field color bar (with 100% white signal)
SMPTE COLOR BAR: SMPTE standard color bar
EIA COLOR BAR: EIA standard color bar

Note
When you execute the AUTO menu, SYNC button should be set to OFF (INT SYNC).
EXT SYNC will cause an error abortion of auto adjustment procedure.

B Adjusting the Color Temperature — COLOR TEMP ADJ Menu

Overview

The monitor can memorize the data for up to three color temperatures (STD, COL1, COL2.) The data for each color temperature is adjusted with the COLOR TEMP ADJ menu. The data of the color temperature selected in the INPUT CONFIG menu is adjusted. Color temperature adjustment can be made in the following three ways:

- **Knob adjustment (MANUAL menu)**
  You can adjust the color temperature with the bias and gain knobs.
- **Automatic adjustment using a probe (PROBE menu)**
  You can use the following probes for automatic adjustment of color temperature. Except for the Sony BKM-14L, a cable is required to connect the color analyzer to the monitor.

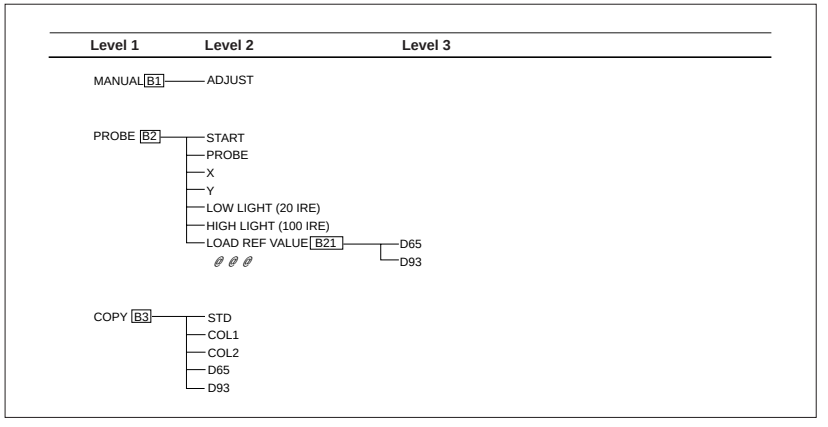
Manufacturer	Probe Model Name
SONY	BKM-14L (no cable required)
GRASEBY	SLS 9400
MINOLTA	CA-100
PHILIPS	PM 5639
THOMA	TF6

For more information about the cable specification required and about the connection, see "Connection Cable Specifications for Color Temperature Probes" on page 54(E).

Notes
- The CRT size of the BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A is small. So, when a probe other than the Sony BKM-14L is used, use the probe closely to the CRT screen.
- After the color temperature is adjusted by automatic adjustment, carry out the AUTO adjustment of the CONTROL PRESET ADJ menu (AUTO CHROMA PHASE adjustment.)

- **Copying other color temperature data (COPY menu)**
  You can copy the memorized color temperature data (STD/COL1/COL2/D65/D93.) Use the factory setting value or the adjusted value as an original value to shorten the adjustment time.

Structure of the COLOR TEMP ADJ Menu



B Adjusting the Color Temperature — COLOR TEMP ADJ Menu

Setting Lists in the COLOR TEMP ADJ Menu

This section explains the setting lists displayed in the menu.

How to read the setting lists

- For purposes of explanation, each setting list is preceded by a menu number. These numbers are not displayed on the screen.
  For more information about the menu number, see "About menu numbers" on page 26(E).
- The arrow mark (⇨) refers you to another setting list that appears after you make the setting, or to an operation that is carried out as a result of the setting. When there is no arrow mark, the menu does not have any sub-list.

B COLOR TEMP ADJ menu

Select the adjustment method.
MANUAL... : Set with the MANUAL adjustment knob. ⇨B1
PROBE... : Set using a probe. ⇨B2
COPY... : Copy data from elsewhere. ⇨B3

B1 MANUAL menu

Adjust the gain and bias with the MANUAL adjustment knob.
ADJUST... : Adjust the gain and bias. To shift between gain adjustment and bias adjustment, press UP/DOWN buttons. Use appropriate knobs in each adjustment as described below. After the adjustment, press the ENTER or Ent button to confirm the adjusted values.
RED: CONTRAST KNOB (Adjust the R gain or bias with the CONTRAST knob.)
GREEN: BRIGHT KNOB (Adjust the G gain or bias with the BRIGHT knob.)
BLUE: CHROMA KNOB (Adjust the B gain or bias with the CHROMA knob.)
LUMINANCE: PHASE KNOB (Adjust luminance with the PHASE knob.)

To reset RED/GREEN/BLUE to the value before adjustment

When you are adjusting the gain or bias using the MANUAL adjustment knobs, you can reset the setting to the one before adjustment by pressing the corresponding MANUAL adjustment button (BVM-D14H5U/D14H5E/D14H5A) or knob (BVM-D9H5U/D9H5E/D9H5A).
To reset all of settings at the same time, press the PHASE button or knob.

Note

You cannot reset the setting after you press the ENTER or Ent button.

To access the MANUAL menu directly

When the F2 button is assigned as the short-cut key to the MANUAL menu, you can directly access the MANUAL menu that corresponds to the color temperature setting (STD/COL1/COL2) set to the image on the screen.
For details of how to assign the short-cut key, see " E Setting the Power-Up Conditions and Data about the Screen Display — SYSTEM CONFIG Menu" on page 39(E).

B2 PROBE menu

Select the probe for color temperature adjustment.
START: Start adjustment.
PROBE: Select the probe.
X: Enter the x coordinate.
Y: Enter the y coordinate.
LOW LIGHT (20IRE): Enter the luminance (cd/m^2) for low light.
HIGH LIGHT (100IRE): Enter the luminance (cd/m^2) for high light.
LOAD REF VALUE: Select the standard settings of the x and y coordinates. ⇨B21

B21 LOAD REF VALUE

Select one of the followings:
D65: Use D65 setting (x and y coordinates and standard luminance).
D93: Use D93 setting (x and y coordinates and standard luminance).

B3 COPY menu

Select one of followings: ⇨ The current data, which is used for adjusting, is copied.
STD: Copy STD data (factory setting: D65).
COL1: Copy COL 1 data (factory setting: D93).
COL2: Copy COL 2 data (factory setting: D65).
D65: Copy the color temperature of D65.
D93: Copy the color temperature of D93.

Note

The current data which is used for adjusting (selected in the INPUT CONFIG menu) is displayed in blue letters and you can not select it.

C Setting the Input Configuration — INPUT CONFIG Menu

Overview

You can set up to nine input channels.
Data pertaining to the input signals are set with the INPUT CONFIG menu.
When a channel number (1 to 9) is entered with the numeric keypad, it is then possible to set which input connector on the rear panel will be assigned to that channel number, and select the type of signal that will be connected.

Assigning slot and connector numbers

Set which input connector on which slot will be assigned to the current channel.

Assigning the signal type and format

The signal type and format which can be assigned to each channel number vary, depending on what adaptors are installed in the rear panel.

To assign D1 serial digital signals

Serial digital signals can be assigned to the slot where the BKM-120D is installed.

To assign analog composite signals

Analog composite signals can be assigned to the slot where the BKM-127W is installed.

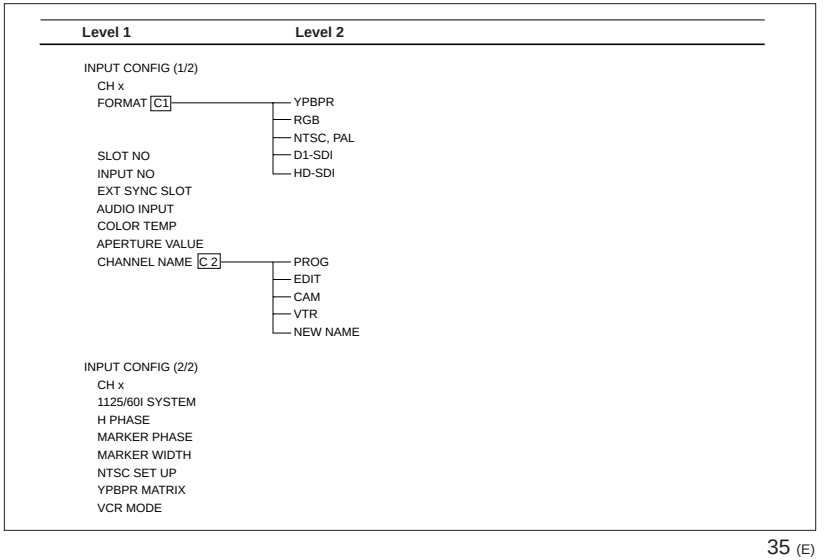
To assign HD serial digital signals

HD serial digital signals can be assigned to the slots where the BKM-142HD is installed.

To assign analog component or RGB signals

Analog component or RGB signals can be assigned to the slot where BKM-129X is installed.

Structure of the INPUT CONFIG Menu



C Setting the Input Configuration — INPUT CONFIG Menu

Setting Lists in the INPUT CONFIG Menu

This section explains the setting lists displayed in the menu.

How to read the setting lists

- For purposes of explanation, each setting list is preceded by a menu number. These numbers are not displayed on the screen.
  For more information about the menu number, see "About menu numbers" on page 26(E).
- The arrow mark (⇨) refers you to another setting list that appears after you make the setting, or to an operation that is carried out as a result of the setting. When there is no arrow mark, the menu does not have any sub-list.

C (1/2) INPUT CONFIG (1/2) menu

Set input signal data for each channel.

CH x: Current channel is indicated. To change the channel, enter a channel number with the numeric keypad. The settings below will be stored as information of this channel.
FORMAT... : Select the input signal type. ⇨C1
SLOT NO: Select the slot number.
INPUT NO: Select the input connector number.
EXT SYNC SLOT: Select the slot when the external sync signal is used.
AUDIO INPUT (BVM-D9H5U/D9H5E/D9H5A only): Select the audio input number.
COLOR TEMP: Select the color temperature.
APERTURE VALUE: Enter the aperture adjustment value (0 to 200).
CHANNEL NAME: Give the channel a name. ⇨C2

C (2/2) INPUT CONFIG (2/2) menu

Set input signal data for each channel.

CH x: Current channel is indicated. To change the channel, enter a channel number with the numeric keypad. The settings below will be stored as information of this channel.
1125/60I SYSTEM: Select the number of active scanning lines per frame for 1125/60I input signals. When the HD SDI signal is input, the number of active scanning lines is selected automatically.
1035: The active scanning lines are 1035 lines.
1080: The active scanning lines are 1080 lines
H PHASE: Set the horizontal picture position (–128 to +127).
MARKER PHASE: Set the 4:3 marker position.
MARKER WIDTH: Set the 4:3 marker width.
NTSC SET UP: Set the setup level when the BKM-127W is installed. SETUP 7.5 or 0.
YPBPR MATRIX: Select the matrix when YP_BP_R signals of the signal format 480/60I or 480/60P (TV lines 525) are input.
VCR MODE: Compensate for a distorted picture when the input signals from the VCR are not typical. This mode is effective when the signal formats 480/60I or 575/50I are input.
ON: Operates when the signal formats 480/60I or 575/50I are input.
OFF: Does not operate.

C1 FORMAT menu

Select the signal format.

YPBPR: Select the component signals when the BKM-129X is installed. SPMTE, BETACAM 7.5 or 0.
RGB: Select when the BKM-129X is installed.
NTSC, PAL: Selects when the BKM-127W is installed.
D1-SDI: Select when the BKM-120D is installed.
HD-SDI: Select when the BKM-142D is installed.

C2 CHANNEL NAME menu

Give the channel a name. Enter a name after a preset one or a new one.

PROG: Program signal.
EDIT: Signal from an editor.
CAM: Camera signal.
VTR: Signal from a VTR.
NEW NAME: Enter a new name. (Up to 20 characters can be entered and up to six characters from the head of the name are displayed in the INPUT CONFIG menu (C 1/2).)

D Assigning the Remote Control Functions — REMOTE Menu

Overview

The remote control functions are set with the REMOTE menu. With this monitor, both serial remote control (SERIAL REMOTE) and parallel remote control (PARALLEL REMOTE) are possible.

- **Settings for the serial remote control (SERIAL REMOTE)**
  An address number (MONITOR ADDRESS) and group number (GROUP ADDRESS) can be assigned to the monitor connected to the SERIAL REMOTE connector.
- **ON/OFF setting for the parallel remote control (PARALLEL REMOTE)**
- **Settings for the parallel remote control (PARALLEL REMOTE)**
  Functions can be assigned to the pins of the PARALLEL REMOTE connector.

Priority order of the remote control functions

It is possible to simultaneously use the BKM-10R/11R Monitor Control Unit, SERIAL REMOTE, and PARALLEL REMOTE for control, but commands from PARALLEL REMOTE have priority. Therefore, it is impossible for the BKM-10R/11R or SERIAL REMOTE to change items set by PARALLEL REMOTE.
There is no priority order between commands from SERIAL REMOTE and the BKM-10R/11R control panel.

PARALLEL REMOTE 1 and 2 are connected parallel inside the unit, therefore, there is no priority order between them.

About monitor address and group numbers

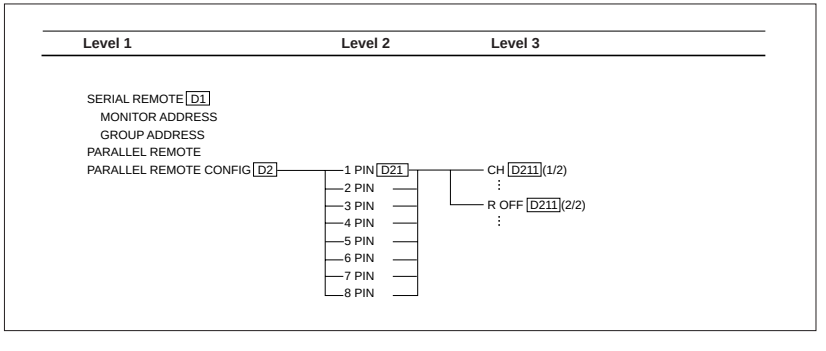
It is possible to control up to 32 monitors connected via serial remote connector (using the SERIAL REMOTE connector). By giving each monitor a monitor address and group number, it is possible to control just a specific monitor or monitor group.
With the SERIAL REMOTE menu, each monitor can be set with a monitor address and group number, between 1 and 99.
The ADDRESS menu is used to control the monitors which are connected by the serial remote connectors.

For information about the ADDRESS menu, see "Selecting the Monitor to Control — ADDRESS Menu" on page 45(E).

Note

The address number must differ from one monitor to another. If two or more monitors have the same address number, an operation error occurs.

Structure of the REMOTE Menu



D Assigning the Remote Control Functions — REMOTE Menu

Setting Lists of the REMOTE Menu

This section explains the setting lists displayed in the menu.

How to read the setting lists

- For purposes of explanation, each setting list is preceded by a menu number. These numbers are not displayed on the screen.
  For more information about the menu number, see "About menu numbers" on page 26(E).
- The arrow mark (⇨) refers you to another setting list that appears after you make the setting, or to an operation that is carried out as a result of the setting. When there is no arrow mark, the menu does not have any sub-list.

D REMOTE menu

Select the type of remote control.
SERIAL REMOTE : Set the address and group number of the monitor controlled via the SERIAL REMOTE connector. ⇨D1
PARALLEL REMOTE: Select whether parallel remote control will be used or not (ON or OFF.)
PARALLEL REMOTE CONFIG : Set the pin assignments for the PARALLEL REMOTE connector. ⇨D2

D1 SERIAL REMOTE menu

Set the monitor address and group number.
MONITOR ADDRESS: Enter a number.
GROUP ADDRESS: Enter a number.

D2 PARALLEL REMOTE CONFIG menu

Select the PARALLEL REMOTE connector pins for which you want to change the function. The factory settings for each pin are given below. ⇨D211
PINs 1 to 4, and PIN 6 of the PARALLEL REMOTE 1 and 2 are common settings.
1 PIN: CH01
2 PIN: CH02
3 PIN: TALLY RED
4 PIN: TALLY GREEN
5 PIN: EXT SYNC (PARALLEL REMOTE 1)
GND (PARALLEL REMOTE 2)
6 PIN: UNDERSCAN
7 PIN: 16:9
8 PIN: 4:3 MARKER

Note

PINs 1 to 4, and PIN 6 of the PARALLEL REMOTE 1 and 2 are connected inside the unit, therefore different functions cannot be assigned to those pins.

D211 (1/2) 1-8 PIN menu (1/2)

Assign a function to the selected pin.
CH: Select a channel number. Enter the desired channel number with the numeric keypad.
----: Set to unused.
UNDER SCAN: Set underscan on or off.
16:9: Set a 16:9 aspect ratio on or off.
H DELAY: Set the horizontal sync display on or off.
V DELAY: Set the vertical sync display on or off.
EXT SYNC: Set the synchronization to external sync signals enabled or disabled.
APERTURE: Set the correction of frequency characteristics enabled or disabled.
MONO: Set monochrome display on or off.
BLUE ONLY: Set the blue signal pictures display (monochrome) on or off.

D211 (2/2) 1-8 PIN menu (2/2)

Assign a function to the selected pin.
R OFF: Set cutting red beams enabled or disabled.
G OFF: Set cutting green beams enabled or disabled.
B OFF: Set cutting blue beams enabled or disabled.
4:3 MARKER: Set the 4:3 marker display on or off.
CAPTION VISION: Set Caption Vision on or off.
TALLY RED: Set tally red on or off.
TALLY GREEN: Set tally green on or off.
DEGAUSS: Set degaussing on or off.
POWER OFF: Set the monitor power on or off.

For the pin assignment, see "PARALLEL REMOTE 1/2 connectors" in the Location and Function of Parts on page 13(E) for BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A or page 22(E) for BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A.

E Setting the Power-Up Conditions and Data about the Screen Display — SYSTEM CONFIG Menu

Overview

The SYSTEM CONFIG menu is displayed on the two pages.
The SYSTEM CONFIG (1/2) menu is used for the following settings:

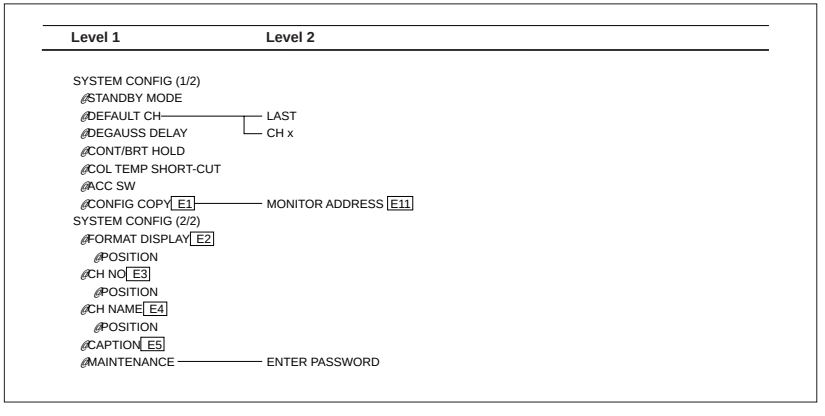
- **Power-up condition (STANDBY MODE menu)**
  This menu sets the condition of the monitor when the MAIN POWER switch on the rear panel is switched on (BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A) or when the battery is installed (BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A.)
- **Power-up input channel (DEFAULT CH menu)**
  This menu sets the power-up input channel.
- **Time from power-up until degauss (DEGAUSS DELAY menu)**
  If several monitors are turned on at the same time and all start degaussing at the same time, there will be a very large current draw on the power supply for a few moments. To prevent this, the delay time between power-up and degaussing can be set for each monitor independently.
- **Setting of the contrast and brightness after adjusting the white balance (CONT/BRT HOLD menu)**
  Selects if the adjusted contrast and brightness are retained or they are reset to the center values, when the color temperature is adjusted in the COLOR TEMP ADJ menu.
- **Assigning shortcut to the COLOR TEMP ADJ menu to the F2 key (COL TEMP SHORT-CUT menu)**
  Assigns the shortcut to the MANUAL menu of the COLOR TEMP ADJ menu to the F2 key. This allows you to jump directly to the MANUAL menu corresponding to the color temperature set to the currently displayed image (STD/COL 1/COL 2.)
- **Auto color control (ACC SW menu) (when using the BKM-127W)**
  Selects if the ACC (Auto Color Control) circuit is turned on or off.
- **Selecting the monitor to copy the original data (CONFIG COPY menu)**
  Setting data of the INPUT CONFIG and SYSTEM CONFIG (except the DEGAUSS DELAY data) menus can be copied from the serial connected monitor.

The SYSTEM CONFIG (2/2) menu is used for the following settings:

- **Display mode and position of the signal format (FORMAT DISPLAY and POSITION menus)**
- **Display mode and position of the channel number (CH NO and POSITION menus)**
- **Display mode and position of the channel name (CH NAME and POSITION menus)**
- **Display mode of the caption (CAPTION menu)**

- **Maintenance (MAINTENANCE menu)**
  This is for a service qualified personnel.

Structure of the SYSTEM CONFIG Menu



Setting Lists of the SYSTEM CONFIG Menu

This section explains the setting lists displayed in the menu.

How to read the setting lists

- For purposes of explanation, each setting list is preceded by a menu number. These numbers are not displayed on the screen.
  For more information about the menu number, see "About menu numbers" on page 26(E).
- The arrow mark (⇨) refers you to another setting list that appears after you make the setting, or to an operation that is carried out as a result of the setting. When there is no arrow mark, the menu does not have any sub-list.
- The factory setting is shown in the brackets.

E (1/2) SYSTEM CONFIG (1/2) menu

Set each of the following items.

STANDBY MODE: Select the power-up condition when the MAIN POWER switch is turned on (BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A) or when the battery is installed (BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A.)
ON: Standby mode
[OFF]: Operation mode

DEFAULT CH: Select the power-up input channel (LAST or CH x).
[LAST]: Set the channel to the channel that was selected at the time the power was last turned off.
CH x: Set the channel to a specific channel number.

DEGAUSS DELAY: Set the time between power-up and the beginning of degaussing. Enter the desired time (in seconds, 0 to 255).

CONT/BRT HOLD: Select the contrast and brightness settings to the center or adjusted value after adjusting the white balance or auto adjustment of CONTROL PRESET ADJ (OFF or ON).
ON: The contrast and brightness are set to the value before adjusting.
[OFF]: The contrast and brightness are set to the center value (100) after adjusting.

COL TEMP SHORT-CUT: Assign the shortcut function to the MANUAL menu of the COLOR TEMP ADJ menu to F2 key (OFF or F2).
F2: Assigns the shortcut to the MANUAL menu of the COLOR TEMP ADJ menu.
[OFF]: Does not assign the shortcut to the MANUAL menu of the COLOR TEMP ADJ menu.

ACC SW: Set the automatic color control switch (OFF or ON).

CONFIG COPY...: Copy setting data of the INPUT CONFIG and SYSTEM CONFIG (except the DEGAUSS DELAY data) menus from the serial connected BVM-D9H/D14H monitor. ⇨E11

E11 MONITOR ADDRESS menu

Set the address number of the monitor to be copied.

E (2/2) SYSTEM CONFIG (2/2) menu

Select items to be displayed on the screen.

FORMAT DISPLAY: Select the display mode of the signal format. ⇨E2 (2/2)
POSITION: Select the display position of the signal format. ⇨E2 (2/2)

CH NO: Select the display mode of the channel number. ⇨E3 (2/2)
POSITION: Select the display position of the channel number. ⇨E3 (2/2)

CH NAME: Select the display mode of the channel name. ⇨E4 (2/2)
POSITION: Select the display position of the channel name. ⇨E4 (2/2)

CAPTION: Select the caption display mode. ⇨E5 (2/2)

MAINTENANCE...: Menu for service personnel.

E2 (2/2) FORMAT DISPLAY and POSITION menus

FORMAT DISPLAY menu
Select the display mode of the signal format.

F Displaying Information About the Monitor — STATUS Menu

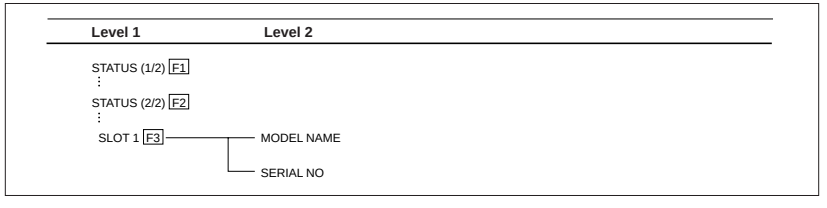
Overview

The STATUS menu is used to view general data about the monitor and information about signals assigned to the slots in the rear panel.

The following information is displayed on the two pages of the STATUS menu.

- **Data about the current channel (STATUS menu (1/2))**
- **Data about the monitor in use and data about the input adaptors installed into the slots on the rear panel (STATUS menu (2/2))**

Structure of the STATUS Menu



Setting Lists of the STATUS Menu

This section explains the setting lists displayed in the menu.

How to read the setting lists

- For purposes of explanation, each setting list is preceded by a menu number. These numbers are not displayed on the screen.
  For more information about the menu number, see "About menu numbers" on page 26(E).
- The arrow mark (⇨) refers you to another setting list that appears after you make the setting, or to an operation that is carried out as a result of the setting. When there is no arrow mark, the menu does not have any sub-list.

F STATUS menu

Select the STATUS menu 1/2 or 2/2. ⇨F1

F1 STATUS (1/2) menu

Data about the current channel is displayed.
CH: channel number
SL: slot number
IN: input connector number
FORMAT: format of the input signal
NAME: channel name

F2 STATUS (2/2) menu

Data about the monitor is displayed at the upper half of the display.
MODEL NAME: model name
SERIAL NO: serial number
OPERATION TIME: operation time (in hours)
SOFTWARE VERSION: software version

Data about the input adaptors installed into the respective slots in the rear panel is displayed at the lower half of the display.
When the BKM-129X is installed in SLOT 1, the following is displayed. When any optional boards are not installed, EMPTY is displayed for SLOT 2 and SLOT 3.
SLOT1: COMPONENT ⇨F3
SLOT2: EMPTY ⇨F3
SLOT3: EMPTY ⇨F3

F3 SLOT 1 to 3 menu

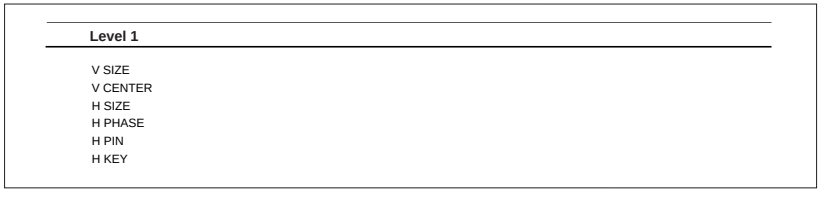
Select the desired slot. Data about the optional board installed in the selected slot is displayed.
MODEL NAME: Model name of that optional board
SERIAL NO: Serial number of that circuit board

G Adjusting the Position, Size and Geometry of the Picture — ALIGNMENT Menu

Overview

The ALIGNMENT menu is used for adjusting the position, size and geometry of the picture.

Structure of the ALIGNMENT Menu



Setting Lists of the ALIGNMENT Menu

This section explains the setting lists displayed in the menu.

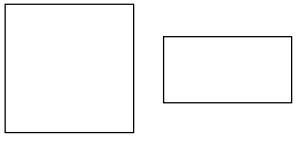
How to read the setting lists

- For purposes of explanation, each setting list is preceded by a menu number. These numbers are not displayed on the screen.
  For more information about the menu number, see "About menu numbers" on page 26(E).

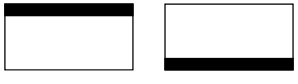
G Adjusting the Position, Size and Geometry of the Picture — ALIGNMENT Menu

G ALIGNMENT menu
Adjust the position, size or geometry of the picture with the UP and DOWN buttons or PHASE knob.

V SIZE: Adjust the height of the picture.

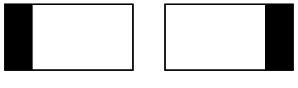


V CENTER: Adjust the vertical picture position.

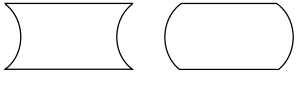


H SIZE: Adjust the width of the picture.

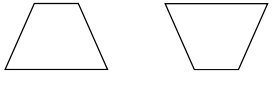
H PHASE: Adjust the horizontal picture position.



H PIN: Correct side pincushion distortion.



H KEY: Correct trapezoid distortion.

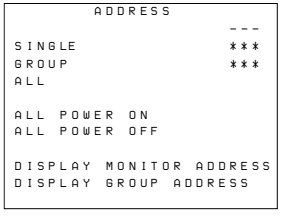


(continued)

Selecting the Monitor to Control — ADDRESS Menu

Overview

When multiple monitors are connected by a serial remote connection, the ADDRESS menu is used to choose whether one particular monitor or monitor group will be controlled, or whether operations are to be performed on all monitors together.



ADDRESS Menu

Displaying the ADDRESS Menu

Press the ADDRESS button.
The ADDRESS menu is displayed on the screen.
By pressing the ENTER or Ent button after selecting the item, serial remote operation becomes activated.

Settings made with the menu items are as follows:

Item	Function
SINGLE	Controls only a specified monitor. Enter the monitor address number.
GROUP	Controls only a specified monitor group. Enter the group address number.
ALL	Controls all monitors.
ALL POWER ON	Turns all connected monitors on.
ALL POWER OFF	Turns all connected monitors off.
DISPLAY MONITOR ADDRESS	When this item is selected, each connected monitor displays its monitor address on its screen.
DISPLAY GROUP ADDRESS	When this item is selected, each connected monitor displays its group address on its screen.

Notes

- To remotely control monitors connected in serial, MONITOR ADDRESS or GROUP ADDRESS of monitors should be correctly set in the REMOTE menu.
  For details of the REMOTE menu, see "D Assigning the Remote Control Functions – REMOTE Menu" on page 37(E).
  - In GROUP or ALL mode, the LEDs of the function buttons will not light with controlled from the menu. (LEDs light only when you press the function button.)
  - In GROUP or ALL mode, LEDs of controlled monitor will light as follows.
- **In case of SHIFT OFF before remote control operation:** LEDs light in green when the SHIFT button is remotely set to OFF.
  For details, see "SHIFT button" on page10(E) for BVM-D9H5U/D9H5E/D9H5A or on page 19(E) for BVM-D14H5U/D14H5E/D14H5A.
- **In case of SHIFT ON before remote control operation:** LEDs light in amber when the SHIFT button is remotely set to ON.
  For details, see "SHIFT button" on page11(E) for BVM-D9H5U/D9H5E/D9H5A or on page 20(E) for BVM-D14H5U/D14H5E/D14H5A.

Cancelling the Remote Control Mode

To cancel the remote control mode, press the ADDRESS button.

Exiting the ADDRESS Menu

To exit the ADDRESS menu, press the ADDRESS button or the MENU button.

Short-cut Function in the ADDRESS Menu

When selecting the monitor, short-cut function will enable to select the target monitor without using the items in the ADDRESS menu. The operation procedure is as follows.

To select the monitor in the SINGLE mode

1 Press the ADDRESS button.

2 Press the address number of the target monitor.
Press one digit address number on the numeric keypad when it is from 1 to 9.
Press three digits address number (press 0 button and then press the two-digit address number) when it is from 10 to 99.

To select the monitors in the GROUP mode

1 Press the ADDRESS button.

2 Press the F1 button.

3 Press the group number of the target monitor.
Press one digit group address number when it is from 1 to 9.
Press three digits group address number (press 0 button and then press the two-digit group number) when it is from 10 to 99.

To select all the monitors in the ALL mode

1 Press the ADDRESS button.

2 Press the F2 button.

Specifications

General

System 15.625 kHz – 45 kHz
(For details, see "Available Signal Format" on page 53(E).)

CRT

BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A

HR Trinitron, 4:3 aspect ratio
Aperture grille pitch: 0.25 mm
90 degree deflection, 21.6 mm diameter in-line gun
Effective picture size with 16:9 aspect ratio:
155.4 × 87.4 mm (6 1/8 × 3 1/2 inches) (w/h)
178 mm (7 inches) (diagonal size)
Effective picture size with 4:3 aspect ratio:
155.4 × 115 mm (6 1/8 × 4 5/8 inches) (w/h)
190.7 mm (7 1/2 inches) (diagonal size)
CRT protection: EHT (extremely high tension) protection type
Warm-up time: approx. 30 minutes
Anode voltage: 15 kV with no beam current

BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A

HR Trinitron, 4:3 aspect ratio
Aperture grille pitch: 0.25 mm
90 degree deflection, 29.4 mm diameter in-line gun
Effective picture size with 16:9 aspect ratio:
267.5 × 150.5 mm (10 5/8 × 6 inches) (w/h)
306.9 mm (12 1/8 inches) (diagonal size)
Effective picture size with 4:3 aspect ratio:
267.5 × 200.6 mm (10 5/8 × 8 inches) (w/h)
331.6 mm (13 1/8 inches) (diagonal size)
CRT protection: EHT (extremely high tension) protection type
Warm-up time: approx. 30 minutes
Anode voltage: 23 kV with no beam current

Nominal chromaticity coordinates:

EBU phosphor

	x	y
R	0.640	0.330
G	0.290	0.600
B	0.150	0.060

Dimensions (w/h/d)

BVM-D9H1U/D9H1E/D9H1A:
approx. 217 × 174 × 364.5mm (8 5/8 × 6 7/8 × 14 3/8 inches)
when the AC adaptor is installed:
approx. 217 × 174 × 419.5mm (8 5/8 × 6 7/8 × 16 5/8 inches)
BVM-D9H5U/D9H5E/D9H5A:
approx. 217 × 218 × 364.5mm (8 5/8 × 8 5/8 × 14 3/8 inches)
when the AC adaptor is installed:
approx. 217 × 218 × 419.5mm (8 5/8 × 8 5/8 × 16 5/8 inches)
BVM-D14H1U/D14H1E/D14H1A:
approx. 346 × 280 × 519mm (13 5/8 × 11 1/8 × 20 1/2 inches)
BVM-D14H5U/D14H5E/D14H5A:
approx. 482 × 280 × 519mm (19 × 11 1/8 × 20 1/2 inches)

Specifications

Specifications

Mass
BVM-D9H1U/D9H1E/D9H1A:
approx. 8.1 kg (17 lb 14 oz)
when the AC adaptor is installed:
approx. 8.9 kg (19 lb 10 oz)
BVM-D9H5U/D9H5E/D9H5A:
approx. 9.3 kg (20 lb 8 oz)
when the AC adaptor is installed:
approx. 10.1 kg (22 lb 4 oz)
BVM-D14H1U/D14H1E/D14H1A:
approx. 21 kg (46 lb 5 oz)
BVM-D14H5U/D14H5E/D14H5A:
approx. 23 kg (50 lb 11 oz)

Power consumption
BVM-D9H1U/D9H1E/D9H1A/
D9H5U/D9H5E/D9H5A:
85 W max. (an optional BKM-142HD or BKM-120D is installed)
60 W typical (the supplied analog component input adaptor is installed)
BVM-D14H1U/D14H1E/D14H1A/
D14H5U/D14H5E/D14H5A:
115 W max. (an optional BKM-142HD or BKM-120D is installed)
100 W typical (the supplied analog component input adaptor is installed)

Peak inrush current
(1) Power ON, current probe method: 80 A (240 V) (BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A),
45 A (240 V) (BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A)
(2) Hot switching inrush current, measured in accordance with European standard EN55103-1: 10 A (230 V) (BVM-D9H1U/D9H1E/D9H1A/D9H5U/D9H5E/D9H5A),
20 A (230 V) (BVM-D14H1U/D14H1E/D14H1A/D14H5U/D14H5E/D14H5A)

Power requirements
BVM-D9H1U/D9H1E/D9H1A/
D9H5U/D9H5E/D9H5A:
AC 100 to 240 V, 50/60 Hz, DC $12V^{+5}_{-1}$ V
BVM-D14H1U/D14H1E/D14H1A/
D14H5U/D14H5E/D14H5A:
AC 100 to 240 V, 50/60 Hz

Input/output connectors

Video input/output BNC type × 3 (with loop-through outputs, 75-ohm automatic termination)
R/G/B: 1 Vp-p ±6 dB, positive, high impedance
Y: 1 Vp-p ±6 dB, high impedance
PB/PR: 0.7 Vp-p ±6 dB, high impedance

Sync input/output BNC type × 1 (with loop-through output, 75-ohm automatic termination)
Composite sync: 0.3 to 8 Vp-p, positive/negative tri-level sync signal input or negative bi-level sync signal input, high impedance

Return loss More than 40 dB (10 MHz, with 75-ohm termination)

Remote control OPTION: Mini-DIN 8-pin × 1
CONTROL UNIT:
D-sub 9-pin × 1 (BVM-D9H1U/D9H1E/D9H1A[1], BVM-D14H1U/D14H1E/D14H1A only)
PARALLEL REMOTE 1:
D-sub 9-pin × 1
PARALLEL REMOTE 2:
Modular connector 6-pin
SERIAL REMOTE: D-sub 9-pin × 2[1] (with loop-through output)

Audio input (BVM-D9H5U/D9H5E/D9H5A only)
Phono jack × 3 (with loop-through output)

1) BVM-D9H1U/D9H1E/D9H1A is swithced to REMOTE or CTRL UNIT with the select switch.

Video signal

Frequency response
575/50I, 480/60I component inputs
BVM-D9H1U/D9H1E/D9H1A/
D9H5U/D9H5E/D9H5A/
D14H1U/D14H1E/D14H1A/
D14H5U/D14H5E/D14H5A:
50Hz to 10MHz (0 dB/–3 dB)
Models other than the above or RGB inputs
BVM-D9H1U/D9H1E/D9H1A/
D9H5U/D9H5E/D9H5A:
48 Hz to 17 MHz, (1 dB/ –3 dB)
BVM-D14H1U/D14H1E/
D14H1A/D14H5U/D14H5E/
D14H5A:
48 Hz to 24 MHz, (0 dB/ –3 dB)

Aperture compensation[2]
OFF: 0 dB
ON: 2 dB to 6 dB
575/50I, 480/60I inputs: 5 MHz
Input other than the above: 16 MHz

Picture performance

Normal scan 5% overscan of CRT effective screen area (adjustable range greater than ±15%)

Underscan 3% underscan of CRT effective screen area (adjustable range greater than ±15%)

Linearity Within a central area bounded by a circle with a diameter equal to the picture height, less than 1.0 % of the picture height, and outside the same area, about 2.0 % of the picture height

Color temperature
D93, D65 (adjustable to other color temperatures)

Convergence error
Within a central area bounded by a circle with a diameter equal to the picture height.
Less than 0.4 mm with a central area bounded by a circle and less than 0.7 mm at any other point.

Standard luminescence
120 cd/m² (at standard 1 Vp-p 100% white signal)

Raster size stability
Less than 1% of picture height (at 120 cd/m² peak luminescence, 10 to 90% APL)

Resolution (at screen center, 120 cd/m² luminescence)
BVM-D9H1U/D9H1E/D9H1A/
D9H5U/D9H5E/D9H5A:
340 TV lines (16:9)
450 TV lines (4:3)
BVM-D14H1U/D14H1E/D14H1A/
D14H5U/D14H5E/D14H5A:
600 TV lines (16:9)
800 TV lines (4:3)

Operating conditions

Temperature	0°C to 35°C (32°F to 95°F)
Optimum temperature	20°C to 30°C (68°F to 86°F)
Humidity	0% to 90% (no condensation)
Pressure	700 hPa to 1060 hPa

Storage and transport conditions

Temperature	–10°C to 40°C (14°F to 104°F)
Humidity	0% to 90%
Pressure	700 hPa to 1060 hPa

2) The aperture cannot be compensated for RGB input signals.

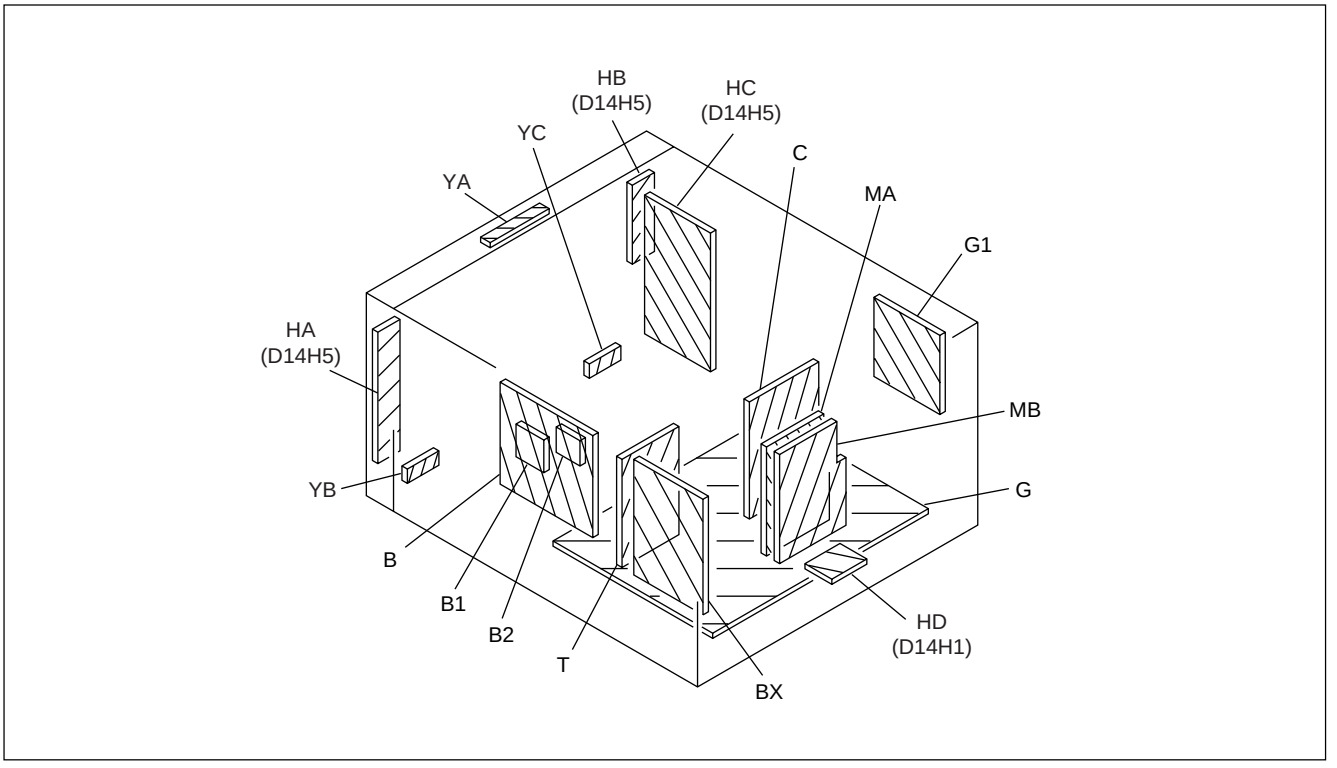
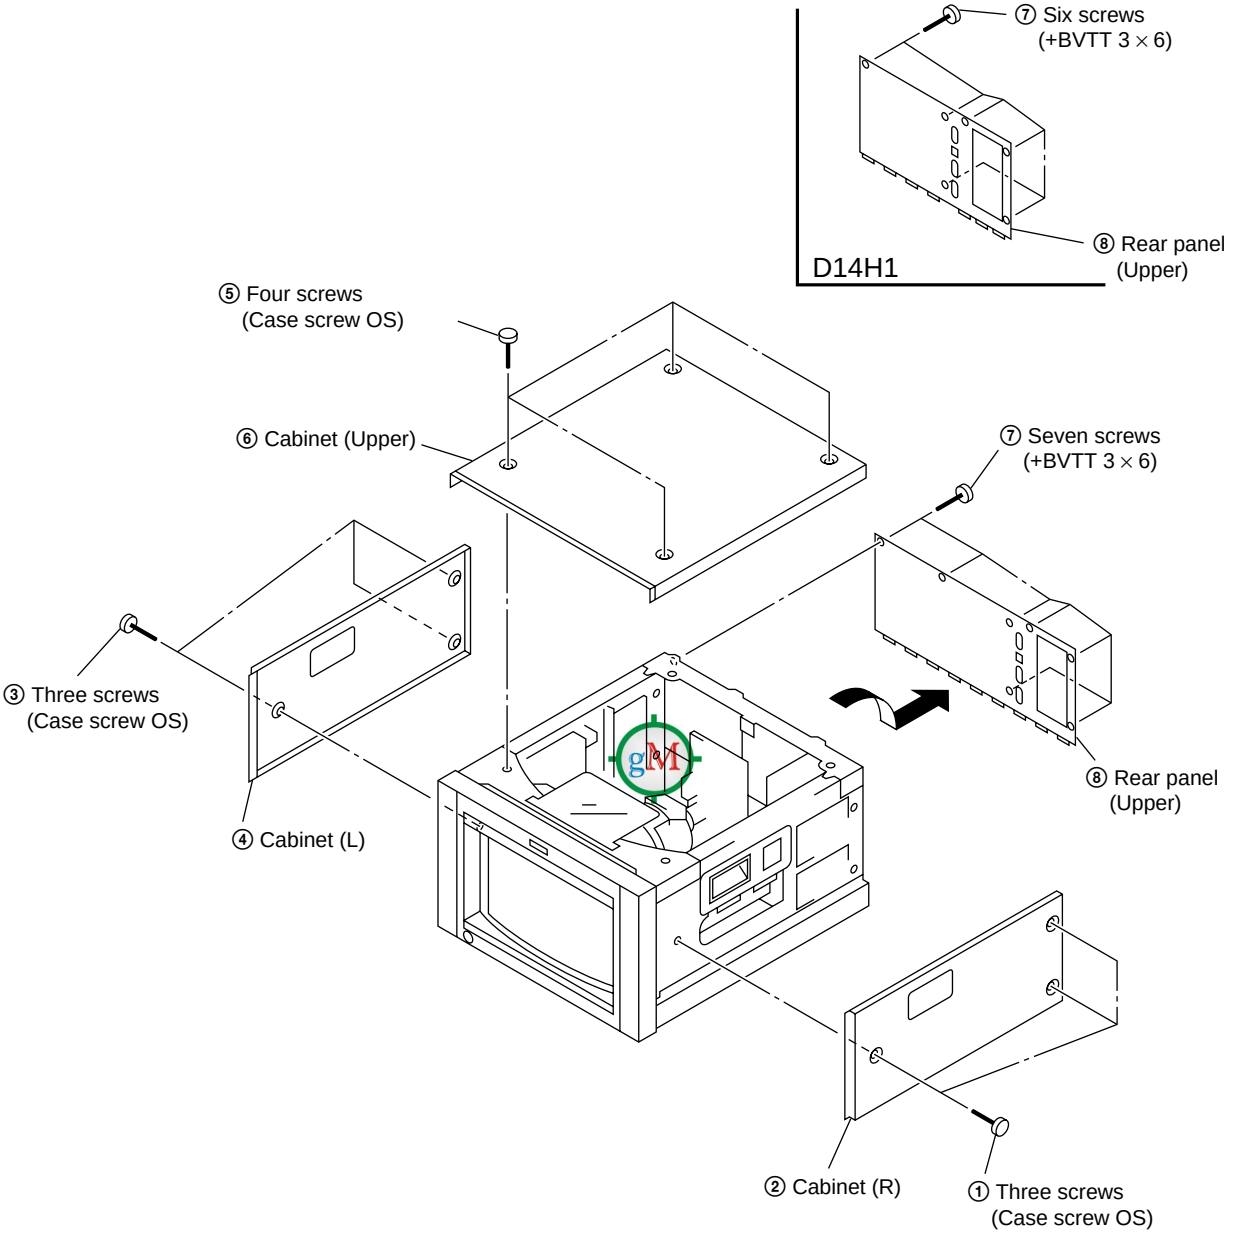
Service Informations

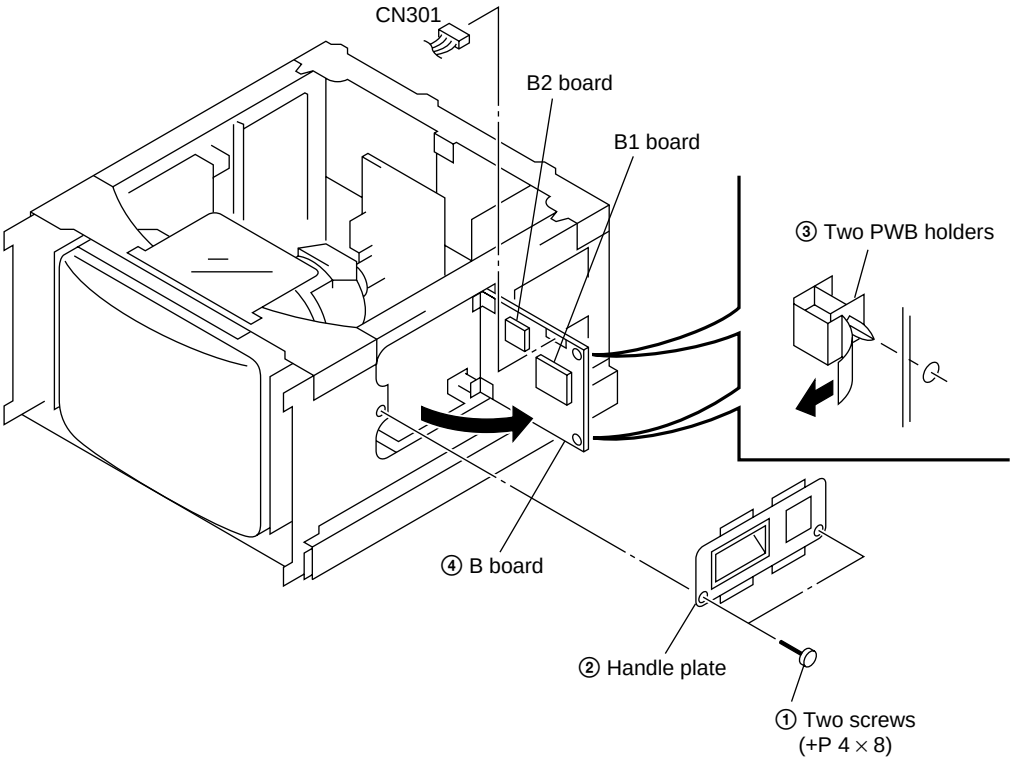
2-1. Circuit Boards Location



2-2-1. Cabinet and Rear Panel Removal

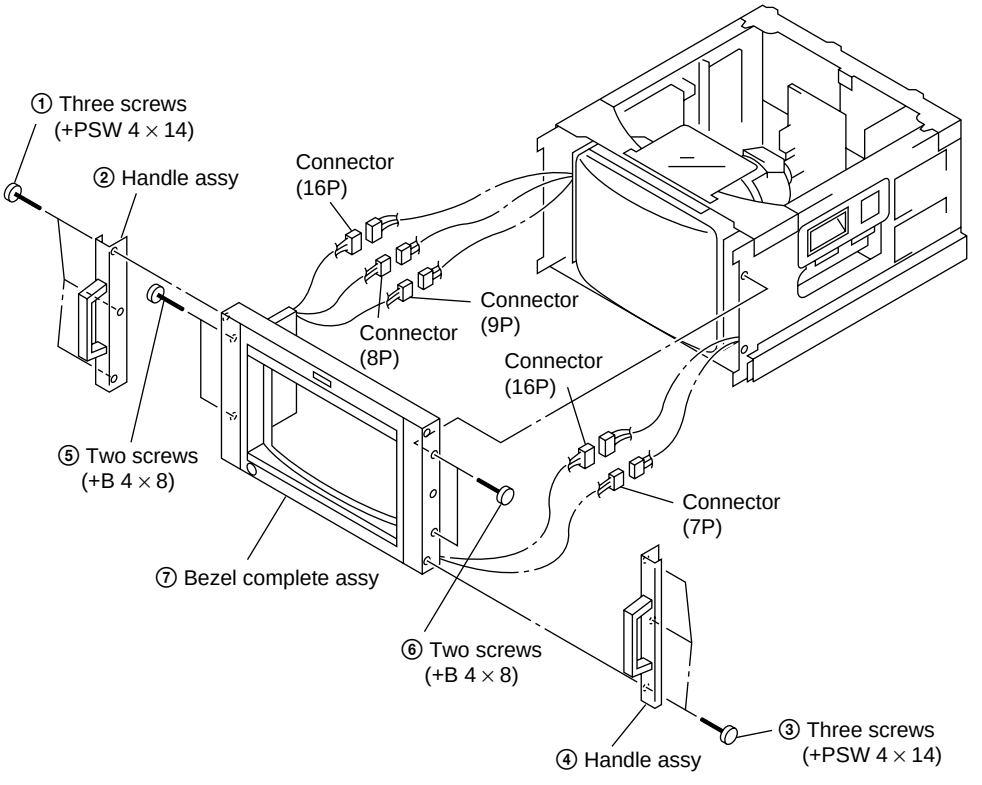


2-2-2. How To Open The B Board

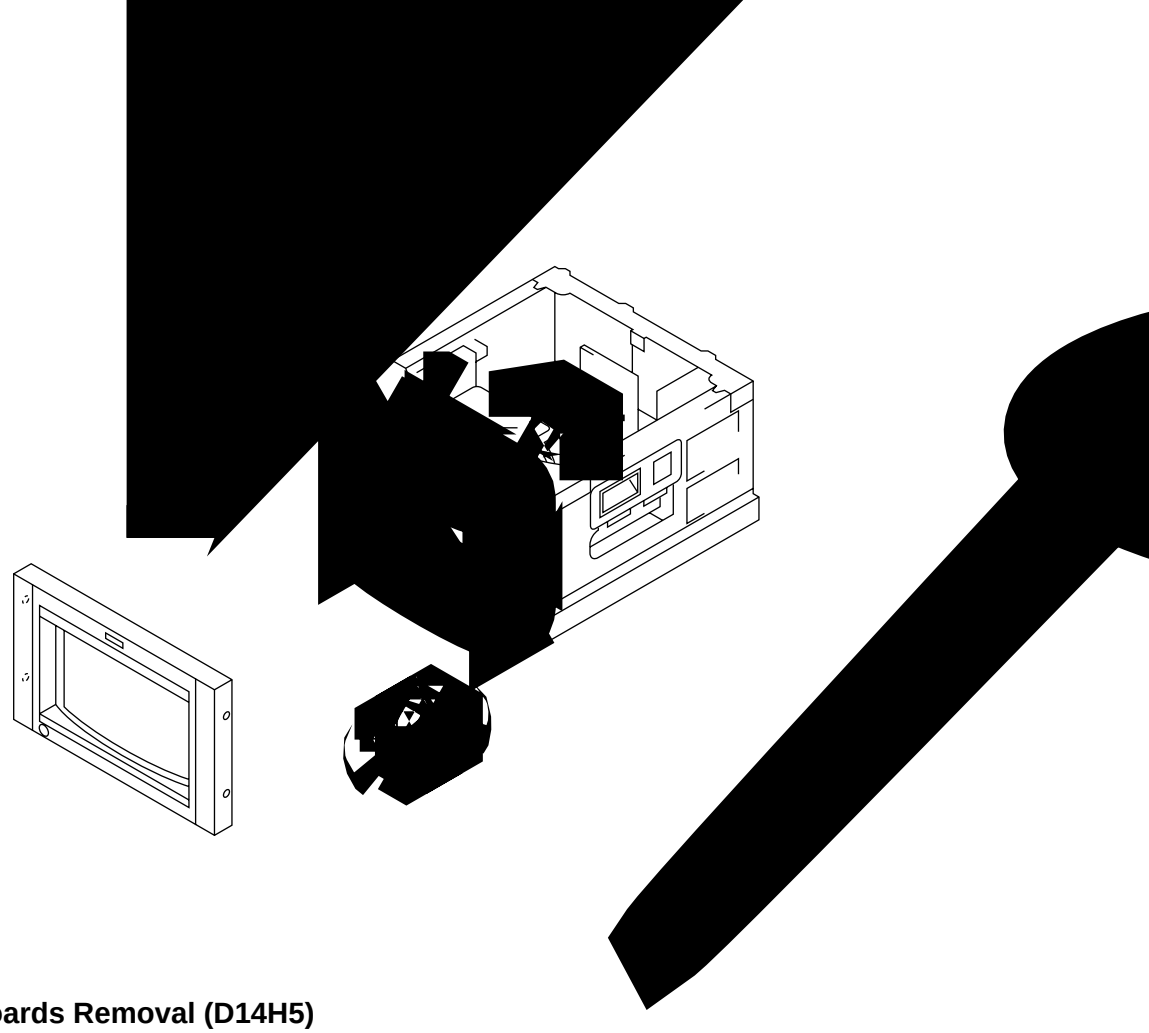


2-2-3. Bezel Complete Assy Removal

(1) D14H5

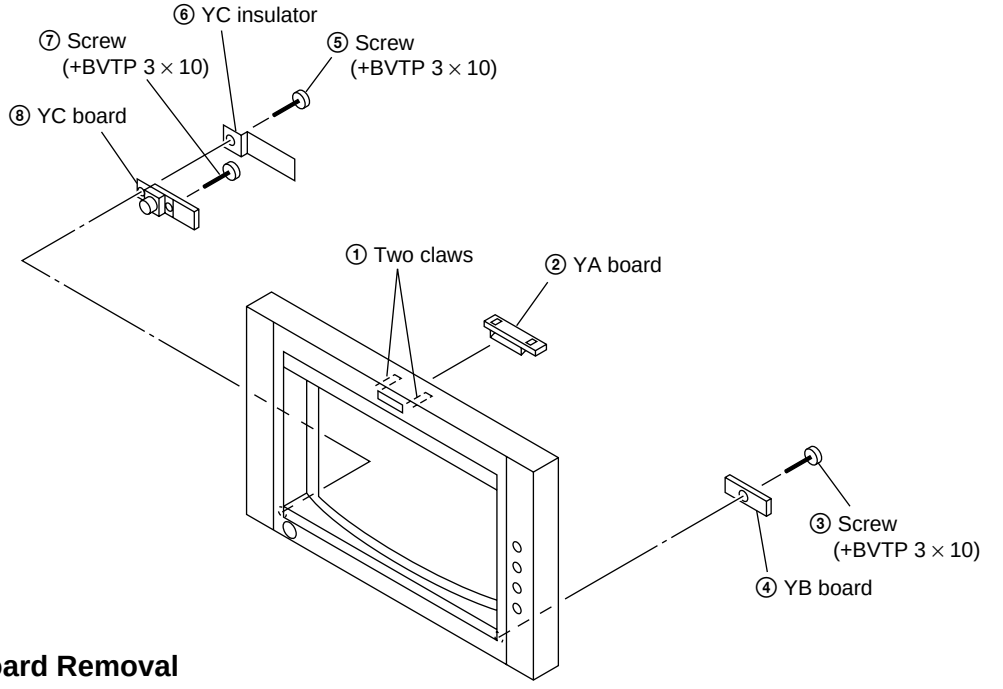


(2) D14H1

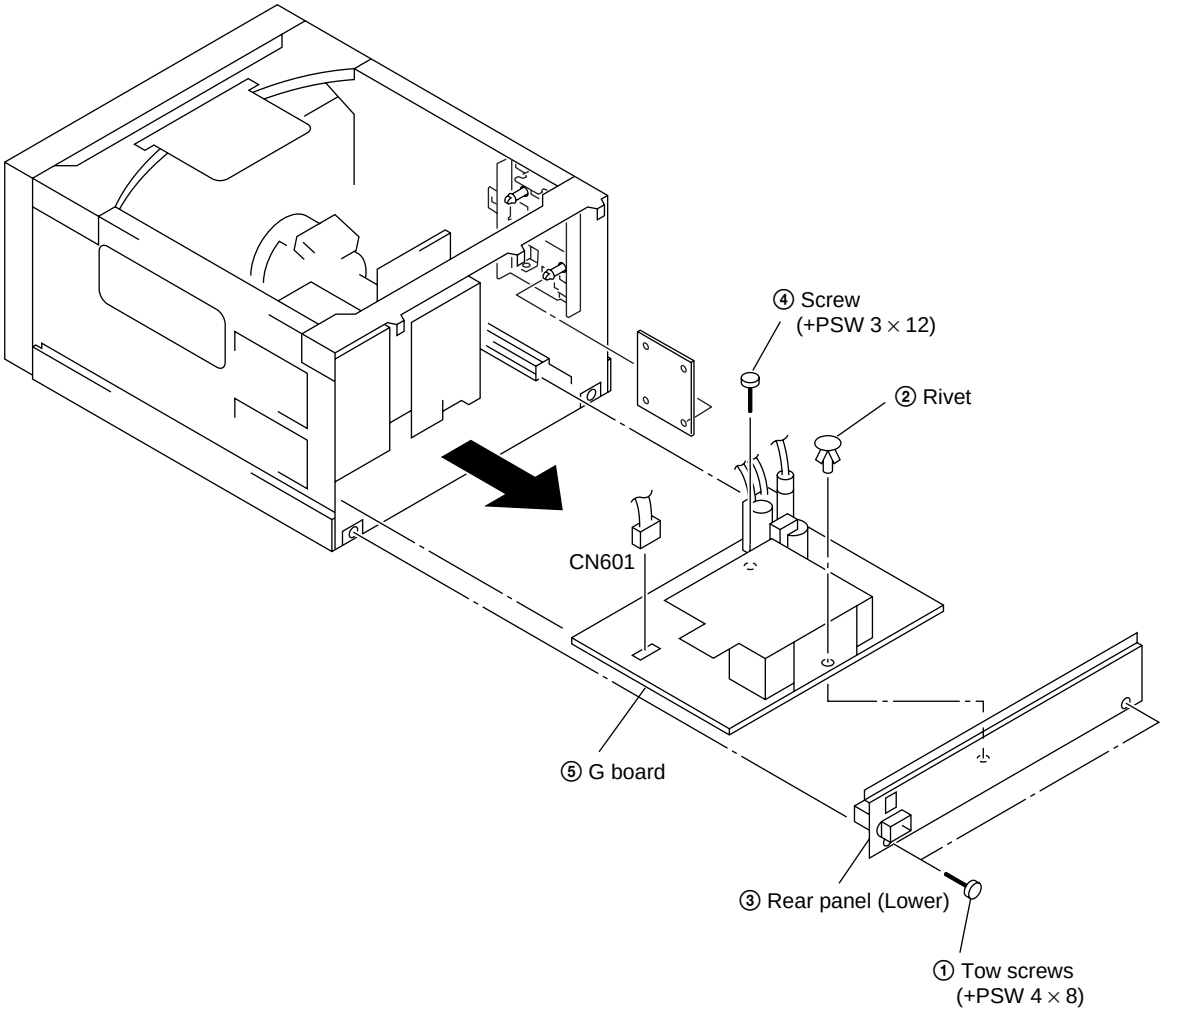


2-2-4. HA, HB and HC Boards Removal (D14H5)

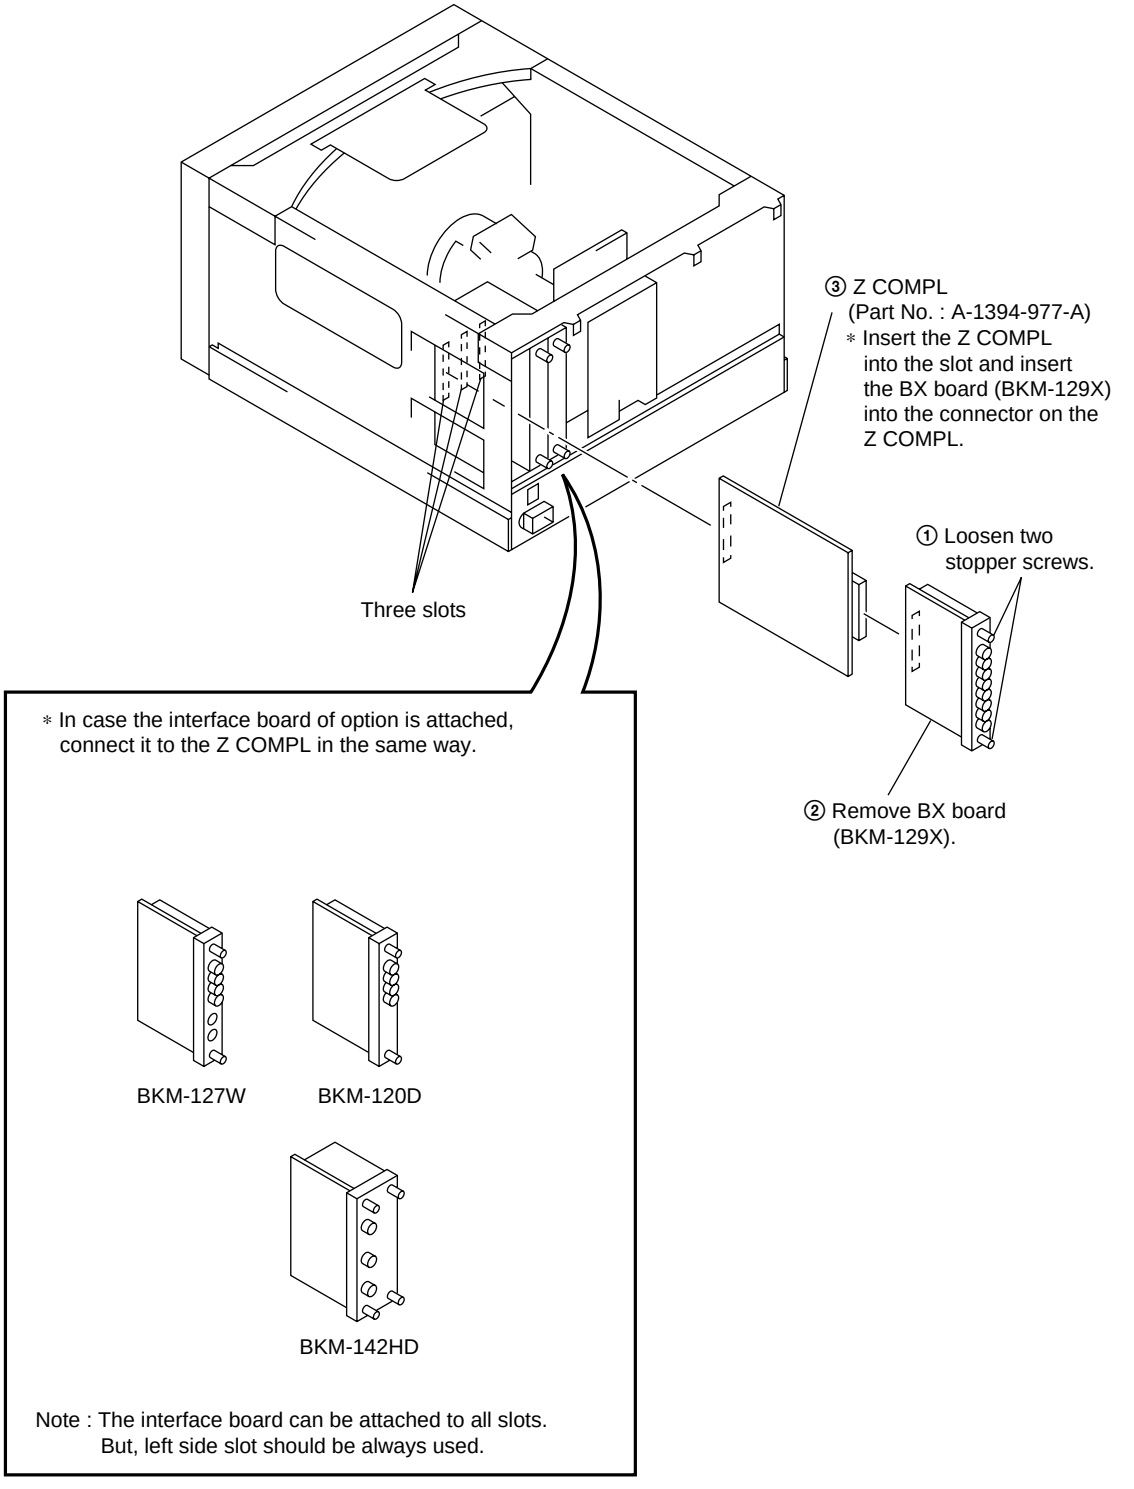
2-2-5. YA, YB and YC Boards Removal



2-2-6. G Board Removal

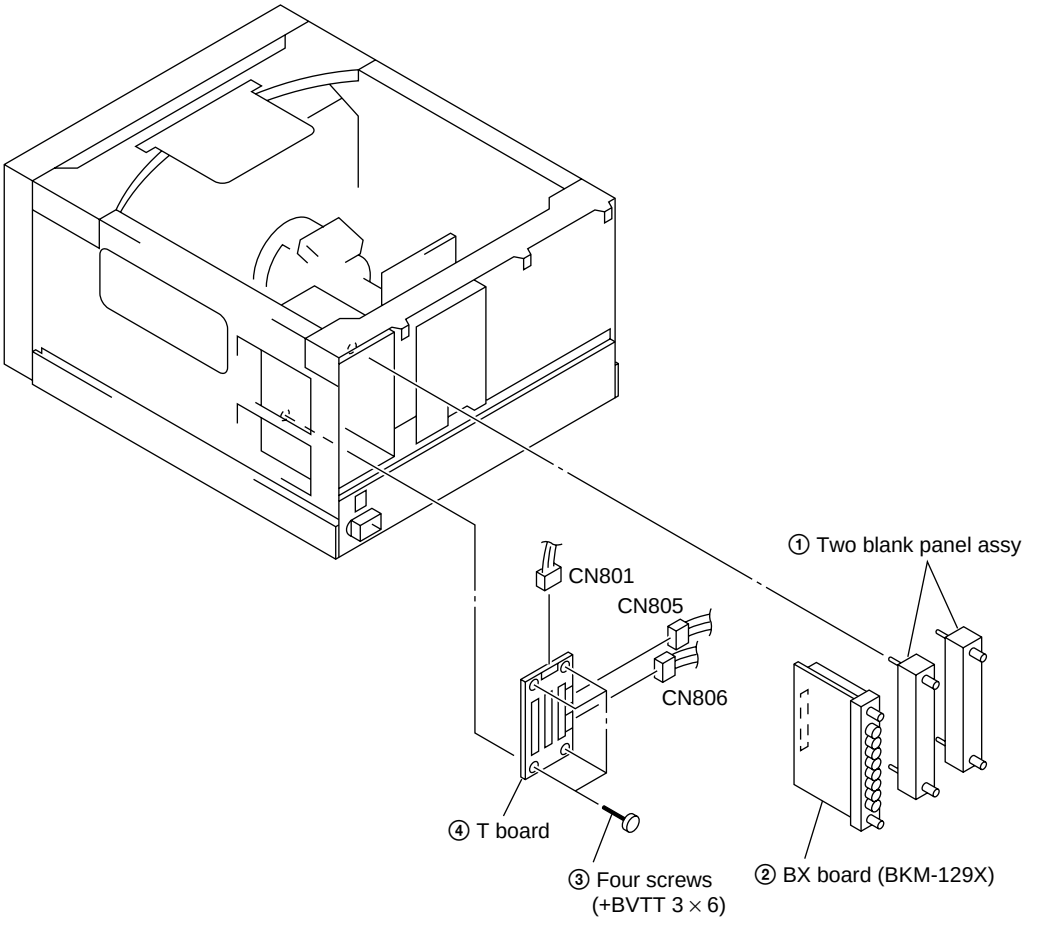


2-2-7. BX Board (BKM-129X) Removal and Check

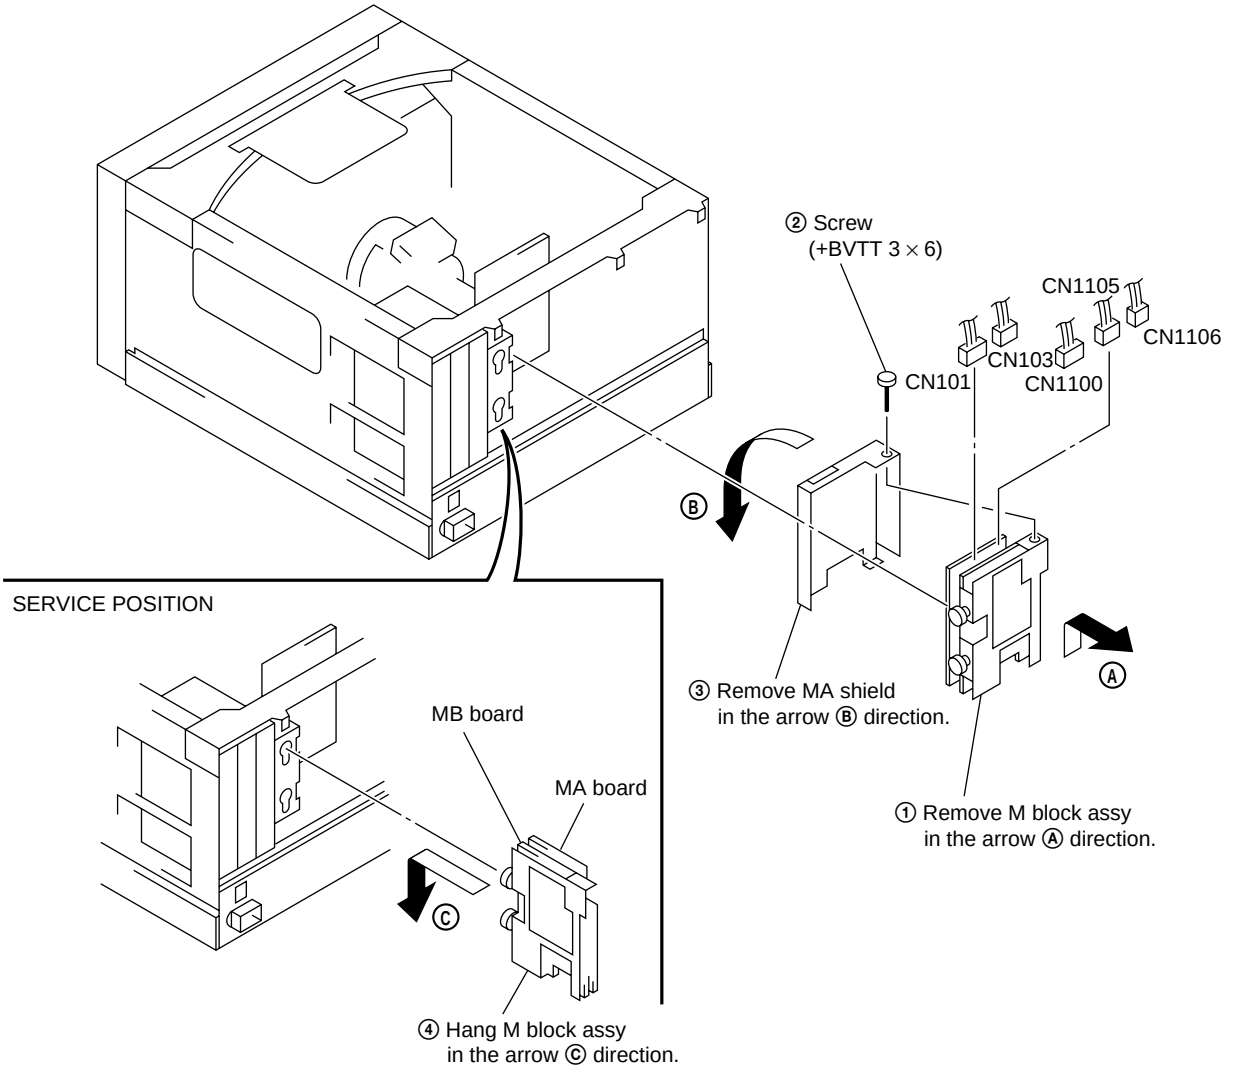


http://getMANUAL.com

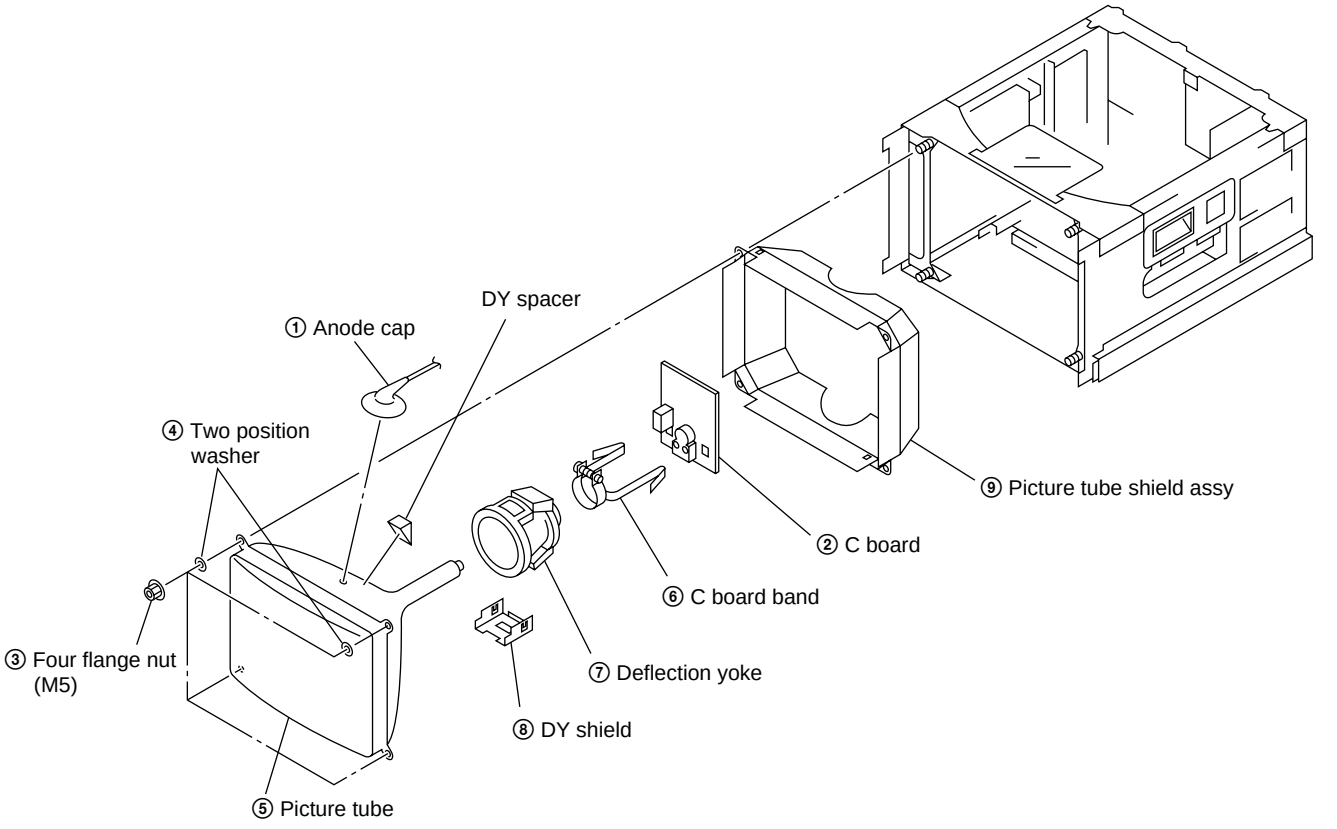
2-2-8. T Board Removal



2-2-9. M Block Assy (MA and MB Boards) Removal



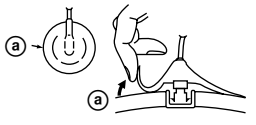
2-2-10. Picture Tube Removal



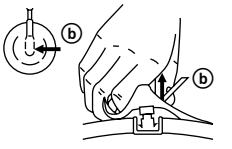
• REMOVAL OF ANODE CAP

Note: To eliminate electric shock hazard, when replacing the picture tube, short-circuit the anode of the picture tube and the high-voltage terminal of anode cap to the picture tube shield or carbon painted on the picture tube, after removing the anode.

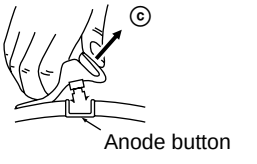
• Removal Procedure



(1) Turn up one side of the rubber cap in the direction indicated by arrow ⓐ.



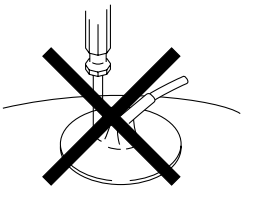
(2) Using a thumb, pull up the rubber cap firmly in the direction indicated by arrow ⓑ.

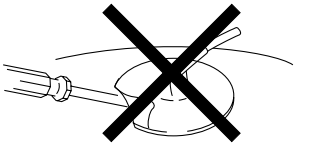


(3) When one side of the rubber cap is separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling up it in the direction of the arrow ⓒ.

• Handling Precautions

(1) Do not scratch the surface of anode cap with a sharp object.
(2) Do not press the rubber so hard that it damages the inside of anode caps. A shatter-hook terminal is built into the rubber.
(3) Do not turn the foot of the rubber over.
The shatter-hook terminal will stick out or damage the rubber.





Section 3
Set-Up Adjustments

3-1. Set-Up Adjustment When CRT is Replaced

This section describes the adjustments to be performed when the CRT is replaced.

[Preparations]

• Required tools and measuring instruments

1. Signal generator
   YPB/YPR signal generator
   - •1080/60i (1125) : SMPTE 274M standard/ BTA S-001 standard
   - •1035/60i (1125) : BTA S-001 standard
   - •720/60p : SMPTE 296M standard
   - •480/60p (525P) : SMPTE 293M standard
   - •480/60i (525) : ITU601
   - •1080/48i (1125) : —
   - •1080/50i (1125) : SMPTE 274M standard
   - •720/50p : —
   - •575/50p (625P) : —
   - •575/50i (625) : ITU601

   NTSC analog composite signal generator
   HD SDI signal generator
   D1 SDI signal generator
2. BKM-127W (NTSC/PAL input adapter)
3. BKM-142HD (HD SDI input adapter)
4. BKM-120D (D1 SDI input adapter)
5. Oscilloscope
6. Luminance meter
7. Color analyzer (Minolta CA-100)
8. Cable of the following specifications to connect the RS-232C terminal of the CA-100 and the OPTION terminal of the monitor.

HDM option connector side
Mini DIN 8-pin

H SYNC	1
V SYNC	2
RTS	3
GND	4
NC	5
TXD	6
+5V	7
RXD	8

CA-100 RS-232C connector side

3	RXD
4	RTS
5	CTS
6	NC
7	GND
8	NC
9 – 19	NC
20	DTR
21 – 25	NC

• Setting the INPUT CONFIGURATION menu

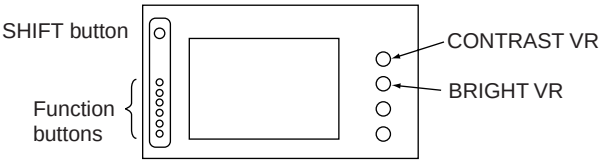
Set the INPUT CONFIGURATION menu of the SETUP menu as shown below unless otherwise specified.

FORMAT ..... YPBPR
SLOT NO 1
INPUT NO 1
SYNC MODE ..... INT
APEARTURE VALUE 100
CHANNEL NAME ..... PROG
COLOR TEMP ..... STD
H PHASE 000
MARKER PHASE 000
MARKER WIDTH 000

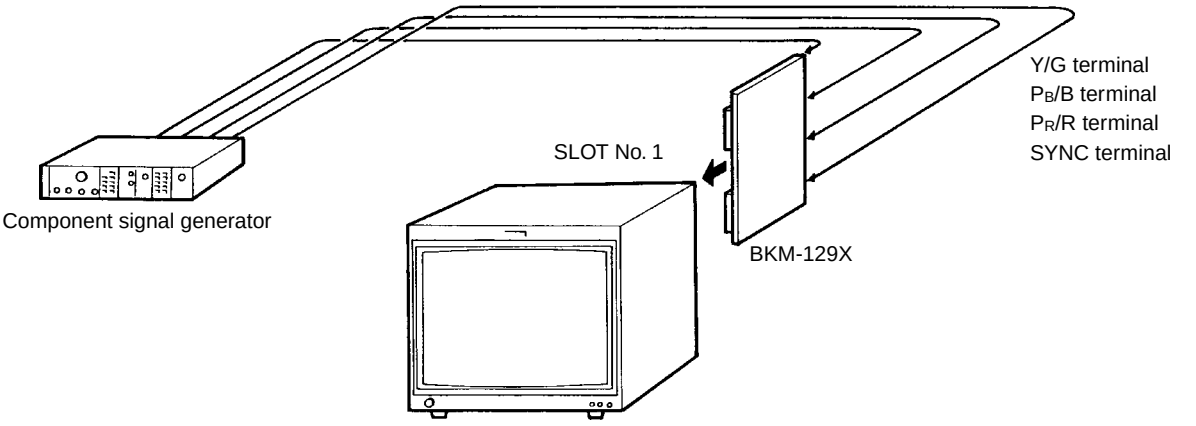
• Operate the SYSTEM CONFIG menu as follows.

Use the SYSTEM menu to select ALL SYSTEM with the RE-LOAD FACTORY DATA, and execute it.

BVM-D14H1/D14H5 control panel



- **Connection diagram**



BVM-D14H1U/D14H5U/D14H1E/D14H5E/D14H1A/D14H5A

[Focus Adjustment]

1. Connect the 1080/60i cross-hatch signal (see note) to the ANALOG Y/G input connector.
   Note: This is the 1125 (1080) cross-hatch signal.
2. Press the SHIFT button to set the SHIFT OFF. [The LED (orange) on top of the button turns off.] Press the UNDER SCAN button (▭) to its OFF position to select the normal mode. [The green LED turns on.]
3. Set the initial (default) value to the following DF adjustment data.
   FOCUS AMP : 27
   FOCUS KEY : 07
   Note: This menu is located in the directory under the DEFLECTION menu of the MAINTENANCE menu.
4. Adjust the FOUCS 1 control (horizontal focus adjustment) and the FOUCS 2 control (vertical focus adjustment) until the center of the screen has the optimum focus.
5. Connect the 1080/60i monoscope signal to the ANALOG Y/G input connector.
6. Check that the horizontal resolution higher than the specifications can be recognized.
   Specifications: 600 TV lines or more
7. Connect the 1080/60i cross-hatch signal to the ANALOG Y/G input connector.
8. Adjust the following DF adjustment data until the thickness of the cross-hatch lines at the corners of picture have the same thickness as those in the center of screen.
   FOCUS AMP
   FOCUS KEY
   Note: If the uniformity is extremely poor, compromise so that the FOCUS AMP is not adjusted to the best focus but is adjusted to obtain the reasonable uniformity and good focus at the same time.
9. Copy the adjustment data that is obtained in step 8 to the MODE2 to MODE4, MODE7 to MODE10, MODE15 to MODE18, MODE21 to MODE24, MODE29 to MODE32 in this order.
10. Connect the 480/60i cross-hatch signal (see note) to the ANALOG Y/G input connector.
    Note: NTSC cross-hatch signal
11. Adjust the following DF adjustment data until the thickness of the cross-hatch lines at the corners of picture have the same thickness as those in the center of screen.
    FOCUS AMP
    FOCUS KEY
    Note: If the uniformity is extremely poor, compromise so that the FOCUS AMP is not adjusted to the best focus but is adjusted to obtain the reasonable uniformity and good focus at the same time.
12. Copy the adjustment data that is obtained in step 11 to the MODE11, MODE12, MODE14 and MODE25 to MODE28 in this order.
13. Connect the 720/60p cross-hatch signal to the ANALOG Y/G input connector.
14. Adjust the following DF adjustment data until the thickness of the cross-hatch lines at the corners of picture have the same thickness as those in the center of screen.
    FOCUS AMP
    FOCUS KEY
    Note: If the uniformity is extremely poor, compromise so that the FOCUS AMP is not adjusted to the best focus but is adjusted to obtain the reasonable uniformity and good focus at the same time.
15. Copy the adjustment data that is obtained in step 14 to the MODE6, MODE19 and MODE20 in this order.

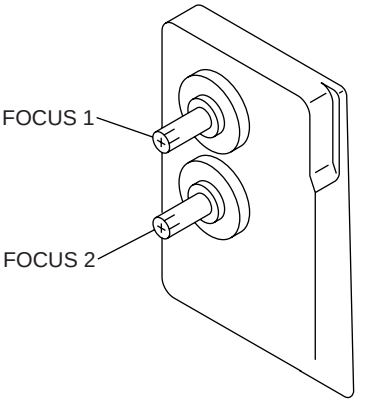


Fig. 1-1

(1) 60 Hz system

Mode	Signal format	Screen mode		Adjustment procedure
MODE1	1080/60i	16 : 9	NORMAL	Perform the adjustment of step 1 to step 8.
MODE2	(1125)		UNDER SCAN	Copy the MODE 1 data.
MODE3	1035/60i	16 : 9	NORMAL	
MODE4	(1125)		UNDER SCAN	
MODE5	720/60p	16 : 9	NORMAL	Perform the adjustment of step 10 to step 11.
MODE6			UNDER SCAN	Copy the MODE 5 data.
MODE7	480/60p	16 : 9	NORMAL	Copy the MODE 1 data.
MODE8	(525)		UNDER SCAN	
MODE9		4 : 3	NORMAL	
MODE10			UNDER SCAN	
MODE11	480/60i	16 : 9	NORMAL	Copy the MODE 13 data.
MODE12	(525)		UNDER SCAN	
MODE13		4 : 3	NORMAL	Perform the adjustment of step 10 to step 11.
MODE14			UNDER SCAN	Copy the MODE 13 data.

(2) 50 Hz system

Mode	Signal format	Screen mode		Adjustment procedure
MODE15	1080/48i	16 : 9	NORMAL	Copy the MODE 1 data.
MODE16	(1125)		UNDER SCAN	
MODE17	1080/50i	16 : 9	NORMAL	Copy the MODE 1 data.
MODE18	(1125)		UNDER SCAN	
MODE19	720/50p	16 : 9	NORMAL	Copy the MODE 5 data.
MODE20			UNDER SCAN	
MODE21	575/50P	16 : 9	NORMAL	Copy the MODE 1 data.
MODE22	(625)		UNDER SCAN	
MODE23		4 : 3	NORMAL	
MODE24			UNDER SCAN	
MODE25	575/50i	16 : 9	NORMAL	
MODE26	(625)		UNDER SCAN	
MODE27		4 : 3	NORMAL	Copy the MODE 13 data.
MODE28			UNDER SCAN	

[Landing Adjustment]

1. Connect the 480/60i entire-white signal (see note) to the ANALOG Y/G input connector.
   Note: This is the NTSC entire-white signal.
2. Press the SHIFT button to ON. [The LED (orange) on top of the button turns on.]
3. Press the 16:9 button to the OFF position to set the 4:3 mode. [The LED (orange) on top of the button turns off.]
4. Direct the CRT screen toward east (or west). Press the DEGAUSS button.
5. Set the Purity knob in the mechanical center.

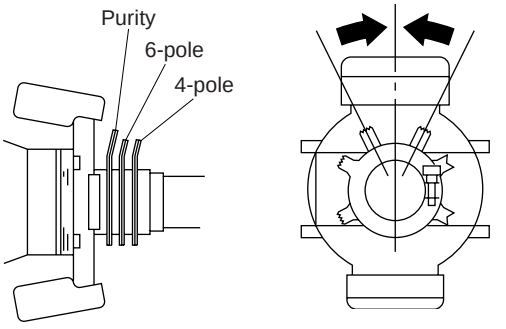

Fig. 1-2

6. Push the DY (deflection yoke) to the front as far as it can go.
7. Fix the neck assembly in the position as shown in Fig. 1-3.

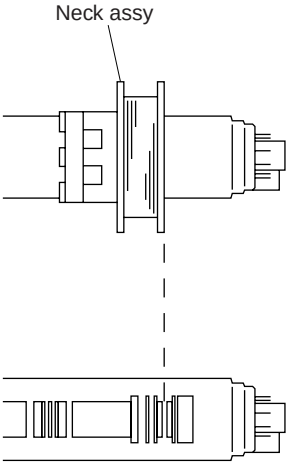

Fig. 1-3

8. Change the screen display to all green only as follows. [While the SFHIT is ON (the orange LED on the SHIFT button turns on), press the R and B button to ON. (The orange LED on the SHIFT button turns on.)]
9. Adjust the Purity knob until green comes to the center of the display as shown in Fig. 1-4.

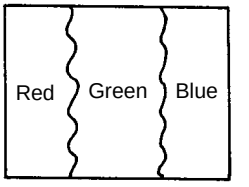

Fig. 1-4

10. Move back the DY so that the entire screen shows the green only.
11. Connect the 480/60i cross-hatch signal (see note) to the ANALOG Y/G input connector.
    Note: This is the NTSC cross-hatch signal.
12. Adjust the DY inclination. After DY inclination adjustment is complete, tighten the DY fixing screw.
13. Fix the deflection yoke (DY) using the three DY spacers.

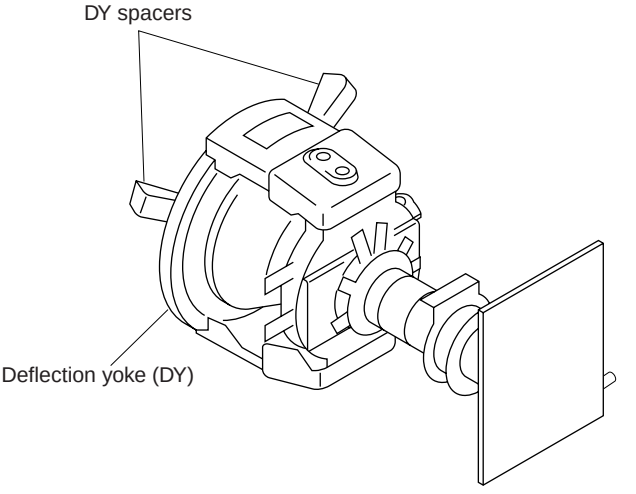

Fig. 1-5

- Final adjustment
  When the adjustment is complete, check that mis-landing (landing error) does not occur even when the monitor is directed in all directions of east, west, south and north.

[H Blanking Adjustment]

• Preparation

1. Connect the monoscope signal of the signal formats that are shown in the following table, to the ANALOG Y/G input connector. Perform the H blanking adjustment in the respective screen modes using the respective signal formats.

60 Hz system

Mode	Signal format	Screen mode	
MODE1	1080/60i	16 : 9	NORMAL
MODE2	(1125)		UNDER SCAN
MODE3	1035/60i	16 : 9	NORMAL
MODE4	(1125)		UNDER SCAN
MODE5	720/60p	16 : 9	NORMAL
MODE6			UNDER SCAN
MODE7	480/60p	16 : 9	NORMAL
MODE8	(525)		UNDER SCAN
MODE9		4 : 3	NORMAL
MODE10			UNDER SCAN
MODE11	480/60i	16 : 9	NORMAL
MODE12	(525)		UNDER SCAN
MODE13		4 : 3	NORMAL
MODE14			UNDER SCAN

50 Hz system

Mode	Signal format	Screen mode	
MODE15	1080/48i	16 : 9	NORMAL
MODE16	(1125)		UNDER SCAN
MODE17	1080/50i	16 : 9	NORMAL
MODE18	(1125)		UNDER SCAN
MODE19	720/50p	16 : 9	NORMAL
MODE20			UNDER SCAN
MODE21	575/50P	16 : 9	NORMAL
MODE22	(625)		UNDER SCAN
MODE23		4 : 3	NORMAL
MODE24			UNDER SCAN
MODE25	575/50i	16 : 9	NORMAL
MODE26	(625)		UNDER SCAN
MODE27		4 : 3	NORMAL
MODE28			UNDER SCAN

2. Increase the brightness by adjusting the BRIGHT control so that blanking becomes visible on screen.
   Note: The following adjustment menus are located in the directory under the DEFLECTION menu of the MAINTENANCE menu.
   H BLK LEFT H CENT
   H BLK RIGHT H PHASE
   H SIZE

• H. Blanking Adjustment

1. Press the SHIFT button to ON. [The LED (orange) on top of the button turns on.]
2. To select the 4:3 mode of the adjustment, press the 16:9 OFF button [to turn off the LED (orange)] to select the 4:3 mode.
   To select the 16:9 mode of the adjustment, press the 16:9 ON button [to turn on the LED (orange)] to select the 16:9 mode.
3. Press the SHIFT button to OFF. [The LED (orange) on top of the button turns off.]
4. To select the NORMAL mode of adjustment, press the UNDER SCAN button (▣) to its OFF position to select the normal mode. [The green LED turns off.]
   To select the UNDER SCAN mode of adjustment, press the UNDER SCAN button (▣) to its ON position to select the under scan mode. [The green LED turns on.]
5. Set the following adjustment data to adjustment points as shown below.
   H BLK LEFT : 255
   H BLK RIGHT : 0
6. Adjust the H SIZE data so that the entire raster area is visible on screen.
7. Adjust the H CENTER data so that the raster is position just in the center of the screen (so that A ≒ B). (Fig. 1-6)

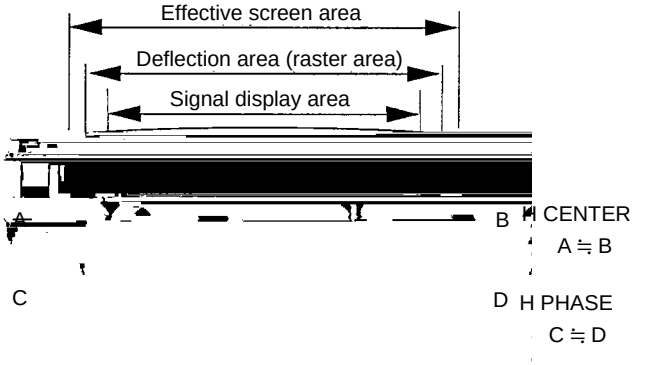

Fig. 1-6

http://getMANUAL.com

8. Adjust the H PHASE data so that the monoscope picture is positioned just in the center of the raster (so that C ≒ D).
9. Adjust the H BLK RIGHT data so that the horizontal blanking is positioned 0 to 2 mm outside the right end of the monoscope signal display area. (Fig. 1-7)
10. Adjust the H BLK LEFT data so that the horizontal blanking is position 0 to 2 mm outside the left end of the monoscope signal display area. (Fig. 1-7)
11. Return the H SIZE data to the original data size.

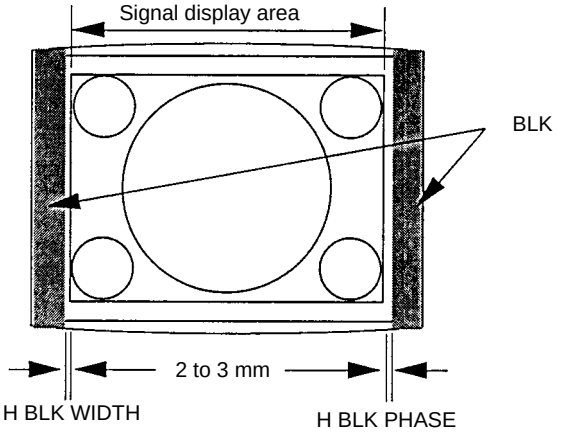

Fig. 1-7

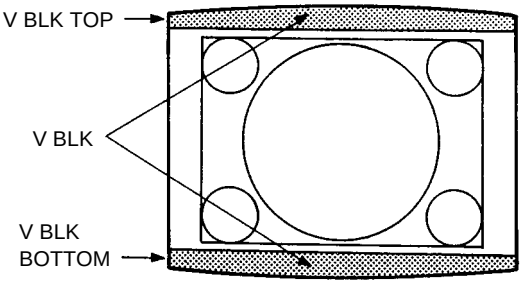

Fig. 1-8

[V Blanking Adjustment]

• Preparation

1. Connect the monoscope signal of the signal formats that are shown in the following table, to the ANALOG Y/G input connector. Perform the V blanking adjustment in the respective screen modes using the respective signal formats.

60 Hz system

Mode	Signal format	Screen mode	
MODE9	480/60p (525)	4 : 3	NORMAL
MODE13	480/60i (525)	4 : 3	NORMAL

50 Hz system

Mode	Signal format	Screen mode	
MODE23	575/50p (625)	4 : 3	NORMAL
MODE27	575/50i (625)	4 : 3	NORMAL

2. Increase the brightness by adjusting the BRIGHT control so that blanking becomes visible on screen.
   Note: The following adjustment menus are located in the directory under the DEFLECTION menu of the MAINTENANCE menu.
   V BLK TOP
   V BLK BOTTOM
   V SIZE
   V CENT

• V Blanking Adjustment

1. Press the SHIFT button to ON. [The LED (orange) on top of the button turns on.]
2. Press the 16:9 OFF button [to turn off the LED (orange)] to select the 4:3 mode.
3. Press the SHIFT button to OFF. [The LED (orange) on top of the button turns off.]
4. Press the UNDER SCAN button (▭) to its ON position to select the under scan mode. [The green LED turns on.]
5. Adjust the V SIZE data so that the 5% over-scan is obtained.
6. Take note of the present V CENT data. After noting present V CENT data, adjust V CENT so that the top of the raster becomes visible.
7. Adjust the V BLK TOP data so that the vertical blanking on top of the screen is positioned as closest as possible to the signal display area.
8. Adjust V CENT so that the bottom of the raster becomes visible.
9. Adjust the V BLK BOTTOM data so that the vertical blanking on bottom of the screen is positioned as closest as possible to the signal display area.
10. Return the V CENT data to the original data.

[Linearity Adjustment]

• Linearity Adjustment (1)

1. Connect the 1080/60i (1125) cross-hatch signal to the ANALOG Y/G input connector.
2. Press the SHIFT button to ON. [The LED (orange) on top of the button turns on.]
3. Press the 16:9 ON button [to turn on the LED (orange)] to select the 16:9 mode.
4. Press the SHIFT button to OFF. [The LED (orange) on top of the button turns off.]
5. Press the UNDER SCAN button (▣) to its OFF position to select the normal mode. [The green LED turns off.]
6. Check that the picture is not slanted, that there are no top and bottom PIN distortion and horizontal trapezoidal distortion.

   Slanted picture:

   Adjust inclination of the DY.

   Horizontal PIN distortion:

   Adjust upper and lower neck twist of the DY.

   Horizontal trapezoidal distortion:

   Adjust TLV adjustment control of the DY. (Be careful that the TLV adjustment can deteriorate the convergence.)

• Linearity Adjustment (2)

Note 1) Connect the monoscope signal or the cross-hatch signal having the following signal formats as shown in the table below, to the ANALOG Y/G input connector. Perform the linearity adjustment (2) in the respective screen modes using the respective signal formats.

60 Hz system

MODE	Signal format	Screen mode	
MODE1	1080/60i	16 : 9	NORMAL
MODE2	(1125)		UNDER SCAN
MODE3	1035/60i	16 : 9	NORMAL
MODE4	(1125)		UNDER SCAN
MODE5	720/60p	16 : 9	NORMAL
MODE6			UNDER SCAN
MODE7	480/60p	16 : 9	NORMAL
MODE8	(525)		UNDER SCAN
MODE9		4 : 3	NORMAL
MODE10			UNDER SCAN
MODE11	480/60i	16 : 9	NORMAL
MODE12	(525)		UNDER SCAN
MODE13		4 : 3	NORMAL
MODE14			UNDER SCAN

50 Hz system

MODE	Signal format	Screen mode	
MODE15	1080/48i	16 : 9	NORMAL
MODE16	(1125)		UNDER SCAN
MODE17	1080/50i	16 : 9	NORMAL
MODE18	(1125)		UNDER SCAN
MODE19	720/50p	16 : 9	NORMAL
MODE20			UNDER SCAN
MODE21	575/50P	16 : 9	NORMAL
MODE22	(625)		UNDER SCAN
MODE23		4 : 3	NORMAL
MODE24			UNDER SCAN
MODE25	575/50i	16 : 9	NORMAL
MODE26	(625)		UNDER SCAN
MODE27		4 : 3	NORMAL
MODE28			UNDER SCAN

Note 2) The following adjustment menus are located in the directory under the DEFLECTION menu of the MAINTENANCE menu.
H SIZE
H CENTER
H KEY BAL
H KEY
H PIN BAL
H PIN
H COR S
H COR PIN
H PIN
V SIZE
V CENTER
V LIN AMP
V LIN BAL

1. Connect the monoscope signal to the ANALOG Y/G input connector.
2. Press the SHIFT button to ON. [The LED (orange) on top of the button turns on.]
3. To adjust the 4:3 mode of adjustment, press the 16:9 OFF button [to turn off the LED (orange)] to select the 4:3 mode.
4. Press the SHIFT button to OFF. [The LED (orange) on top of the button turns off.]
5. To select the NORMAL mode of adjustment, press the UNDER SCAN button (▣) to its OFF position to select the normal mode. [The green LED turns off.]
   To select the UNDER SCAN mode of adjustment, press the UNDER SCAN button (▣) to its ON position to select the under scan mode. [The green LED turns on.]
6. Adjust the H CENTER data so that the horizontal center of the picture comes to the horizontal center of the screen.
7. Adjust the V CENTER data so that the vertical center of the picture comes to the vertical center of the screen.
8. Connect the cross-hatch signal to the ANALOG Y/G input connector.
9. Adjust the respective V SIZE, V LIN BAL, V LIN AMP and H SIZE data so that the optimum picture is obtained as shown in Fig. 1-9.
   Note: Do not adjust the V SIZE data when adjusting the MODEs 9, 13, 23 and 27.
10. Adjust the horizontal trapezoidal distortion and horizontal PIN distortion on both sides of picture using the H KEY BAL, H KEY, H PIN BAL and H PIN data respectively as shown in Fig. 1-10.
11. Adjust the corner "S" distortion and the corner PIN distortion on both sides of picture using the H CORS and H COR PIN data respectively as shown in Fig. 1-11.
12. Repeat the above-described steps of the linearity adjustment(2) until the optimum horizontal linearity and vertical linearity are obtained.

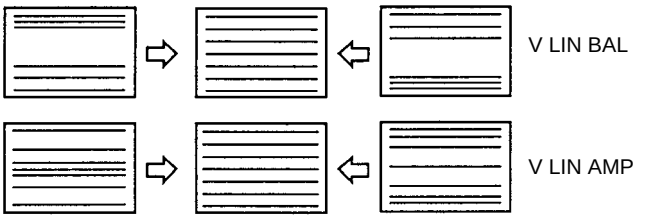

Fig. 1-9

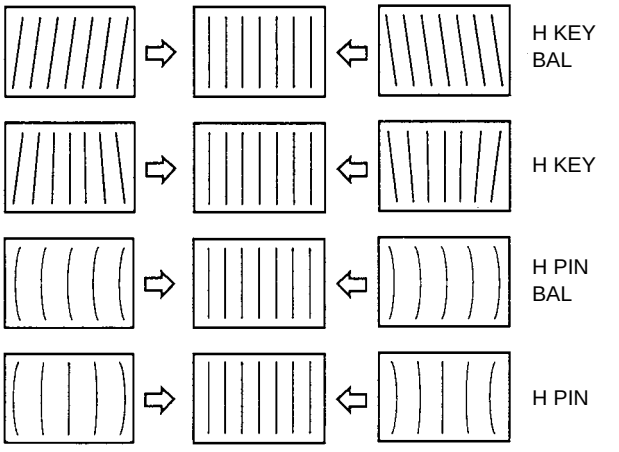

Fig. 1-10

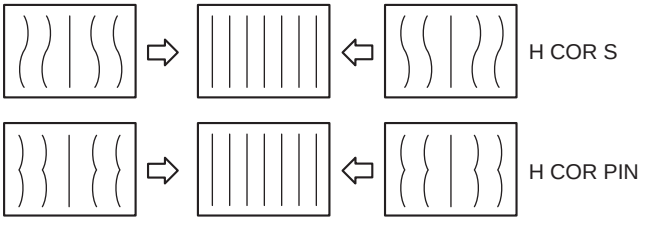

Fig. 1-11

[Convergence Adjustment]

• Preparation

1. Connect the 480/60p cross-hatch signal to the ANALOG Y/G input connector.
2. Press the SHIFT button to ON. [The LED (orange) on top of the button turns on.]
3. Press the 16:9 OFF button [to turn off the LED (orange)] to select the 4:3 mode.
4. Press the SHIFT button to set the SHIFT OFF. [The LED (orange) on top of the button turns off.]
5. Press the UNDER SCAN button (▭) to its OFF position to select the NORMAL mode of adjustment. [The green LED turns off.]

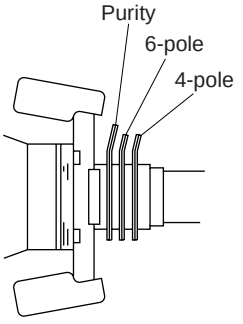

Fig. 1-12

[Static Convergence Adjustment]

• Horizontal Static Convergence Adjustment

1. Adjust RV701 (H. STAT) on the C board so that the red dots and the green dots are correctly converged.
2. When the blue dot is mis-converged with respect to the red and green dots, implement the HMC (horizontal misconvergence) correction by adjusting the 4-pole magnet and the 6-pole magnet of the DY.

• Vertical Static Convergence Adjustment

1. Implement the VMC (vertical misconvergence) correction by adjusting the 4-pole magnet and the 6-pole magnet of the DY.

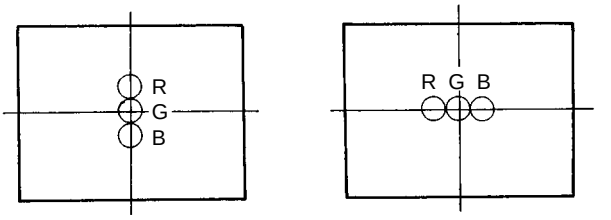

Fig. 1-13

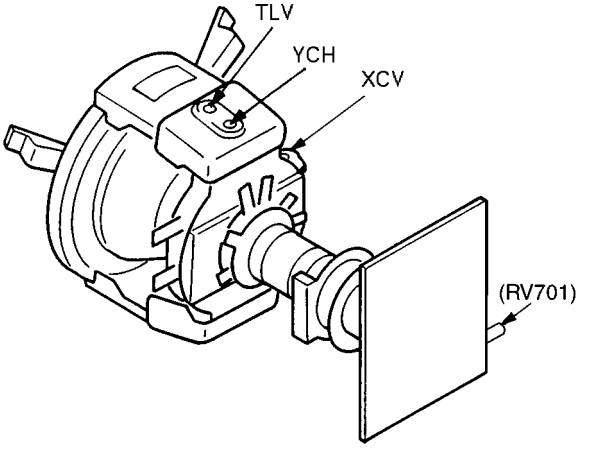

Fig. 1-14

[Dynamic Convergence Adjustment]

1. Minimize the vertical misconvergence in the left-most end of the center of a screen and in the right-most end of the center of a screen by adjusting the DY correction reactor XCV as shown in Fig. 1-15.
2. Minimize the vertical misconvergence in the top of a screen and in the bottom of a screen by adjusting the DY correction reactor YCH as shown in Fig. 1-15.
3. Minimize the vertical misconvergence in the top of a screen and in the bottom of a screen by adjusting the DY correction reactor TLV as shown in Fig. 1-15.
4. Minimize the vertical misconvergence in the left-most end of the center of a screen and in the right-most end of the center of a screen by adjusting the DY correction reactor TLH as shown in Fig. 1-15.

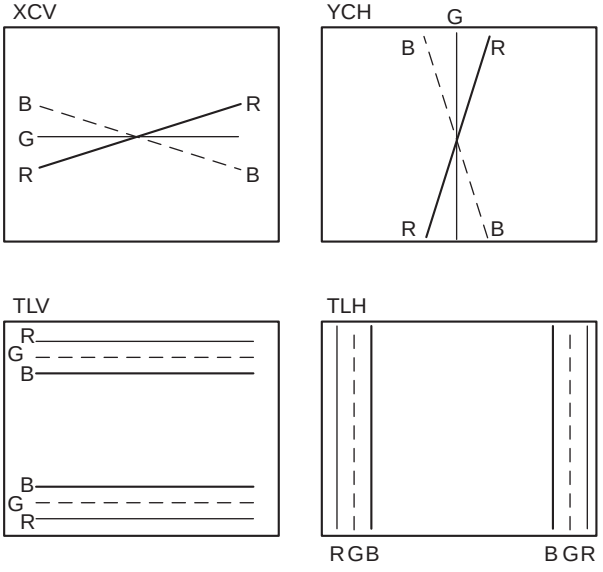

Fig. 1-15

[G2 Adjustment]

1. Connect the 480/60i entire black signal to the ANALOG Y/G input connector.
2. Connect an oscilloscope probe one after another to the C board R-cathode (TP701), G-cathode (TP702) then B-cathode (TP703) to measure the DC voltage at their respective pedestal portion.
3. Connect an oscilloscope to the cathode whose DC voltage of the respective pedestal portion has the highest DC voltage.
4. Adjust RV702 on the C board so that the DC voltage of the respective pedestal portion is 125 ±3 V.

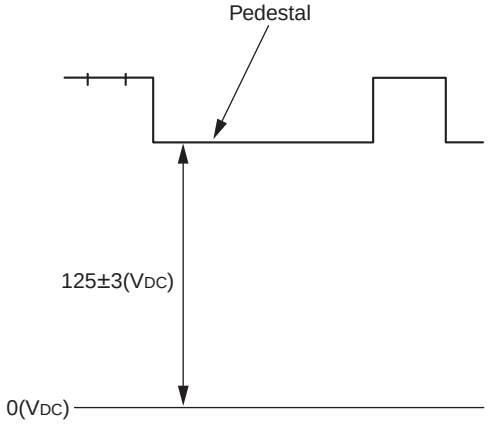

Fig. 1-16

[White Balance Adjustment]

1. Outline of the white balance adjustment and calibration of the color analyzer that is used for the white balance adjustment are described first.

1,1 The parameter that converts the RGB drive voltage of a CRT to the chromaticity coordinate is acquired.

This monitor has the copy function of the color temperature data between two or more monitors.
However, the CRT drive voltage are unique in every monitor because it is different depending on each CRT. Therefore, the same color temperature cannot be obtained in multiple monitors even though the same drive voltage is given to them. It means that the data that is used to copy the color temperature, must be the xyY chromaticity coordinate or similar data that does not depend on each CRT, unlike the CRT drive that depends on each CRT.
When the D93 MANUAL adjustment is implemented using the MAINTENANCE/SYSTEM/COLOR TEMP menu of the SYSTEM CONFIG menu, the parameter that converts the CRT drive voltage to the chromaticity coordinate is created while the adjustment is implemented. This parameter is used when copying the color temperature data to other monitors as shown.

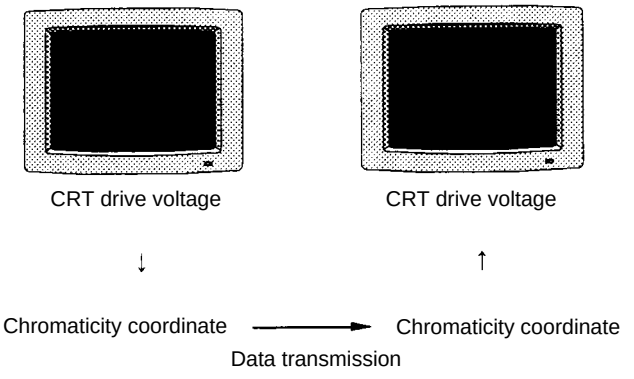

Fig. 1-17

1.2 D65 color temperature adjustment

1.3 Copying the color temperature data to the STD color temperature, COLOR1 color temperature and COLOR2 color temperature.

- On calibration of the color analyzer
  When color temperature of any monitor is measured by two or more color analyzers, these color analyzers show different measurement values even though the object of measurement is the same. Also the measurement value of color analyzer changes as time elapses.
  Therefore, any color analyzer must be calibrated so that it shows the correct measurement value of the following chromaticity coordinate before using the analyzer.

	x	y	y (cd/m^2)
D65	0.313	0.329	2.7
	0.313	0.329	120
D93	0.283	0.297	2.7
	0.283	0.297	120

2. Preparation for Adjustment

2.1 Connect the 480/60i (525) WINDOW signal to the ANALOG Y/G input connector.

2.2 Connect the RS-232C connector of a color analyzer CA-100 with the OPTION connector of a monitor using the cable that is shown by section “3-1. Set-Up Adjustment When CRT is Replaced - Required tools and measuring instruments, item 8”.

2.3 Set up the CA-100 as described below. Attach the measurement probe of the CA-100 to the center of the CRT screen.

Display mode	xyY mode
Baud rate	9600

3. White Balance Adjustment

3.1 White Balance Adjustment (1)

1. Press the SHIFT ON button [to turn on the LED (orange) on top of the SHIFT button]. Press the 16:9 ON button [to turn on the LED (orange)] to select the 16:9 mode.
2. Press the MONO ON button to select the B/W mode. [The green LED turns on.]
3. Select MAINTENANCE menu of the SYSTEM CONFIG menu.
4. Select VIDEO menu of the MAINTENANCE menu.
5. Take note of the SUB CONTRAST data. Then set 100 to the SUB CONTRAST data.
6. Select SYSTEM/COLOR TEMP menu of the MAINTENANCE menu.
7. Select D93 of the SYSTEM/COLOR TEMP menu. Then cover the entire CRT screen surface with a black blind cloth. Select the MANUAL adjustment item and adjust the white balance until the following value is obtained.
   x = 0.283
   y = 0.297
8. Select D65 of the SYSTEM/COLOR TEMP menu. Then cover the entire CRT screen surface with a thick black blind cloth. Select the MANUAL adjustment item and adjust the white balance until the following value is obtained.
   x = 0.313
   y = 0.329
9. Select the SYSTEM/COLOR TEMP/COPY/OTHER VALUE menu.
10. After selecting the STD item of the COLOR TEMP menu, select D93. Copy the D93 color temperature data to STD.
11. After selecting the COLOR1 item of the COLOR TEMP menu, select D65. Copy the D65 color temperature data to COLOR1.
12. After selecting the COLOR2 item of the COLOR TEMP menu, select D93. Copy the D93 color temperature data to COLOR2.
13. Select VIDEO menu of the MAINTENANCE menu.
14. Return the SUB CONTRAST data to the original data.
15. Press the MONO button to the OFF position to cancel the B/W mode. [The green LED turns off.]

3.2 Sub Contrast Adjustment

1. Connect the 480/60i (525) 100 IRE WINDOW signal to the ANALOG Y/G input connector.
2. Attach the luminance meter to the center of the CRT screen.
3. Select STD using the COLOR TEMP menu of the INPUT CONFIG menu.
4. Select MAINTENANCE menu of the SYSTEM CONFIG menu.
5. Select SUB CONTRAST menu of the VIDEO menu.
6. Press the SHIFT ON button [to turn on the LED (orange) on top of the SHIFT button]. Press the 16:9 OFF button [to turn off the LED (orange)] to select the 4:3 mode.
7. Press the SHIFT OFF button [to turn off the LED (orange) on top of the SHIFT button].
   Press the UNDER SCAN button (▣) to its ON position to select the under scan mode. [The green LED turns off.]
8. Adjust SUB CONTRAST so that luminance becomes 120 cd/m^2.
9. Press the SHIFT ON button [to turn on the LED (orange) on top of the SHIFT button]. Press the 16:9 ON button [to turn on the LED (orange)] to select the 16:9 mode.
10. Adjust SUB CONTRAST so that luminance becomes 120 cd/m^2.
11. Press the SHIFT OFF button [to turn off the LED (orange) on top of the SHIFT button].
    Press the UNDER SCAN button (▣) to its ON position to select the under scan mode. [The green LED turns off.]
12. Adjust SUB CONTRAST so that luminance becomes 120 cd/m^2.
13. Press the UNDER SCAN button (▣) to its ON position to select the under scan mode. [The green LED turns off.]
14. Press the SHIFT ON button [to turn on the LED (orange) on top of the SHIFT button]. Press the 16:9 OFF button [to turn off the LED (orange)] to select the 4:3 mode.
15. Connect the 1080/60i 100 IRE WINDOW signal to the ANALOG Y/G input connector.
16. Adjust SUB CONTRAST so that luminance becomes 120 cd/m^2.
17. Press the SHIFT OFF button [to turn off the LED (orange) on top of the SHIFT button].
    Press the UNDER SCAN button (▣) to its ON position to select the under scan mode. [The green LED turns off.]
18. Adjust SUB CONTRAST so that luminance becomes 120 cd/m^2.
19. Press the UNDER SCAN button (▣) to its OFF position to select the normal mode. [The green LED turns on.]
20. Connect the 480/60p (525P) 100 IRE WINDOW signal to the ANALOG Y/G input connector.
21. Press the SHIFT ON button [to turn on the LED (orange) on top of the SHIFT button]. Press the 16:9 OFF button [to turn off the LED (orange)] to select the 4:3 mode.
22. Press the SHIFT OFF button [to turn off the LED (orange) on top of the SHIFT button].
    Press the UNDER SCAN button (▣) to its OFF position to select the normal mode. [The green LED turns on.]
23. Adjust SUB CONTRAST so that luminance becomes 120 cd/m^2.
24. Press the UNDER SCAN button (▣) to its OFF position to select the normal mode. [The green LED turns on.]
25. Adjust SUB CONTRAST so that luminance becomes 120 cd/m^2.
26. Press the UNDER SCAN button (▣) to its OFF position to select the normal mode. [The green LED turns on.]

3.3 White Balance Adjustment (2)

1. Connect the 480/60i (525) 20 IRE WINDOW color difference signal to the ANALOG Y/G input connector.
2. Select STD using the COLOR TEMP menu of the INPUT CONFIG menu.
3. Select MAINTENANCE menu of the SYSTEM CONFIG menu.
4. Select the VIDEO menu.
5. Increase the CHROMA control to its maximum.
6. Adjust white balance by adjusting the PR/R BLACK and PB/B BLACK menus of the VIDEO menu.
   x = 0.283
   y = 0.297

3.4 White Balance Adjustment (3)

1. Connect the 1080/60i (1125) 20 IRE WINDOW color difference signal to the ANALOG Y/G input connector.
2. Select STD using the COLOR TEMP menu of the INPUT CONFIG menu.
3. Select MAINTENANCE menu of the SYSTEM CONFIG menu.
4. Select the VIDEO menu.
5. Increase the CHROMA control to its maximum.
6. Adjust white balance by adjusting the PR/R BLACK and PB/B BLACK menus of the VIDEO menu.
   x = 0.283
   y = 0.297

3.5 White Balance Adjustment (4)

1. Turn off the main POWER switch.
2. Insert the BKM-142HD into the SLOT 2.
3. Connect the HD-SDI 20 IRE WINDOW signal to the BKM-142HD.
4. Turn on the main POWER switch.
5. Select HD-SDI using the FORMAT menu of the INPUT CONFIG menu.
6. Select MAINTENANCE menu of the SYSTEM CONFIG menu.
7. Select the VIDEO menu.
8. Increase the CHROMA control to its maximum.
9. Adjust white balance by adjusting the PR/R BLACK and PB/B BLACK menus of the VIDEO menu.
   x = 0.283
   y = 0.297

3.6 White Balance Adjustment (5)

1. Turn off the main POWER switch.
2. Insert the BKM-120D into the SLOT 2.
3. Connect the D1-SDI 20 IRE WINDOW signal to the BKM-120D.
4. Turn on the main POWER switch.
5. Select D1-SDI using the FORMAT menu of the INPUT CONFIG menu.
6. Select MAINTENANCE menu of the SYSTEM CONFIG menu.
7. Select the VIDEO menu.
8. Increase the CHROMA control to its maximum.
9. Adjust white balance by adjusting the PR/R BLACK and PB/B BLACK menus of the VIDEO menu.
   x = 0.283
   y = 0.297

3.7 White Balance Adjustment (6)

1. Turn off the main POWER switch.
2. Insert the BKM-127W into the SLOT 2.
3. Connect the NTSC 20 IRE WINDOW signal to the BKM-127W.
4. Turn on the main POWER switch.
5. Select NTSC, PAL using the FORMAT menu of the INPUT CONFIG menu.
6. Select MAINTENANCE menu of the SYSTEM CONFIG menu.
7. Select the VIDEO menu.
8. Increase the CHROMA control to its maximum.
9. Adjust white balance by adjusting the PR/R BLACK and PB/B BLACK menus of the VIDEO menu.
   x = 0.283
   y = 0.297

Section 4
Safety Related Adjustments

This section describes the adjustment procedure that is required when the safety related parts are replaced.

[Preparation]

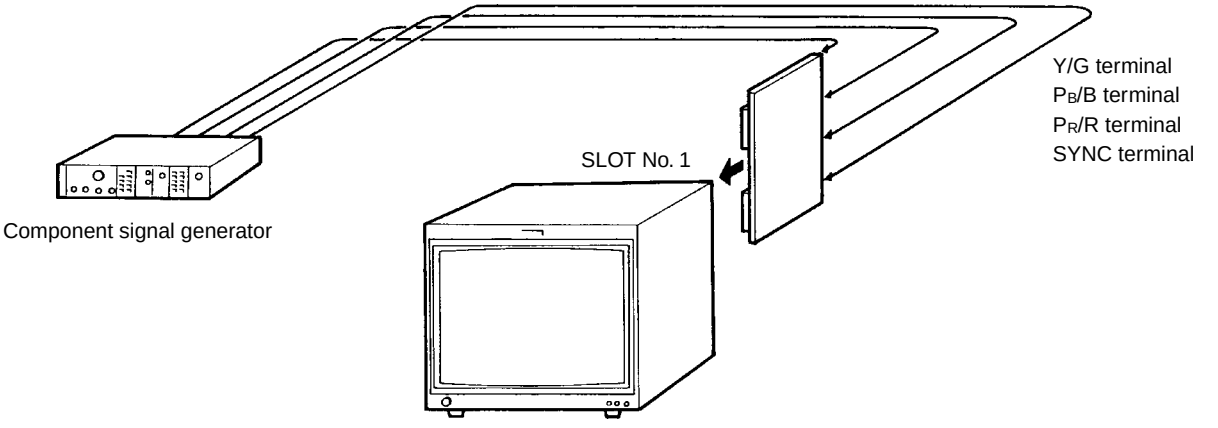
• Required tools and measuring equipment

1. Signal generator
   YPB/YPR signal generator
   • 1080/60i (1125) : SMPTE 274M standard
   • 480/60i (525) : ITU601 (Refer to page 1-29)
2. Electrostatic voltmeter: Singer ESH-27X or ESH-23X or equivalent
3. Digital voltmeter
4. 200 kΩ variable resistor
5. 20 kΩ variable resistor
6. Ammeter

• Set the INPUT CONFIGURATION menu

Set the INPUT CONFIGURATION menu of the SETUP menu as shown below unless otherwise specified.

FORMAT ..... YPBPR
SLOT NO 1
INPUT NO 1
SYNC MODE ..... INT
APEARTURE VALUE 100
CHANNEL NAME ..... PROG
COLOR TEMP ..... STD
H PHASE 000
MARKER PHASE 000
MARKER WIDTH 000



BVM-D14H1U/D14H5U/D14H1E/D14H5E/D14H1A/D14H5A

+B (135 V) Voltage Check

1. Connect a digital voltmeter across C645 on the G board.
2. Turn on the main power.
3. Connect the 1080/60i 100 IRE signal (see note) to input connector.
   Note: 1125 (1080) 100 IRE signal
4. Push the BRIGHTNESS and CONTRAST buttons to their MANUAL positions (to turn the green LEDs on the buttons.)
5. Set the BRIGHTNESS and CONTRAST buttons to their MAX positions.
6. Check that the following DC voltage appears.
   135.0 ± 0.8 V
7. Turn off the main power.
8. Disconnect the digital voltmeter.

High Voltage Regulator Check

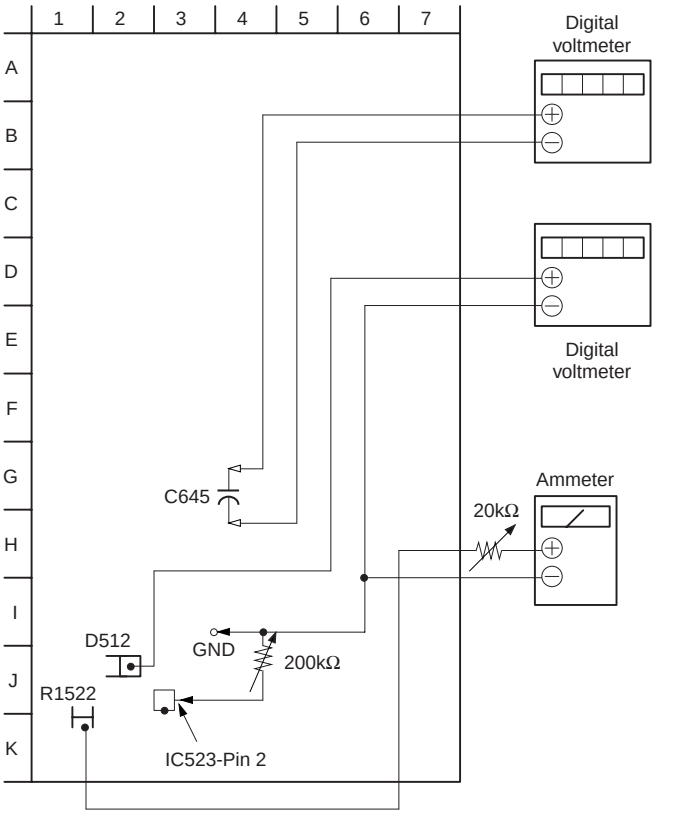
When the following parts (the parts to which the ◪ mark is attached on the schematic diagram) are replaced, be sure to perform the following checks.

◪ G board IC515, IC519, IC520, T502, R1509, R1514, R1576, R1577, R592, R593, R599

1. Turn off the main power.
2. Connect an electrostatic voltmeter to the anode cap of CRT tube.
   - Electrostatic voltmeter: It must have already been calibrated to have the input impedance of 2×10^9 Ω or more. Singer ESH-27X or ESH-23X or equivalent
3. Turn on the main power.
4. Connect the 1080/60i monoscope signal (see note) to input connector.
   Note: 1125 (1080) monoscope signal
5. Push the BRIGHTNESS and CONTRAST buttons to their MANUAL positions (to turn the green LEDs on the buttons.)
6. Set the BRIGHTNESS and CONTRAST buttons to their mechanical center positions.
7. Check that the following high voltage appears.
   22.5 ± 1.0 kV
8. Turn off the main power.
9. Disconnect the electrostatic voltmeter.

[Connection]

G board (Side B)



http://getMANUAL.com

High Voltage Hold-Down Check

When the following parts (the parts to which the ◪ mark is attached on the schematic diagram) are replaced, be sure to perform the following checks.

◪ G board IC514, IC507, IC523, Q520, D506, D513, D535, T502, R553, R560, R561, R569, R575, R597, R1566, R512

1. Turn off the main power.
2. Connect a digital voltmeter between D513 cathode and GND of G board.
3. Connect a 200 kΩ variable resistor between IC523 pin-2 and GND of the G board.
   [Adjust the 200 kΩ variable resistor to its maximum resistance value.]
5. Connect the 480/60i entire black signal (see note) to input connector.
   Note: NTSC entire black signal
6. Push the BRIGHTNESS and CONTRAST buttons to their MANUAL positions (to turn the green LEDs on the buttons.)
7. Set the BRIGHTNESS and CONTRAST buttons to their MIN positions.
8. Confirm that the raster disappears from the CRT screen when the DC voltage at D513 cathode reaches the following voltage as the 200 kΩ variable resistor is turned to decrease its resistance value gradually.
   25.5 ± 1.0 V
9. Turn off the main power.
10. Remove the 200 kΩ variable resistor that is connected to IC523 pin-2.
11. Turn on the main power.
12. Confirm that the DC voltage at D513 cathode is as follows.
    20.0 ± 1.5 V
13. Connect the 480/60i entire white signal to input connector.
14. Set the BRIGHTNESS and CONTRAST buttons to their MAXIMUM positions.
15. Confirm that the DC voltage at TP505 is as follows.
    22.0 ± 2.0 V
16. Disconnect the digital voltmeter.

Beam Current Protector Check

When the following parts (the parts to which the ◪ mark is attached on the schematic diagram) are replaced, be sure to perform the following checks.

◪ G board IC507, IC517, IC523, Q520, D507, D535, T502, R1516, R1517, R1518, R1521, R1522, R1523, R1566, R1569, R512, R562, R576, R578, R579, R580, R586

1. Turn off the main power.
2. Connect a DC ammeter and a 20 kΩ variable resistor in series between the junction point of R1522 and R1523, and GND on the G board
   [The junction point of R1522 and R1523 is the positive (+) side. Adjust the 20 kΩ variable resistor to its maximum resistance beforehand.]
3. Turn on the main power.
4. Connect the 480/60i entire black signal (see note) to input connector.
   Note: NTSC entire black signal
5. Push the BRIGHTNESS and CONTRAST buttons to their MANUAL positions (to turn the green LEDs on the buttons.)
6. Set the BRIGHTNESS and CONTRAST buttons to their mechanical center positions.
7. Confirm that the raster disappears from the CRT screen when the DC ammeter reaches the following value as the 20 kΩ variable resistor is turned to decrease its resistance value gradually.
   1600 µA
8. Turn off the main power.
9. Remove a 20 kΩ variable resistor and a DC ammeter.

Section 5
Circuit Adjustments

5-1. B Board Adjustments

This section describes the following adjustments that are required when the parts are replaced or maintenance is performed in the B board.

1. RGB signal adjustment
2. 15k YPBPR SMPTE (709) signal adjustment
3. 15k YPBPR SMPTE (601) signal adjustment
4. 15k YPBPR BETACAM SETUP 0 (601) signal adjustment
5. 15k YPBPR BETACAM SETUP 7.5 (601) signal adjustment
6. 33k YPBPR SMPTE (709) Signal Adjustment

Control Settings

- Set the INPUT CONFIGURATION menu of the SETUP menu as shown below.
  FRMAT ..... YPBPR
  SLOT NOT 1
  INPUT NOT 1

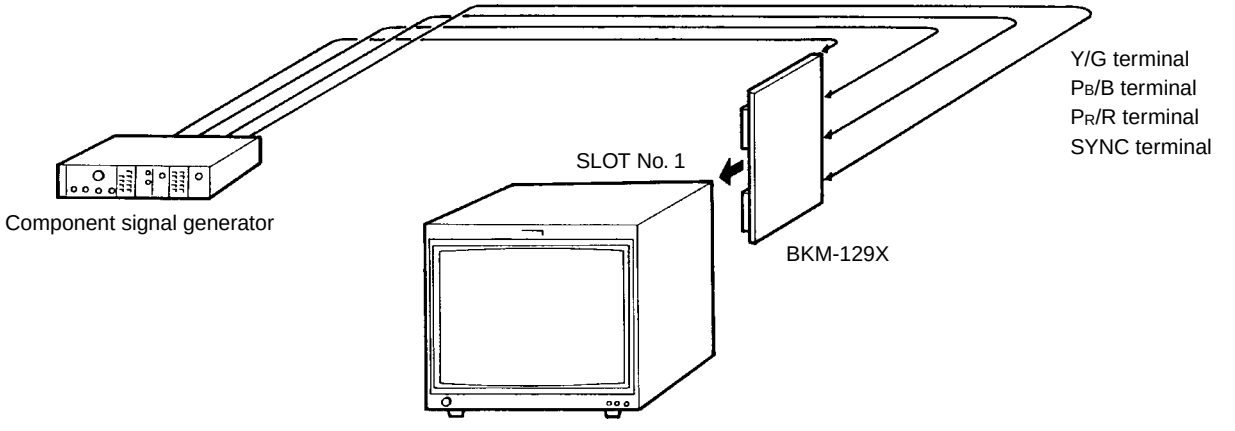
- Set “128” to the CHROMA data using the CHROMA control knob.

- Perform the following operaion using the SYSTEM CONFIG menu.
  Select the B BOARD using the RE-LOAD FACTORY DATA of the SYSTEM menu.

Equipment Required

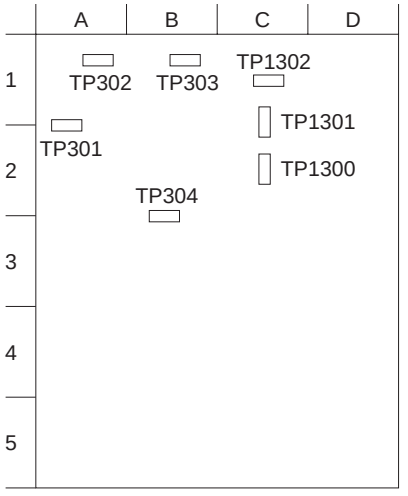
Name	Main Specifications	Model Name
Signal generator	15 kHz/60 Hz RGB	VG-854 or equivalent
	15 kHz/60 Hz YPBPR SMPTE (709)	
	15 kHz/60 Hz YPBPR SMPTE (601)	
	15 kHz/60 Hz YPBPR BETACAM SETUP 7.5 (601)	
	33 kHz/60 Hz YPBPR SMPTE (709)	
Oscilloscope	Frequency: DC to 150 MHz or more	TEKTORONIX 2445A
	Dual trace	or equivalent

Connection (1)



BVM-D14H1U/D14H5U/D114H1E/D14H5E/D14H1A/D14H5A

Connection (2)



B board -side A-

Adjustment Procedure

1. RGB Signal Adjustment

Status During Adjustment	Specifications	Adjustment Point
Step 1 • Input the 15 kHz/60 Hz RGB 100% color bar signal. • Use the FORMAT item of the INPUT CONFIG menu to select RGB. • Connect an oscilloscope to TP302.	Adjust the GREEN waveforms to have the same amplitude at TP302. Level difference: 0 ±10 mV 	Use the adjustment menu Y/G BLACK (40H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 2 • Connect an oscilloscope to TP303.	Make flat the pedestal portion of the BLUE waveform at TP303. Level difference: 0 ±10 mV 	Use the adjustment menu PB/B BLACK (30H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 3 • Connect an oscilloscope to TP304.	Make flat the pedestal portion of the RED waveform at TP304. Level difference: 0 ±10 mV 	Use the adjustment menu PR/R BLACK (20H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.

2. 15k YPBPR SMPTE (709) Signal Adjustment

2-1. BLACK Level Adjustment

Status During Adjustment	Specifications	Adjustment Point
Step 1 • Input the 15 kHz/60 Hz YPBPR SMPTE (709) 100% color bar signal. • Use the FORMAT item of the INPUT CONFIG menu to select YPBPR SMPTE. Set 709 for YPBPR MATRIX. • Connect an oscilloscope to TP302.	Make flat the pedestal portion of the Y-signal waveform at TP302. Level difference: 0 ± 10 mV 	Use the adjustment menu Y/G BLACK (41H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 2 • Connect an oscilloscope to TP303.	Make flat the pedestal portion of the PB waveform at TP303. Level difference: 0 ± 10 mV 	Use the adjustment menu PB/B BLACK (32H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 3 • Connect an oscilloscope to TP304.	Make flat the pedestal portion of the PR waveform at TP304. Level difference: 0 ± 10 mV 	Use the adjustment menu PR/R BLACK (22H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.

2-2. CHROMA Leak Adjustment

Status During Adjustment	Specifications	Adjustment Point
Step 1 • Input the 15 kHz/60 Hz YPBPR SMPTE (709) 100% color bar signal. • Use the FORMAT item of the INPUT CONFIG menu to select YPBPR SMPTE. Set 709 for YPBPR MATRIX. • Use the CHROMA knob to set “0” to the CHROMA data. • Connect an oscilloscope to TP303.	Make flat the PB waveform at TP303. Level difference: 0 ± 20 mV  Make the signal amplitude as flat as possible.	Use the adjustment menu CHROMA PB (11H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 2 • Connect an oscilloscope to TP304.	Make flat the PR waveform at TP304. Level difference: 0 ± 20 mV  Make the signal amplitude as flat as possible.	Use the adjustment menu CHROMA PR (10H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 3 • Set “128” to the CHROMA data using the CHROMA control knob.		

2-3. MATRIX Adjustment

Status During Adjustment	Specifications	Adjustment Point
Step 1 • Input the 15 kHz/60 Hz YPBPR SMPTE (709) 100% color bar signal. • Use the FORMAT item of the INPUT CONFIG menu to select YPBPR SMPTE. Set 709 for YPBPR MATRIX. • Connect an oscilloscope to TP1301.	GREEN waveform amplitude at TP1301: 560 ± 20 mVp-p 	Use the adjustment menu Y LEVEL (50H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 2 • Connect an oscilloscope to TP1300.	Adjust the RED waveforms to have the same amplitude at TP1300. Level difference: 0 ± 20 mV 	Use the adjustment menu PR LEVEL (60H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 3 • Connect an oscilloscope to TP1302.	Adjust the BLUE waveforms to have the same amplitude at TP1302. Level difference: 0 ± 20 mV 	Use the adjustment menu PB LEVEL (80H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 4 • Connect an oscilloscope to TP1301.	Make flat the GREEN waveform at TP1301 Level difference: 0 ± 20 mV 	Use the adjustment menu G-Y/R (70H) and G-Y/B (90H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.

3. 15k YPBPR SMPTE (601) Signal Adjustment

Status During Adjustment	Specifications	Adjustment Point
Step 1 • Input the 15 kHz/60 Hz YPBPR SMPTE (601) 100% color bar signal. • Use the FORMAT item of the INPUT CONFIG menu to select YPBPR SMPTE. Set 601 for YPBPR MATRIX. • Connect an oscilloscope to TP1301.	GREEN waveform amplitude at TP1301: 560 ± 20 mVp-p 	Use the adjustment menu Y LEVEL (51H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 2 • Connect an oscilloscope to TP1300.	Adjust the RED waveforms to have the same amplitude at TP1300. Level difference: 0 ± 20 mV 	Use the adjustment menu PR LEVEL (62H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 3 • Connect an oscilloscope to TP1302	Adjust the BLUE waveforms to have the same amplitude at TP1302. Level difference: 0 ± 20 mV 	Use the adjustment menu PB LEVEL (82H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 4 • Connect an oscilloscope to TP1301.	Make flat the GREEN waveform at TP1301 : Level difference: 0 ± 20 mV 	Use the adjustment menu G-Y/R (71H) and G-Y/B (91H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.

4. 15k YPBPR BETACAM SETUP 0 (601) Signal Adjustment

Status During Adjustment	Specifications	Adjustment Point
Step 1 • Input the 15 kHz/60 Hz YPBPR BETACAM SETUP 0 (601) 75% color bar signal. • Use the FORMAT item of the INPUT CONFIG menu to select YPBPR BETA 0. • Connect an oscilloscope to TP1301.	GREEN waveform amplitude at TP1301: 560 ± 20 mVp-p 	Use the adjustment menu Y LEVEL (52H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 2 • Connect an oscilloscope to TP1300.	Adjust the RED waveforms to have the same amplitude at TP1300. Level difference: 0 ± 20 mV 	Use the adjustment menu PR LEVEL (64H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 3 • Connect an oscilloscope to TP1302.	Adjust the BLUE waveforms to have the same amplitude at TP1302. Level difference: 0 ± 20 mV 	Use the adjustment menu PB LEVEL (84H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 4 • Connect an oscilloscope to TP1301.	Make flat the GREEN waveform at TP1301. Amplitude between YELLOW and pedestal: 420 ± 20 mVp-p Make flat the waveform: Level difference: 0 ± 20 mV 	Use the adjustment menu G-Y/R (72H) and G-Y/B (92H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.

5. 15k YPBPR BETACAM SETUP 7.5 (601) Signal Adjustment

Status During Adjustment	Specifications	Adjustment Point
Step 1 • Input the 15 kHz/60 Hz YPBPR BETACAM SETUP 7.5 (601) 75% color bar signal. • Use the FORMAT item of the INPUT CONFIG menu to select YPBPR BETA 7.5. • Connect an oscilloscope to TP302.	Make flat the pedestal portion of the Y-signal waveform at TP302. Level difference: 0 ± 10 mV 	Use the adjustment menu Y/G BLACK (42H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 2 • Connect an oscilloscope to TP1301.	GREEN waveform amplitude at TP1301: 560 ± 20 mVp-p 	Use the adjustment menu Y LEVEL (53H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 3 • Connect an oscilloscope to TP1300.	Adjust the RED waveforms to have the same amplitude at TP1300. Level difference: 0 ± 20 mV 	Use the adjustment menu PR LEVEL (65H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 4 • Connect an oscilloscope to TP1302.	Adjust the BLUE waveforms to have the same amplitude at TP1302. Level difference: 0 ± 20 mV 	Use the adjustment menu PB LEVEL (85H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 5 • Connect an oscilloscope to TP1301.	Make flat the GREEN waveform at TP1301. Amplitude between YELLOW and pedestal: 420 ± 20 mVp-p Make flat the waveform: Level difference: 0 ± 20 mV 	Use the adjustment menu G-Y/R (73H) and G-Y/B (93H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.

6. 33k YPBPR SMPTE (709) Signal Adjustment

Status During Adjustment	Specifications	Adjustment Point
Step 1 • Input the 33 kHz/60 Hz YPBPR SMPTE (709) 100% color bar signal. • Use the FORMAT item of the INPUT CONFIG menu to select YPBPR SMPTE. • Connect an oscilloscope to TP303.	Make flat the PB waveform at TP303. Level difference: 0 ± 10 mV 	Use the adjustment menu PB/B BLACK (33H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 2 • Connect an oscilloscope to TP304.	Make flat the PR waveform at TP304. Level difference: 0 ± 10 mV 	Use the adjustment menu PR/R BLACK (23H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 3 • Connect an oscilloscope to TP1301.	Check amplitude of the GREEN waveform at TP1301: 560 ± 20 mVp-p 	
Step 4 • Connect an oscilloscope to TP1300.	Adjust the RED waveforms to have the same amplitude at TP1300. Level difference: 0 ± 20 mV 	Use the adjustment menu PR LEVEL (61H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.
Step 5 • Connect an oscilloscope to TP1302.	Adjust the BLUE waveforms to have the same amplitude at TP1302. Level difference: 0 ± 20 mV 	Use the adjustment menu PB LEVEL (81H) that is located under the directory of the VIDEO menu of the MAINTENANCE menu.

http://getMANUAL.com

Section 6
Circuit Descriptions

This section describes the circuit operations of the following boards used in the BVM-D14H1J/D14H5J.

6-1. G board
6-2. G1 board
6-3. B board
6-4. C board
6-5. MA board
6-6. MB board

6-1. G Board

Power Supply Circuit

Power supply of this monitor consists of the following two switching regulators.

1. The power factor improvement regulator that is used to comply with the power supply high frequency harmonics regulations.
2. The main regulator that supplies the power to the signal system, the deflection circuit and high voltage circuit.

1. Power Factor Improvement Circuit

The power factor improvement block
The power factor improvement circuit of this monitor uses the active filter IC module (IC601) of the current-threshold type boost-chopper system to comply with the power supply high frequency harmonics regulations.
The power factor improvement circuit consists of IC601, T603 and C615.

IC601 is a module IC in which the control IC, the switching FET, the boost diode and input/output voltage detectors are built in.
Basic operation of the power factor improvement block is as follows. When the POWER signal (IC508 pin-1 output) goes "LOW" and the Vcc power is supplied to IC601, the FET inside the module IC601 is turned on and an electric current starts to flow in the primary winding of T603 and the FET. This current increases with the slope of Vin (rms)/L where L is the primary side inductance of T603. This FET current is monitored by the source current detection resistor that is connected between pin-4 and pin-7 of IC601. When this FET current reaches the set value that is specified by the multiplier inside the control IC, the FET is turned off. Then an electric current flows through the boost diode where the current decreases with the slope of -(Vd - Vin (rms))/L. When this current reaches 0, the FET is turned on.
The current-threshold operation is thus realized by the above described circuit operations. (Vd: Voltage across C615. Vin: Input voltage to power supply)
In other words, the circuit operations that are described, are performed as one-operation-cycle all the time while the power is on. When you observe the circuit operations as described above, during only the half-wave period of commercial power line frequency, you will notice that ON/OFF timing of the FET is controlled by the control IC so that the envelope of the peak values of the choke current is proportional to the half-wave of the sine waveform of the power line frequency. As the result of this control, waveform of the input voltage and that of the output voltage become similar so that the power factor is improved. At the same time, the voltage Vd across C615 becomes higher than the peak value of the input voltage to the power circuit. The voltage Vd is set to about 380 V regardless of the input voltage to the power circuit.
This circuit does not operate during the standby mode. When this circuit is not operating, the voltage Vd becomes almost equal to the peak value of the input voltage to the power supply circuit.

2. Main Regulator

The separately excited current composite resonance system is used for the main regulator. The main regulator consists mainly of IC602, IC610, T605, C629, C631 and the secondary side rectifier circuit of T605. IC602 is a multiple chip module in which the four chips of the control block, the FET drive block and the switching FET block (high side and low side) are connected by bonding wire inside the IC. IC210 has the following circuit configuration. A half-bridge rectifier is constructed by the two FET switches, the two capacitors C629 and C631, and the transformer T605 for the input voltage Vd. The secondary side of the transformer has the half wave rectifiers and full wave rectifiers for each output lines.
IC602 receives the control signal from IC610 that performs the constant voltage control over the +135 V line through the isolator PH603. The control signal changes the oscillating frequency of IC602 so that the constant voltage control is realized.
The secondary side of T605 generates not only +135 V but also +160 V, +15 V, −15 V, +6 V, −6 V powers and the heater voltage that are required by the respective circuits. The +15 V, −15 V, +6 V, −6 V powers are regulated to +12 V, −12 V, +5 V, −5 V powers by the three-terminal regulators respectively so that these powers are supplied to each circuit board.

3. Over-Voltage Protection and Over-Current Protection Circuit

The +135 V voltage line of the main power supply has the over-voltage protection circuit and the over-current protection circuit that protect the power supply circuit and the loads when an abnormality occurs in the respective loads and in the voltage feedback system.
When an over-current occurs, the latch circuit consisting of Q616 and Q617 is turned on so that the VCC power to IC601 and IC602 is turned off through the isolator PH604 to stop operation of the main power supply circuit.
This protection circuit is released when the input power to the main power supply circuit is turned off once or when the standby mode is selected.

Deflection and High Voltage Circuit

1. Sync Signal and Deflection Signal Processing Circuit

The horizontal and vertical sync signals that are input from CN501 (pins-1/-2) are sent to the H/V DELAY timing circuit consisting of IC510, IC522, IC509 and IC526. The H/V DELAY timing circuit outputs the sync signals that have the same phase as those of the input signal during normal operation. However, during the H/V DELAY mode, it outputs the delayed sync signals to which delay is given by IC509 and IC510. The output sync signals are processed of the waveforms by IC503 and are sent to the deflection signal processor IC507.
The deflection signal processor IC507 outputs the various signals that are required for deflection, such as horizontal drive circuit, parabola signal for dynamic focusing, parabola signal for picture distortion correction, vertical drive signal and H/V blanking signals. The output signals are controlled directly by the microprocessor in the MA board through I2C bus.
The horizontal free-running frequency is set for about 18 kHz. The pull-in range of the input signal frequency is from 15 kHz to 45 kHz.
The deflection signal processor IC507 has the built-in protector for X-ray protection. When its pin-15 is raised to 8 V or higher, the X-ray protection circuit starts working to stop the horizontal and vertical outputs. The X-ray protector circuit can be reset by turning off the main power once then back on, or by entering the standby mode.
There can be a case that the monitor receives the non-standard TV signal such as the output signal from VTR. In order to reduce the skew effect on screen caused by irregular timing of the input sync signal, the PLL circuit inside the IC507 is stopped during the vertical blanking period.
This function is effective when the horizontal frequency of the input signal is 15 kHz (NTSC and PAL).
Because this circuit produces an ill effect when the standard TV signal is input, use or not-use of this circuit can be selected from the on-screen menu.

2. PWM Control Circuit for +B Power Voltages for Horizontal Deflection and of High Voltage

The PWM control circuit for +B power voltage consists of IC515 and its peripheral circuit. The horizontal drive signal that is output from IC507 pin-21 is used as the PWM trigger signal.
The PWM control for horizontal deflection system is performed by inputting the deflection distortion correction signal that is output from IC507 pin-31 to which the H. size control DC voltage super-imposed, to IC515 pin-8. On the other hand, the horizontal signal that is fed back from the horizontal output circuit is inputted to IC515 pin-7. These two input signals are compared and the error signal between them, that is the PWM control signal is output from IC515 pin-11. The PWM control output signal is sent to the +B regulator circuit consisting of Q2503 and its peripheral circuit that control the H. size and the deflection distortion correction.
The PWM control for the high voltage circuit is performed by inputting the reference signal generated by IC519, to IC515 pin-16 that is compared with the FBT high voltage detected voltage that is input to IC515 pin-17. The error signal between them, that is the PWM control signal is output from IC515 pin-13. The PWM control output signal is sent to the +B regulator circuit consisting of Q514 and its peripheral circuit that control the high voltage to be supplied to CRT.
The PWM control signal that is output from IC515 receives the DTC (Dead Time Control) in order to protect the horizontal output circuit and the high voltage output circuit from damage caused by the sharp change of frequency of the input video signal. The DTC circuit works as follows. When frequency of the input sync signal is changed, the unlock signal that is output from IC507 pin-37 is sent to IC507 pin-6 as the DTC signal input via the switches Q523 and Q504, so that the PWM is controlled to decrease the +B regulator output voltages to be supplied to the horizontal and high voltage systems.

3. Horizontal Output Circuit

The horizontal drive signal that is output form IC507 pin-21 is amplified by the horizontal drive circuit consisting of Q2501, Q2502, Q2505 and their peripheral circuit. The horizontal drive signal then drives T2502 (HDT) and Q2508 (H. OUT). The H. pulse is induced by the resonance between the capacitors C2528, C2530, C2531 and theH. winding impedance.

The H. pulse is voltage-divided, wave-shaped by IC2501 and its peripheral circuit, and is sent to IC507 pin-6, the B board and the MA board.
Amplitude of the horizontal deflection current is detected by T2503, Q2513 and their peripheral circuit. The detected amplitude is fed back to the PWM control circuit.
Multiple S-shape correction capacitors are prepared, and are selected by Q2514, Q2515, Q2516, Q2517, Q2518 and Q2519. The S-shape correction capacitors are switched at the following three points of horizontal frequencies: Horizontal frequency of 15 kHz, H. frequency in the range of 27 to 33.75 kHz and H. frequency in the range of 37 to 45 kHz. The horizontal linearity correction coils are switched by the relay RY2501 when the H. frequency of 15 kHz is input.
The H. centering circuit consists of IC2502, IC2504 and Q2504. The H. center position is controlled by amplifying the H. CENT. DC signal that is supplied from IC508 (D/A) and by super-imposing the DC current to the horizontal deflection current. As to the power supply for IC2504, the secondary winding of T2501 (HOT) is used so that a floating power supply is realized.

4. Vertical Output Circuit

The vertical output circuit consists of IC2503 and its peripheral circuit.
The vertical output signal is generated by inputting the V. drive signal that is output form IC507 pin-29, to IC2503 pin-1 where it is amplified. The V. center position is controlled by inputting the V. DC signal that is supplied from IC507 pin-28, to IC2503 pin-7. The vertical deflection amplitude and the vertical center position are controlled by IC507.
The vertical feedback pulse is generated by wave-shaping the V. flyback pulse with R2570, R2571 and D2520, and by inputting it to IC507 pin-30.

5. High Voltage Output Circuit

The HV drive signal that is output from IC515 pin-23 is sent to the high voltage output circuit consisting of Q506, Q507, Q513 (HV. OUT) and their peripheral circuit where the flyback pulse is generated by resonance. The flyback pulse is not only supplied to T502 (FBT) but also rectified, smoothed out by D520 and C578 so that the rectified high voltage is supplied to the C board as the G2 voltage.
Amplitude of the high voltage is voltage-divided by the high voltage resistors inside the FBT, and is output from T502 pin-14. The detected output of the high voltage is again voltage-divided by IC520, R1509, R1576 and R1577 so that it is sent to the PWM control signal as the high voltage feedback voltage.

6. Dynamic Focus Output Circuit

The H. focus signal that is output from IC507 pin-17 is amplified by the H. focus amplifier consisting of Q510, Q511, Q512 and the peripheral circuit. The H. focus signal then drives T501 (DFT) where it is amplified to about 500 V and is supplied to T502 pin-17. The H. focus signal interferes with the white balance reference pulse inside the CRT and produces an ill effect. In order to prevent occurrence of the ill effect, the H. focus signal is of a constant voltage is used during the vertical blanking period instead of the H. parabola signal. This switching is performed by IC516, IC524 and the peripheral circuit.
The V. focus signal that is output from IC507 pin-32 is amplified by the V. focus amplifier consisting of Q517, Q518 and the peripheral circuit. The V. focus signal is amplified to about 200 V and is supplied to T502 pin-18.

7. H/V Blanking Circuit

The H/V blanking circuit consists of IC501, IC527, IC509 and the peripheral circuit. Timing of the H. blanking signal is determined by the timing reference signal. The H. SAW signal that is output from IC507 pin-16 is used as the timing reference signal for the H. blanking. IC501 determines the start position of the H. blanking and IC509 determines the end position of the H. blanking.
The V. blanking circuit consists of IC502, IC528, IC510 and the peripheral circuit. The V. SAW signal that is output from IC507 pin-29 is used as the timing reference signal for the V. blanking. IC502 determines the start position of the V. blanking and IC510 determines the end position of the V. blanking.
Timing control of the H/V blanking signal is performed using the control voltage that is output from IC512 (DA).

8. Protector Circuit

The H/V protector circuit consists of IC523, IC514 and the peripheral circuit. When the voltage that appears at T502 pin-6 (FBT tertiary winding) exceeds the reference voltage that is set by IC514, the internal protector circuit of IC507 is started up through D506. The operating point of the H/V protector circuit is set at about 27 kV of the high voltage output.
The ik protector circuit consists of IC517, IC523 and the peripheral circuit. The ABL current value is detected by R1521, R1522 and R1523. When the detected current value exceeds the reference voltage that is set by IC517, the internal protector circuit of IC507 is started up through D507. The operating point of the ik protector circuit is set at about 1500 μA of the ABL current.

6-2. G1 Board

The G1 board is the standby regulator circuit that supplies the standby power (STBY5V) for the control system devices (such as CPU).
The standby regulator consists mainly of IC601, IC1602, PH601, T1601 and D1606. IC1601 has the built-in switching FET, the PWM controller and protection circuit. The control terminal of IC1601 receives the control signal from IC1602 that performs the constant voltage control over the STBY5V line through the isolator PH601. The internal FET inside IC1601 is PWM-switched by the control signal so that the STBY5V output from the secondary winding of T1601 is stabilized.

1. Over-Voltage Protection and Over-Current Protection Circuit

The STBY5V line of the standby power supply have the over-voltage protection circuit that protects the power supply and the loads when an abnormality occurs in the voltage feedback system.
When the over-voltage is detected, the "LOW" signal is set to the control terminal of the latch circuit through the isolator PH602 so that the power supply is stopped by the latch circuit consisting of Q606 and Q607.
This protection circuit is released wen the input power is turned off that discharges the C615 voltage of the G board.
When an over-current is detected in the STBY5V line, the micro-fuse F1603 blows.

6-3. B Board

1. Clamp Circuit (1)

The signal that is selected by the option board is input to CN301.
IC300 (1/3) (analog switch) is turned ON by the Y-CLP-P pulse. As a result, the pedestal voltage of the Y/G signal is sampled-and-held. In IC303, the sampled-and-held voltage and the reference voltage (Y/G BLACK voltage) are compared so that the error voltage is used to control the bias current of the Y/G signal clamp amplifier (Q300 to Q302) so that the pedestal voltage of the Y/G signal is clamped to a fixed voltage.
The same clamp operation is performed for the PB/B and PR/R signals but the C-CLP-P pulse is used as the clamp pulse.

2. Matrix Circuit

The Y, R-Y and B-Y signals are converted to the R, G and B signals by the matrix circuit in the Y/PB/PR signal is being input.
IC306 is the Y-level adjustment amplifier. IC307 and IC308 are the chroma level adjustment amplifier. The R-signal is generated by adding the Y-signal to the R-Y signal that has passed IC400 (PR gain control amplifier).
The Y-signal is generated by adding the R-Y signal that has passed IC400 (PR gain control amplifier), the B-Y signal that has passed IC401 (PB gain control amplifier) and the Y-signal that is inverted and amplified by Q463.
The B-signal is generated by adding the Y-signal to the B-Y signal that has passed IC401 (PB gain control amplifier).

3. RGB Selector Switch

IC1300 (1/3), IC1302 (1/3) and IC1303 (1/3) are the selector switch selecting either the RGB signal or the YPBPR signal (matrix circuit). Output of the selector switch is R, G and B signals.

4. Clamp Circuit (2)

The R-signal is sampled-and-held by the timing pulse of the deflection system.
IC1305 compares the sampled R-signal with the reference signal. The error voltage controls the DC bias of the R-signal amplifier (Q1300 to Q1302) so that the pedestal level is kept to a constant DC level all the time. The same clamp operation is performed in the G and B signals in the same way.

5. OSD Insertion Circuit

The on-screen display of the R-signal is realized by inserting the OSD blanking with IC1300 (2/3) and by inserting the OSD with IC1304 (1/3). The WINDOW signal that is used during the AUTO W/B adjustment is created by the character generator, and uses the same signal line in the same way for character display. The same insertion operation is performed in the G and B signals in the same way.

6. CUT-OFF Circuit

CUT-OFF of the R-signal is performed by IC1304 (2/3, 3/3). The same cut-off operation is performed in the G and B signals in the same way.

7. CXA1739 Peripheral Circuit

The RGB signal is input during the normal operation and the color difference signal is input during the blue-only mode.
(The B-signal is input to the Y input connector.)
CXA1739 has the built-in auto cut-off loop. The auto cut-off reference pulse is inserted into every H. period in the order of R, G then B channels at the end of the V. BLKG period (during the 3H period immediately after the rise-up of the V. pulse that is supplied to pin-18) in the output signal from CXA1739. The return pulse of the reference pulse is buffered by Q1402 and input to IC1401 pin-25. The return pulse that is input to pin-25 is compared with the BIAS control voltage by the voltage comparator. The error signal from the comparator is used to shift the DC output voltage until the return pulse agrees with the adjustment voltage. This circuit operation is performed to prevent the changing of the cut-off level caused by the drift of CRT or of the drive circuit.
Q1431 to Q1434 in the R-signal output circuit remove the smear that occurs inside the IC.
The same circuit operation is performed in the G-channel and the B-channel too.

8. ABL Circuit

The ABL circuit consists of Q1460 for ABL and Q1461 for BRT ABL.
The ABL voltage from the deflection block is input the respective emitters of Q1460 and Q1461. The voltage-divided DC voltage of the ABL signal is input the respective bases of Q1460 and Q1461. Their collectors are connected to IC1401 pin-46 (PIC CONT) and pin-7 (BRT CONT) respectively. When these transistors are turned on, the ABL operation can be performed by decreasing their respective control voltages.

9. AUTO CHROMA PHASE

The signals that are output from IC1401 are selected by IC2380. Only the sample pulse portion of the selected signal is sampled by IC2381 and is compared with the output by IC2382. The error signal from the comparator is fed back to DAC through IC2383 and automatically controls the PB LEVEL or the R LEVEL until the output agrees with the sampled level.

10. B1 Board

The B1 board is an aperture correction circuit.
The aperture correction performs the frequency compensation at 5 MHz when the input signal is 480/60i and 575/501 with DL400/DL401. It performs the frequency compensation at 16 MHz when any other signals are input.
DL404 and DL405 are the delay lines that corrects the delay amount of the Y-signal. The PB and PR signals are corrected of their delay amounts by DL501, DL502, DL503 and DL504.
Amount of compensation can be varied by 2 to 6 dB when the APT is ON using the aperture correction amplifier.

11. Sync Separator Circuit/B2 Board

The sync separator circuit consists of the sync AGC circuit and the B2 board.
Either the input sync signal in the mode of 480/60i and 575/501 or that in any other modes, is selected by IC3301 (2/3), (3/3), Q3302 and Q3303. The sync signal is separated by the SYNC AGC circuit of Q3304 to Q3319.
Either INT sync or EXT sync is selected by IC3301.
In the B2 board, the equalizing pulses are extracted by IC3901, the H. sync pulse is separated by the H. SYNC SEP. circuit consisting of IC3904, IC3905, IC3906, IC3907 and the V. sync pulse is separated by the V. SYNC SEP. circuit consisting of Q3905, Q3907, Q3908.
The switch IC3902 is the selector switch that selects either the internal sync separator output or the already separated H. and V. sync signals that are input when the SDI signal is used.

6-4. C Board

The C board circuit is the CRT drive circuit.
The R-signal that is input to CN702 is amplified by about 25 dB and inverted by the cascaded amplifier consisting of Q730, Q732 and Q733, and is sent to the cathode.
This amplifier has the frequency compensation characteristics (peaking characteristics) by R733, C730, C776, R746 and L730. Q702 is the auto cut-off circuit that allows to flow the output pulse through R704 via Q735 when Q702 is ON.
The reference pulse that is current-to-voltage converted by R704, is input to IC1401 pin-25 through a buffer in the B board in order to activate the auto cut-off circuit.
The above-described circuit operations are applied to the G-signal and B-signal.

6-5. MA Board

1. System Control

IC106 (system control CPU) controls the monitor in accordance with the program that is installed in IC108 (flash EEPROM). The program in IC108 can be re-written by the boot loader program in IC106. Various settings are saved in the SRAM (IC111) that is backed up by battery.

2. Internal Bus inside Monitor

Most blocks of the deflection circuits and the signal circuits are controlled by the I2C bus that is driven by IC103 (5/6), (6/6). The I2C bus is controlled of its operation by controlling the general purpose port of IC106 by software.
IC112 is an expansion I/O unit that is used to control the internal bus and the TALLY LED.

3. Connection to Options

The respective option boards are controlled by IC101 (1/4), (2/4), (3/4), IC103 (1/6), (2/6), (3/6), (4/6) and IC104. The data communication with the option slot bus uses the strobe/hand-shake method using the SLOT ID signal. Data is transferred by MISO/MOSI/SCLK. The MISO/MOSI/SCLK signal is also used for communication between the MA board and the MB board.
IC112 is the RS-422 driver that establishes communication to read the key data or knob information of the internal controller or the control unit and to turn on/off the LED.

6-6. MB Board

1. Character Display and Internal Signal Generator

IC1107 is the character generator IC such as menu characters. IC1110 generates the 4:3 marker and the various signals for automatic adjustments.
Outputs of the two IC are mixed by IC1100 and is output.

2. Serial Communication Driver

IC1105 is the communication controller for the serial remote control. It performs the transmission and reception of the serial remote communication together with the RS-485 driver of IC1103 and IC1106.
IC1108 (communication controller) and IC1109 (RS-232 driver) performs the transmission and reception of the OPTION terminals.

3. Parallel Remote Control

IC1112 reads out the status of the parallel remote terminal and transfers it to the CPU in the MA board.

Electrical Parts List

NOTE :

The components identified marked ⚠ are critical for safety.
Replace only with the part number specified.

Les composants identifiés par la marque ⚠ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.

- Items marked " * " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.

RESISTORS
- All resistors are in ohms.
- F: nonflammable
- METAL: Metal-film resistor
- METAL OXIDE: Metal oxide-film resistor

Section 11
Diagrams

Note:

- Parts marked " * " differ according to the model/destination. Refer to the mount table for each function.
- The parts marked " # " on schematic diagrams are not mounted.
- All capacitors are in μF unless otherwise noted. pF: μμF 50WV or less are not indicated except for electrolytics.
- All electrolytics are in 50 V unless otherwise specified.
- : fusible resistor
- : nonflammable resistor
- Δ : internal component
- : panel designation and adjustment for repair
- Caution when replacing chip parts
  New parts must be attached after removal of the chip.
  Be careful not to heat the minus side of a tantalum capacitor, because it is easily damaged by the heat.

Reference information

RESISTOR	RN	: METAL FILM
	RC	: SOLID
	FPRD	: NONFLAMMABLE CARBON
	FUSE	: NONFLAMMABLE FUSIBLE
	RS	: NONFLAMMABLE METAL OXIDE
	RB	: NONFLAMMABLE CEMENT
	RW	: NONFLAMMABLE WIREWOUND
	※	: ADJUSTMENT RESISTOR
COIL	LF-8L	: MICRO INDUCTOR
CAPACITOR	TA	: TANTALUM
	PS	: STYROL
	PP	: POLYPROPYLENE
	PT	: MYLAR
	MPS	: METALIZED POLYESTER
	MPP	: METALIZED POLYPROPYLENE
	ALB	: BIPOLAR
	ALT	: HIGH TEMPERATURE
	ALR	: HIGH RIPPLE

- The components marked ⋈ in this schematic diagram have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation.
- When replacing components marked ◪ , make the necessary adjustments indicated. If results do not meet the specified value, change the component marked ⋈ and repeat the adjustment until the specified value is achieved.
- When replacing a part shown in the table below, be sure to perform the related adjustment.

[Measuring conditions, voltage and waveform]

- A voltage value is the reference value between the measurement point and the earth, when the RGB color bar signal is received (digital multi-meter used: 10 M ohms/V DC).
- Unit of voltage is V (volt).
- V : B+line
  V : B– line
- Voltage variations may occur due to normal production tolerances.
- RGB color bar signal.
- Circled numbers indicate the reference waveform.
- : Signal path.

The components identified marked ⚠ are critical for safety.
Replace only with the part number specified.

Les composants identifiés par la marque ⚠ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.

NOTE:
The circuit indicated as shown on the left contains high voltages of over 600 Vp-p. Take care to avoid electric shock during inspection or repair work.
